Since this service manual only describes the differences between the TK-240(F) and the TK-240 (B51-8055-00), see the TK-240 service manual as well.

For information on installing, setting, and adjusting the 5-TONE unit, and for circuit diagrams and PC board views, see the TK-240(F) service manual.

# TK-240(F)

## GENERAL

### INTRODUCTION

#### SCOPE OF THIS MANUAL

This manual is intended for use by experienced technicians familiar with similar types of commercial grade communications equipment. It contains all required service information for the equipment and is current as of the publication date. Changes which may occur after publication are covered by either Service Bulletins or Manual Revisions. These are issued as required.

#### ORDERING REPLACEMENT PARTS

When ordering replacement parts or equipment information, the full part identification number should be included. This applies to all parts : components, kits, or chassis. If the part number is not known, include the chassis or kit number of which it is a part, and a sufficient description of the required component for proper identification.

#### PERSONNEL SAFETY

The following precautions are recommended for personnel safety :

- DO NOT transmit until all RF connectors are verified secure and any open connectors are properly terminated.
- SHUT OFF and DO NOT operate this equipment near electrical blasting caps or in an explosive atmosphere.
- This equipment should be serviced by a qualified technician only.

#### SERVICE

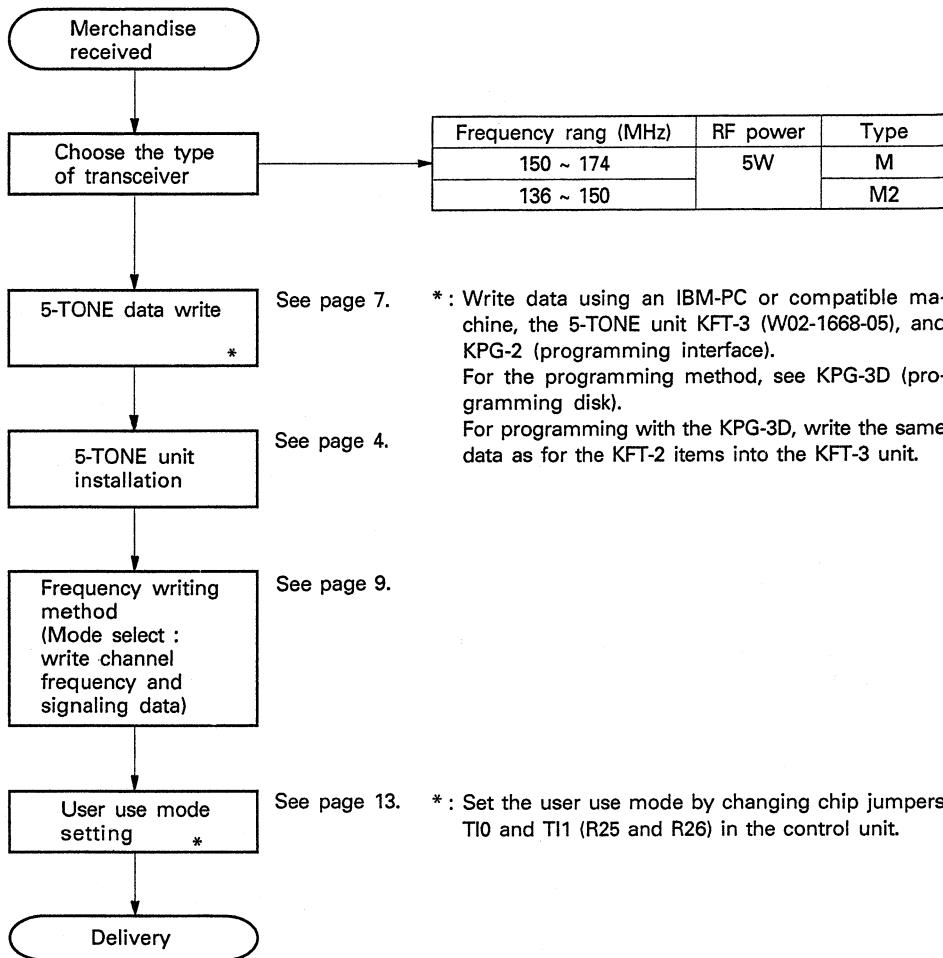

This radio is designed for easy servicing. Refer to the schematic diagrams, printed circuit board views, and alignment procedures contained within.

#### NOTE

WE CANNOT guarantee oscillator stability when using channel element manufactured by other than KENWOOD or its authorized agents.

Version	Frequency range	Remark	QT/CTCSS (Encode only)	Battery	Charger
M	150 ~ 174MHz	IF1 34.400MHz LOC 34.855MHz	○	OP	OP
M2	136 ~ 150MHz	IF1 30.825MHz LOC 30.370MHz	↑	↑	↑

## SYSTEM SET-UP

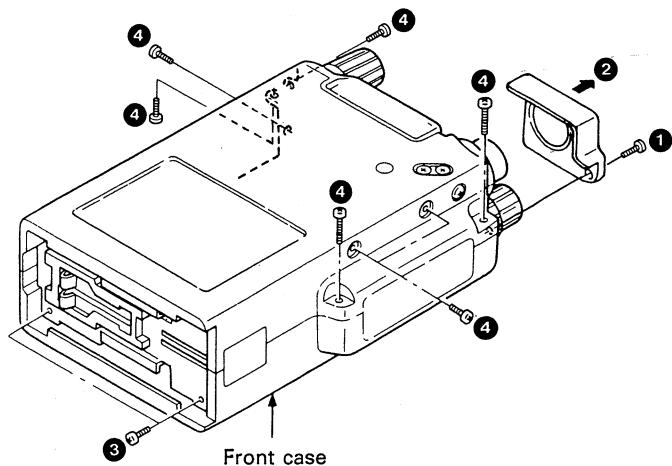

# TK-240(F)

## INSTALLATION

### 5-TONE Unit Installation Method (KFT-3)

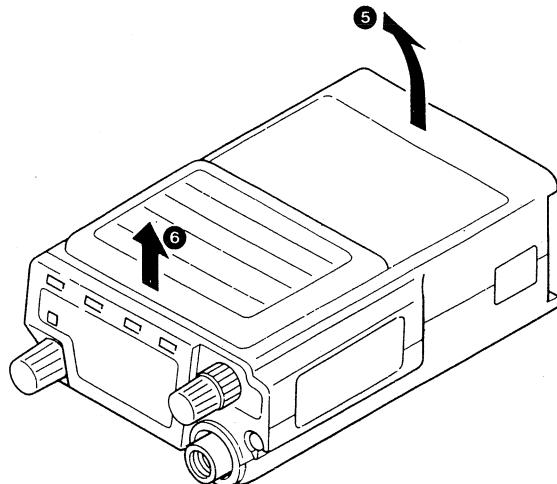

(5-TONE data must already have been written)

1. Remove the screw (①) holding the antenna connector rubber cap (②), and remove the rubber cap from the antenna connector.
2. Remove the two screws (③) at the front of the bottom plate, and remove the seven screws (④) on both sides of the cases.

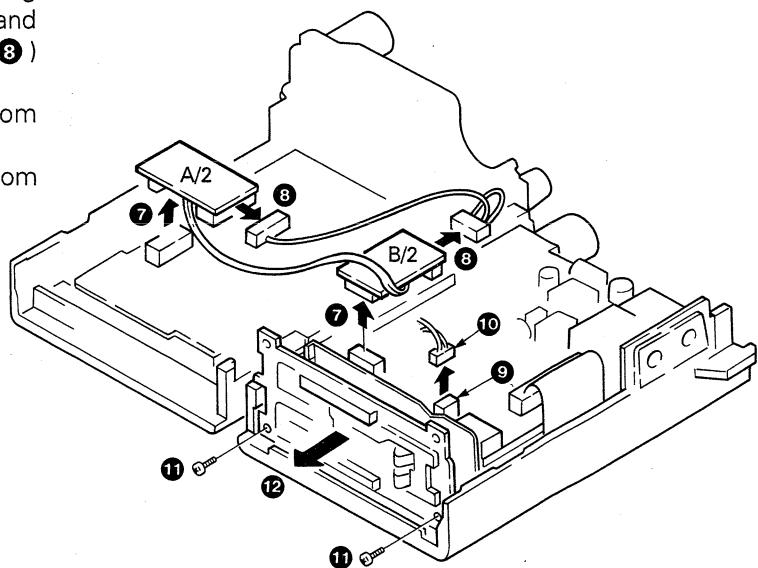

3. With the transceiver face up (⑥), lift the front half of the case at the bottom (⑤), and remove it.

**Note :** Use care when pulling (⑥) so the FPC cable in the front case is not cut.

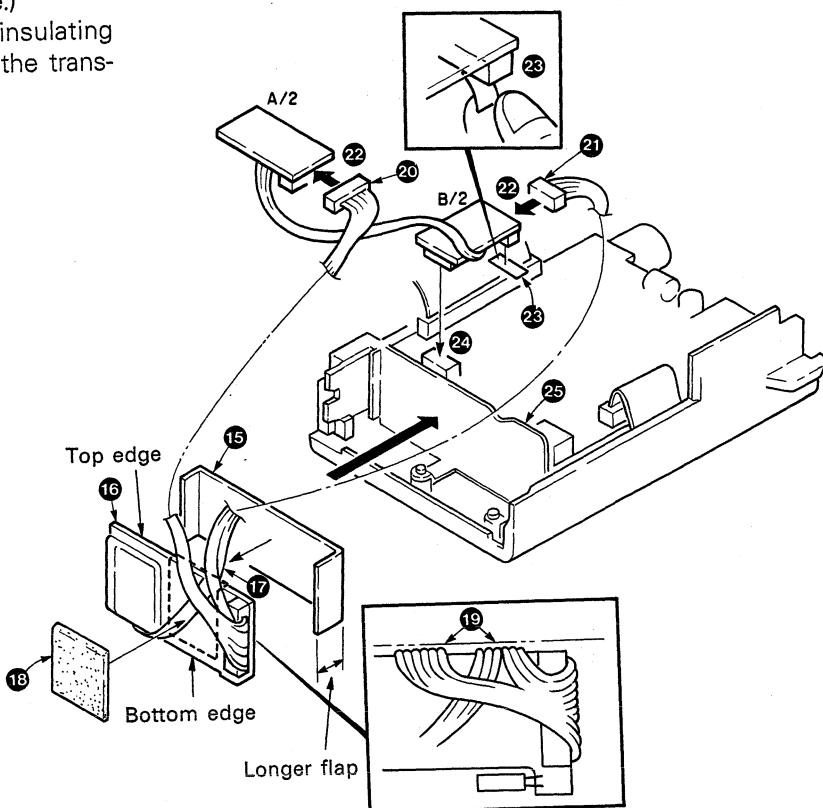

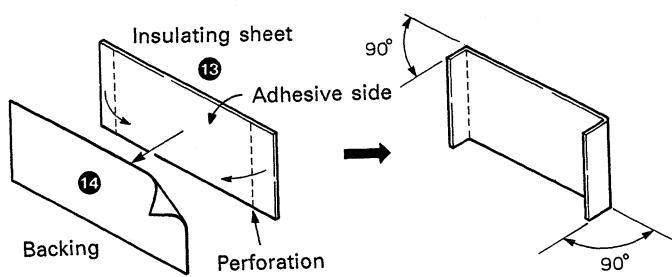

4. Open the transceiver up, and remove the signaling units (A/2 and B/2) from the control assembly and the TX-RX unit (⑦). Remove the dummy lead (⑧) with connectors between the signaling units.
5. Remove the connector (⑩) with its cable from CN204 (⑨) of the TX-RX unit.
6. Remove the two screws (⑪) holding the bottom plate, then remove the bottom plate (⑫).

## INSTALLATION

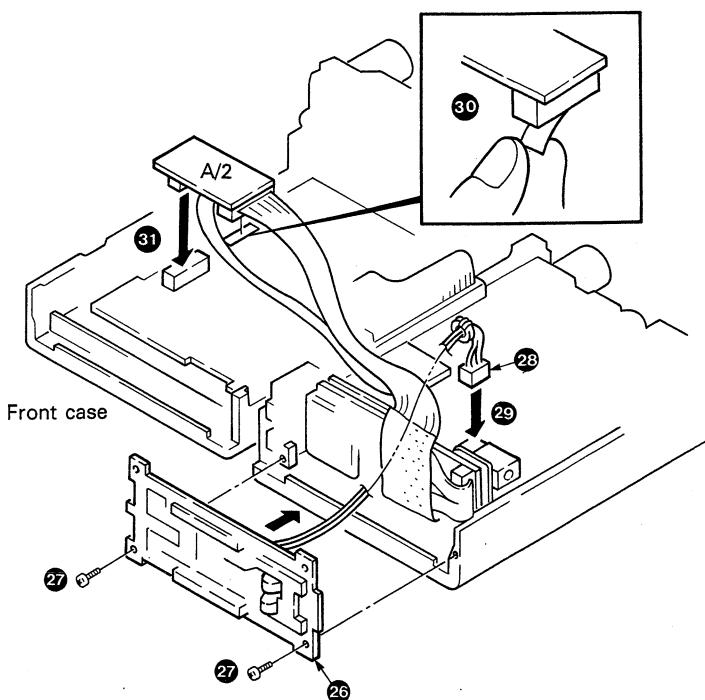

7. Remove the backing (14) from the insulating sheet (13), and fold both ends of the sheet at right angles along the perforations.
8. Attach the insulating sheet (15) so that it does not project from the top or bottom edges (pattern side) of the 5-TONE unit (16). (Position the insulating sheet (15) with the longer flap as shown in the figure.)
9. Attach the fiber sheet (18) by pulling the cables (17) from the 5-TONE unit from the center, and fix the cables. (Do not overlap the cables (19).)
10. Connect the cable with connectors (8 pins : 20, 7 pins : 21) from the 5-TONE unit to the signaling units (A/2 and B/2) (22).
11. Remove the protective sheet (23) on the connector of the signaling unit B/2, and insert the connector into connector CN203 (24) of the TX-RX unit A/2. Press the signaling unit B/2 from above. (Fix it to the TX-RX unit A/2 with adhesive tape.)
12. Insert the 5-TONE unit (16) with the insulating sheet along the shielding plate (25) of the transceiver.

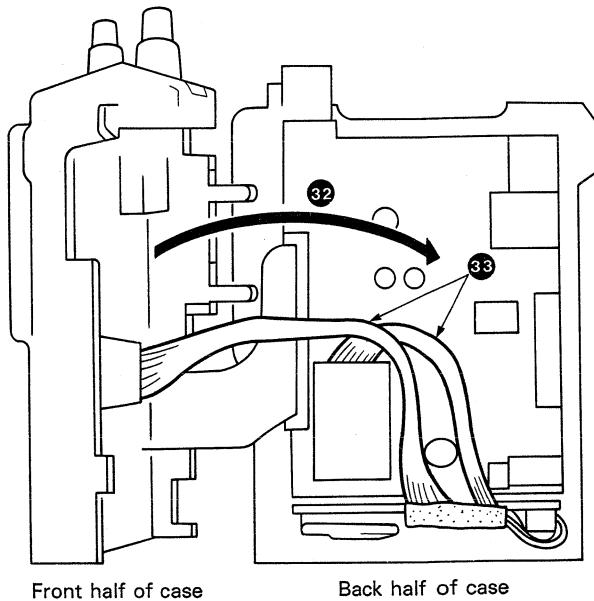

# TK-240(F)

## INSTALLATION

13. Reinstall the bottom plate (26) with the two screws (27).
14. Insert the connector (28) with cabling to CN204 (29).
15. Remove the protective sheet (30) on the connector of the signaling unit A/2, and insert the signaling unit A/2 into connector CN2 (31) of the control assembly. Press the signaling unit A/2 from above. (Fix it to the control unit with adhesive tape.)

16. Put the two halves of the case back together (32). Route the cable (33) as shown in the figure so that it is not caught between the two halves of the case.
17. Reinstall the screws removed in steps 1 and 2.

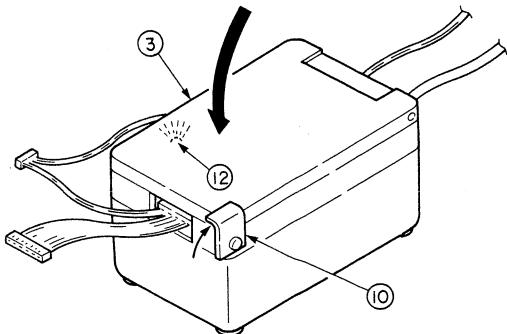

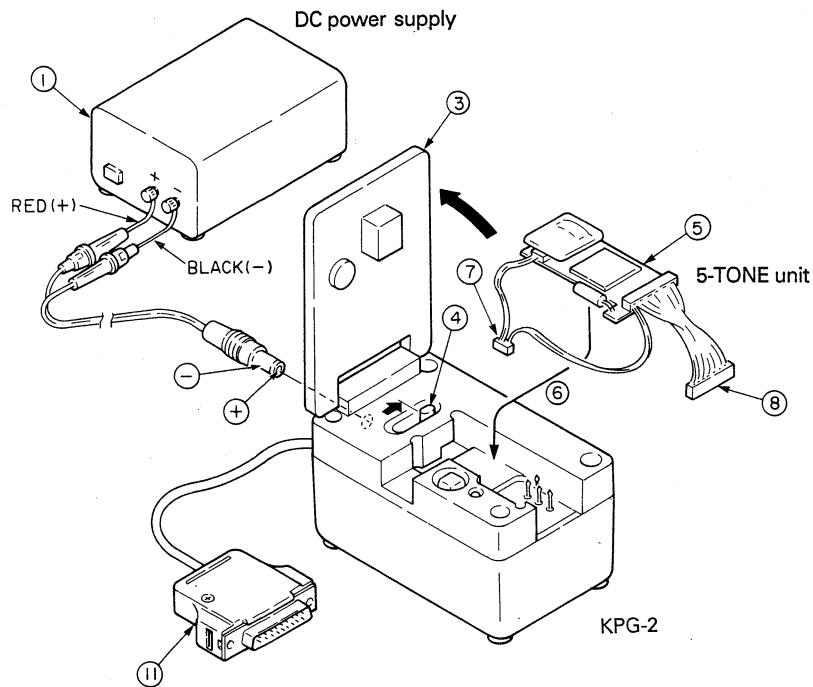

# WRITING METHOD

## 5-TONE Data Write Method

### 1. Setting

1. Connect the DC power supply to the connector on the rear of the KPG-2 (①). (Do not switch anything on yet.)  
Use the cable (②) with a DC plug supplied with the KPG-2.  
Use a DC power supply providing 12V DC (8 to 15V), 0.5A.
2. Open the lid (③) of the KPG-2 and slide lever (④) in the direction of the arrow.
3. Insert 5-TONE unit (KFT-3) (⑤) into the KPG-2 (⑥) as shown in the figure. (Free connector ⑦ and ⑧.)

4. Close the lid (③) of the KPG-2 and secure the lock lever (⑩).
5. Connect the D sub-connector (⑪) to the printer output port of the personal computer (IBM-PC or compatible machine).
6. The connection diagram is shown in figure.
7. Switch the DC power supply on and make sure that the LED (⑫) of the KPG-2 goes on.
8. The following section describes how to start the program.

# TK-240(F)

## WRITING METHOD

### 2. To install onto another flexible or hard disk

The user may install the KPG-3D programming software onto another disk as follows :

1. Insert the KPG-3D disk into an appropriate drive if installing from a flexible disk.
2. Type : 'source-drive:' <ENTER>  
e.g. A: <ENTER>
3. Type : CD \KENWOOD\KPG3D <ENTER>
4. Type : KPG3DINS 'target-drive:' <ENTER>  
e.g. KPG3DINS C: <ENTER>

The program and associated help files and handbook will be loaded into a new sub-directory structure starting at :

\KENWOOD\KPG3D\

The software may also be installed from a hard disk onto a flexible disk by following the same procedure as above.

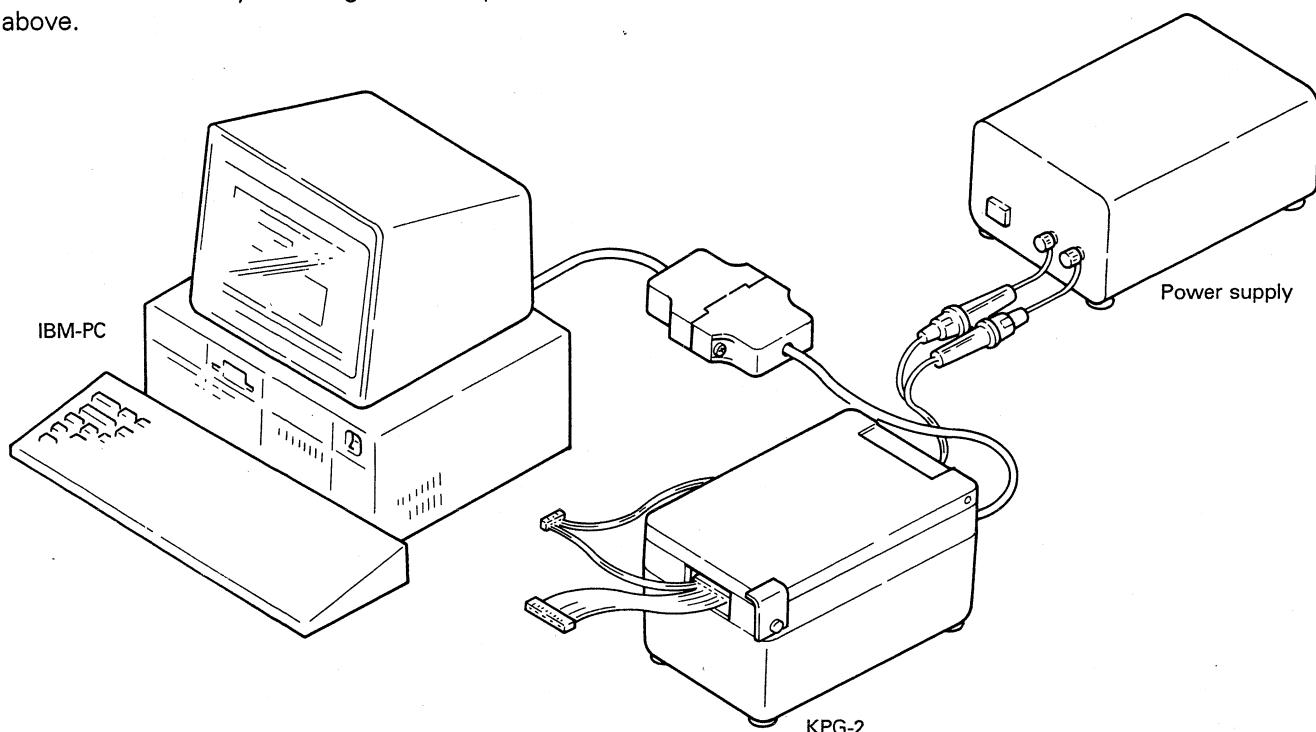

### 3. To start the product support software

If operating the software from a flexible disk, insert the disk into an appropriate drive.

1. Type : 'drive:' <ENTER>  
e.g. A: <ENTER>
2. Type : CD \ <ENTER>
3. Type : KPG3D <ENTER> to start the software

Note :    is space

Note : For programming with the KPG-3D, write the same data as for the KFT-2 items into the KFT-3 unit.

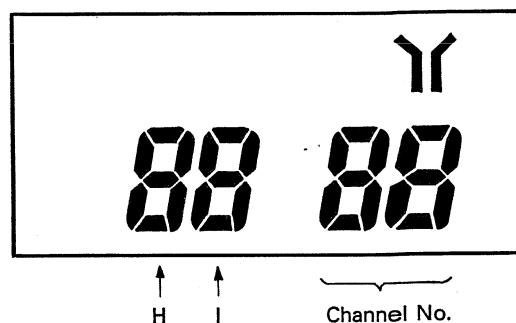

### 4. Precautions for 5-TONE data programming

When data is written into the 5-TONE unit using an IBM-PC, set the TX CALL code as follows :

	IBM-PC display				
The lowermost digit is variable	TX CALL	*	*	*	I
The lower two digits are variable	code	*	*	H	I

- \* is a 5-TONE code from 0 to 9.
- H and I are related to the TK-240(F) panel indications as follows. The digits to which H and I are entered become variable.

H : Incremented with the x10 switch.  
I : Incremented with the x1 switch.

# FREQUENCY SETTING

## 1. Introduction

The frequency for the TK-240(F) is set by storing the transmit, receive, and QT/CTCSS frequencies in the EEPROM as follows.

### 1-1. Modes and their functions

The modes and their functions are summarized below.

Mode name		Function
Setting mode	Dealer setting mode	The dealer determines specifications
	Frequency setting mode	Sets the frequency and tone for each channel
	EEPROM clear mode	After clearing the EEPROM, the frequency setting mode is entered
	Clone mode	Sets the frequency and tone for each channel with the clone function
Use mode	User mode	Used by the user for channel display
	Confirmation mode	The serviceman confirm EEPROM data

Table 1 Modes and their functions

### 1-2. Mode setting

The mode can be changed as follows by removing the two jumpers (T10 and T11) and switching the power on without pressing a key.

Jumpers		Mode name
T10	T11	
1	0	Dealer specification setting mode
0	1	Setting mode (frequency setting mode)
0	0	Use mode (User mode)

0 : No jumper    1 : Jumper

Table 2 Mode change with jumpers

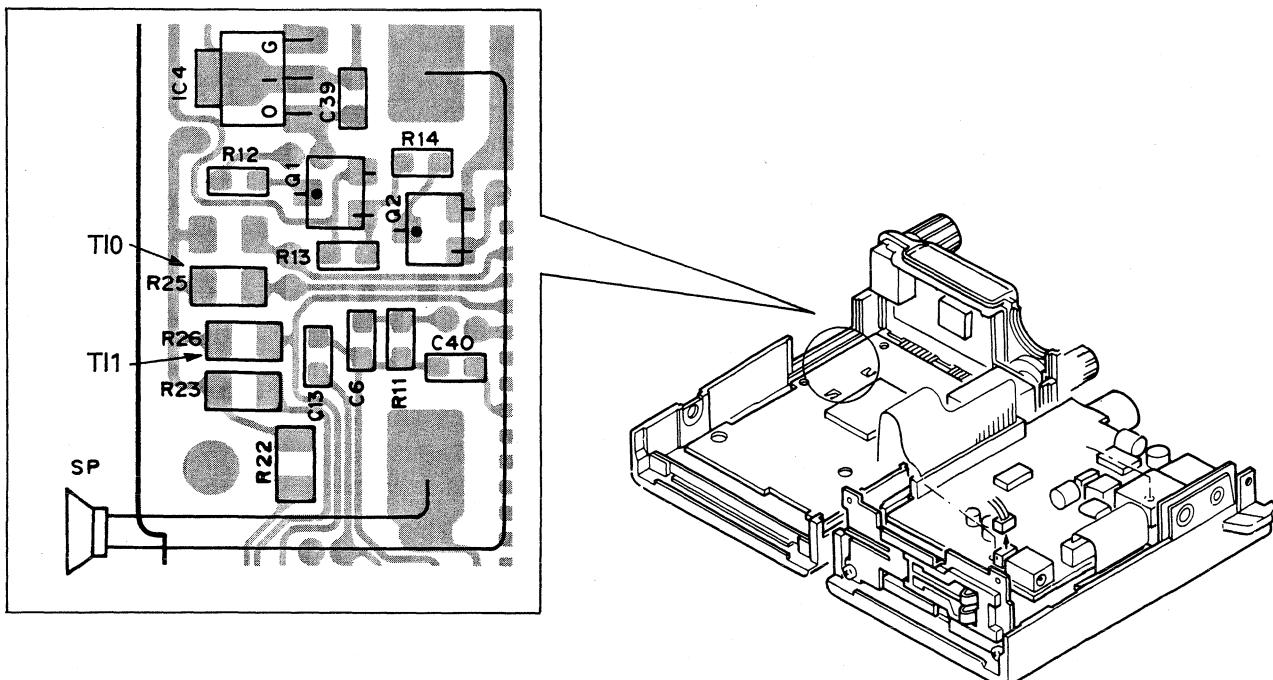

Fig. 1 Jumper locations

# TK-240(F)

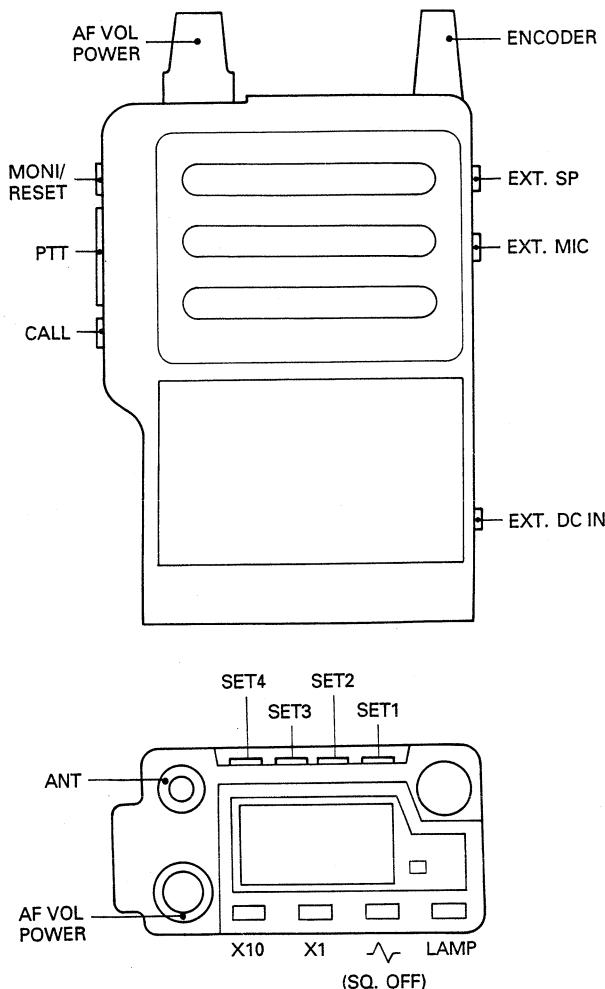

## FREQUENCY SETTING

The default mode is the frequency setting mode (jumper T10 : 0, T11 : 1)

To enter a mode from the setting mode, perform the following operation and switch the POWER ON. Any of the modes can be set in any order.

Operation	Mode
Turn the POWER ON without pressing a key	Frequency setting mode
Hold down the [PTT] key and turn the POWER ON	Dealer setting mode
Hold down the [MONI] key and turn the POWER ON	EEPROM clear mode
Hold down the [SET1] key and turn the POWER ON	Clone mode

**Table 3 Operations for entering each mode from the setting mode**

**Fig. 2 Operation key locations**

When all the work, such as frequency setting and performance checking, is finished, change the mode to the use mode by cutting the jumpers (T10 : 0, T11 : 0) before reassembling the TK-240(F).

Reference : Even if the use mode has been set by removing jumpers, each of the above modes can be entered by software to improve serviceability.

Operation	Mode
Turn the POWER ON without pressing a key	User mode
Hold down the [SET3] key and turn the POWER ON	Confirmation mode
Hold down the [SET3] and [CALL] keys and turn the POWER ON	Frequency setting mode
Hold down the [SET3] and [PTT] keys and turn the POWER ON	Dealer setting mode
Hold down the [SET3] and [MONI] keys and turn the POWER ON	EEPROM clear mode
Hold down the [SET4] key and turn the POWER ON	Clone mode

**Table 4 Operations for entering each mode from the setting mode**

### 2. Frequency Setting Mode

1. This mode is entered when microprocessor T10 is set to high, T11 to low, and the power is turned on without pressing a key.

2. The mode can also be entered from the use mode by holding down the SET3 and CALL keys and turning the POWER ON. The mode is used by the dealer to write the transmit/receive frequency and QT/CTCSS frequency into the EEPROM.

The mode is entered when the POWER is turned ON in the SETTING MODE without pressing any key. When the POWER is turned ON, the 1-channel receive frequency setting mode (1-ch. R-F) is entered. Each time the PTT key is pressed, the mode changes as follows :

- 1) 1-channel receive frequency setting mode
- 2) 1-channel transmit frequency setting mode
- 3) 1-channel transmit QT/CTCSS frequency setting mode
- 4) 2-channel receive frequency setting mode  
↓
- 46) 16-channel receive frequency setting mode
- 47) 16-channel transmit frequency setting mode
- 48) 16-channel transmit QT/CTCSS frequency setting mode
- 49) END display (Writing is complete)

## FREQUENCY SETTING

### 2-1. Receive frequency setting mode

Initial display	
Channel display	: Number of channels to be set
Frequency display	: When a frequency has already been written in to the EEPROM, that frequency When there is no data in the EEPROM, one channel; Initial frequency
Other channel	: Receive frequency of the previous channel

1. When the encoder is turned, the display frequency changes.  
When the encoder is turned while holding down the CALL key, the display frequency changes in 1MHz steps.
2. When the PTT switch is pressed, the displayed frequency is set as the receive frequency for the channel, and the mode changes to the next transmit frequency setting mode.

### 2-2. Transmit frequency setting mode

Initial display	
Channel display	: Number of channels to be set
Frequency display	: When a frequency has already been written in to the EEPROM, that frequency When there is no data in the EEPROM, the receive frequency for the channel
Others	: The ON AIR LED lights to distinguish this mode from the receive frequency setting mode

1. When the encoder is turned, the display frequency changes.  
When the encoder is turned while holding down the LAMP key, the display frequency changes in 1MHz steps.
2. When the PTT switch is pressed, the displayed frequency is set as the transmit frequency for the channel, and the mode changes to the next transmit QT/CTCSS frequency setting mode

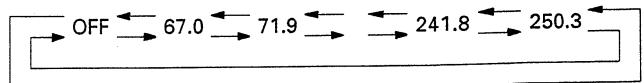

### 2-3. Transmit QT/CTCSS frequency setting mode

Initial display	
Channel display	: Number of channels to be set
Frequency display	: When a QT/CTCSS frequency has already been written into the EEPROM, that QT/CTCSS frequency When there is no data in the EEPROM, OFF is displayed.

Others

: The ON AIR LED lights to distinguish this mode from the receive QT/CTCSS frequency setting mode

1. When the encoder is turned, the QT/CTCSS frequency (38 frequencies + OFF) changes.

2. When the PTT switch is pressed, the displayed QT/CTCSS frequency is set as the transmit QT/CTCSS frequency for the channel, and the mode changes to the next receive frequency setting mode.

When the data for all 16 channels has been written, END is displayed, and no further writing is permitted.

### 2-4. Data confirmation with the MONI key

The written contents can be confirmed by pressing the MONI key in the frequency setting mode. The operation is as follows depending on the condition when the MONI key is pressed.

Condition	Operation
When no write operation is performed using the PTT key after clearing the EEPROM	No operation
When END is displayed	The 1-channel receive frequency setting mode is displayed
In the receive frequency setting mode	The receive frequency setting mode for the previous channel is displayed
In a mode other than above	The receive frequency setting mode for that channel is displayed
When the written contents are being confirmed by pressing the MONI key	Each time the MONI key is pressed, the modes are displayed in the following order: Receive frequency setting mode → Transmit frequency setting mode → Transmit QT/CTCSS frequency setting mode → Receive frequency setting mode for the next channel. The modes are displayed for the channels in which data has been written. If data is written in channel 1 and channel 6, the channels between them are displayed as blank channels.

The encoder, PTT, and CALL keys are effective and data can be rewritten even when data is being confirmed with the MONI key.

# TK-240(F)

## FREQUENCY SETTING

### 3. Clone Mode

In the clone mode, two transceivers are connected together and the contents of the EEPROM of one transceiver are copied to the EEPROM of the other.

The optional KCT-8 is used for cloning. For the connection method, see Figure 3.

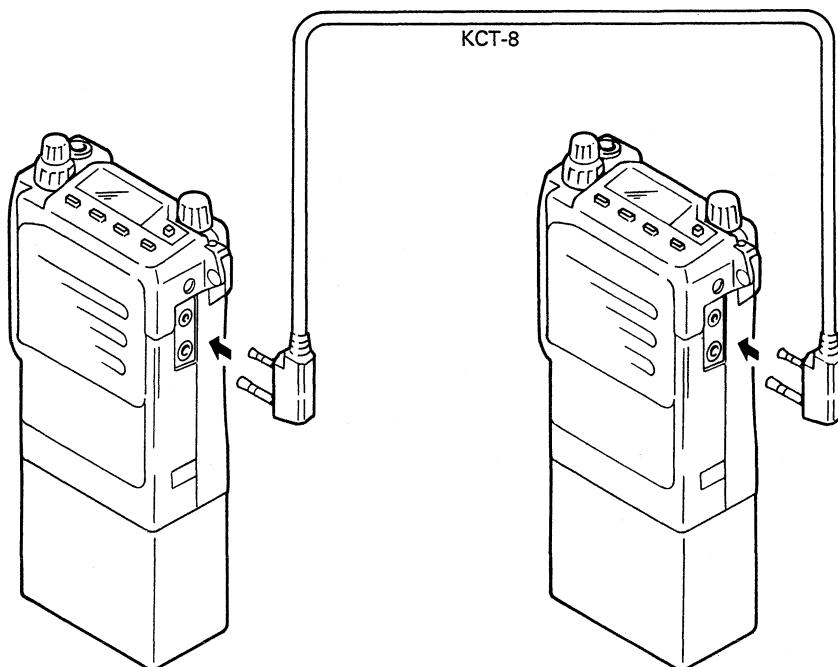

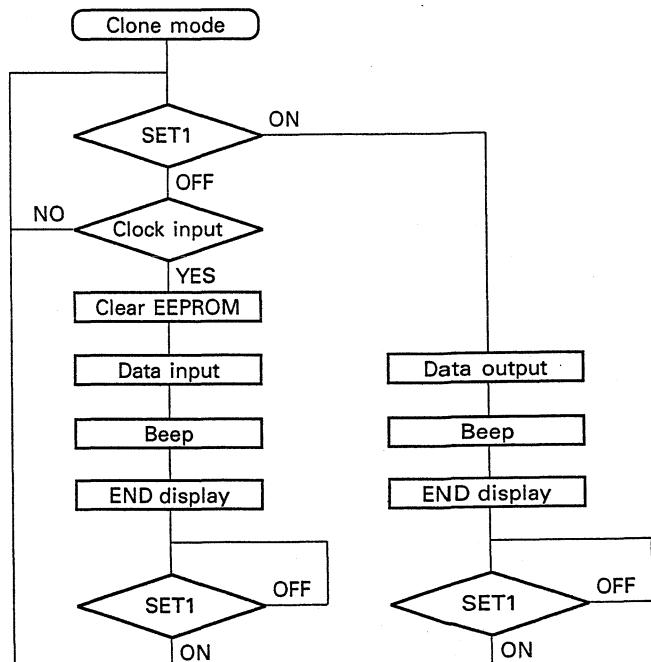

Fig. 3

#### 3-1. Method of operation

1. When the SET1 key is held down and the power is turned on in the setting mode, and when the SET4 key is held down and the power is turned on in the use mode, the clone mode is entered and "-C-" is displayed on the LCD.
2. Connect the clone terminals (PTT line) of the two transceivers in the clone mode.
3. When the SET1 key on the transceiver that has the data to be copied from its EEPROM is pressed, the ON AIR LED lights, and the data is copied from that transceiver to the other. (The display on the receiving transceiver remains unchanged.) When data ends (after about 20 seconds), both transceivers beep and show END on their displays.
4. When the SET1 key is pressed with END displayed, the mode in 1. is entered again. In the clone mode, three types of data can be copied; receive PLL data, transmit PLL data, and transmit tone.

## FREQUENCY SETTING

### 3-2. Condition for using the clone mode correctly

The IF and PLL comparison frequency of the transmitter must match those of the receiver.

If they do not, the clone mode can be used, but the data in the receiver is destroyed.

### 3-3. Clone with a land mobile

A handy transceiver and a land mobile can be connected together in the clone mode in the same way and under the same conditions as when connecting two handy transceivers.

**Note** : If the IF of the TK-240(F) is 30.825MHz, the IF of the other (TK-705) is 21.4MHz, and the PLL comparison frequencies are the same, the clone mode is effective.

## 4. User Mode

The user mode is for the user. This mode is entered when the power is turned on in the use mode (except when the SET1 key is held down and the power is turned on).

### 4-1. Initial state

CH : If the last channel number is maintained, the transceiver enters the receive state with that channel. If not, the transceiver enters the receive state with one channel.

MONI/RESET : OFF

SQ OFF : OFF

5-TONE No. : If the tone number has been backed up, the 5-TONE unit operates with that number. If it has not been backed up, 00 is used.

### 4-2. Functions

Encoder : Channel UP/DOWN

MONI/RESET : MONI ON/OFF, RESET

SQ OFF : SQ ON/OFF

PTT : Transmit/receive

LAMP : LAMP ON/OFF

## 5. Confirmation Mode

In this mode, the serviceman can confirms EEPROM data in the use mode.

### 5-1. Operation

When the SET3 key is held down and the power is turned on in the use mode, the mode changes to the confirmation mode and the receive frequency of 1CH is displayed.

Subsequent operations are the same as those for data confirmation with the MONI key in the frequency setting mode. However, the encoder, PTT, SQ OFF, CALL, x1, and x10 keys are disabled.

### 6. Dealer Setting Mode

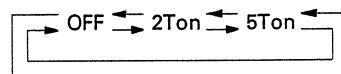

Dealer setting mode is set by making T10 of the microprocessor low, and T11, high. The mode is then entered by switching the power on without holding down any key. From use mode, dealer setting mode can be entered by holding down the SET3 and PTT keys and switching the power on.

Whenever the PTT key is pressed, the mode changes as follows (1 to 5). The options for each mode can be set with the control panel keys while observing the display.

1. Signaling setting (Note : Steps 2 to 5 are described when 5-TONE is set in step 1.)
2. 5-TONE code variable function
3. Group tone setting
4. Battery save setting
5. OFF display

### 6-1. Signaling setting mode

When the encoder is turned, the display changes. Set it to 5-TONE.

OFF : Signaling is not set  
2Ton : 2-TONE  
5Ton : 5-TONE

LCD (When 5-TONE is set)

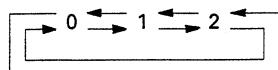

Press the PTT key

# TK-240(F)

## FREQUENCY SETTING

### 6-2. 5-TONE code variable function

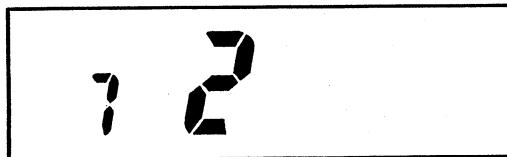

- When the 5-TONE unit is installed and the encoder is turned, the display changes.

0 : Fixed code  
1 : One-digit variable  
2 : Two-digit variable

Note : Set the 5-TONE unit to the same value (when the KPG-3D is used).

LCD (Example : The two-digit variable function is set)

- Press the PTT key

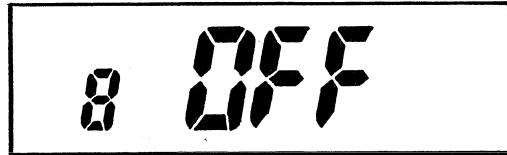

### 6-3. Group tone setting mode

- When the encoder is turned, the display changes.

ON ↔ OFF

ON : With group tone  
OFF : Without group tone

LCD (Example : Group tone is set to OFF)

- Press the PTT key

### 6-4. Battery save setting mode

- When the encoder is turned, the display changes.  
Set it to OFF.

ON ↔ OFF

LCD (Set to OFF)

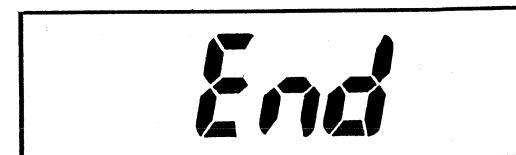

- Press the PTT key

### 6-5. END

- The LCD shows End, and the Dealer setting mode is terminated.

LCD

# CIRCUIT DESCRIPTION

## 1. Digital Control Circuits

### 1-1. Switch and rotary encoder circuit

The signal is applied directly to the microprocessor as shown in Figure 1.

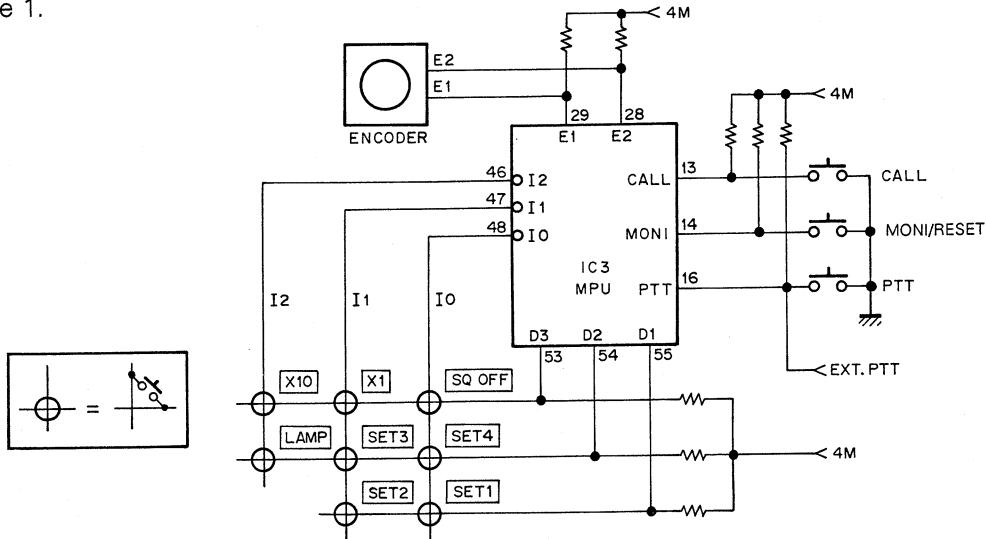

Fig. 1 Switch and rotary encoder input circuit

## 2. 5-TONE Circuit

### 2-1. 5TONE code transmission

When the CALL switch is pressed to call the other station, the CPU (IC3 : control) transfers data to the shift register (IC1 : signaling unit). The TX CALL pin of IC1 goes low, and when the signal is input to the 5-TONE unit, the following occurs:

1. TX ON goes low
2. MIC MUTE goes high

IC3 detects that TX ON is low and enables transmission. The CPU (IC3) detects that MUTE of IC3 is high, and effects muting so that modulation is not applied to MIC by the MM pin of IC1.

The 5-TONE code is then output from the TONE pin of the 5-TONE unit. The 5-TONE code level can be adjusted by the variable resistor (VR21) in the signaling unit, and the code enters the microphone amplifier (IC201) of the TX-RX unit (A/2), and modulates the VCO.

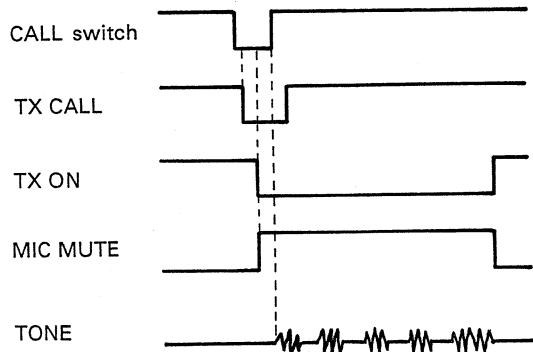

Fig. 2

### 2-2. Wait for the 5-TONE code

The received signal is demodulated by IC205 in the TX-RX unit (A/2), and the resulting signal passes through the buffer amplifier (Q213), and enters RD of the 5-TONE unit via the RD terminal of the signaling unit.

If the 5-TONE code matches in the 5-TONE unit, the LED terminal of the 5-TONE unit goes low, and the signal enters the LED pin of the CPU (IC3). The CPU displays the ☺ symbol on the LCD. MUTE of the 5-TONE unit goes low, the signal enters MUTE of the CPU (IC3), and muting of the audio amplifier (IC204) is canceled.

The alert signal is output from the ALERT terminal of the 5-TONE unit, passes through the filter (C21, R21, R28) in the signaling unit, and enters the audio amplifier (IC204). The signal is amplified by the audio amplifier, and output to the speaker.

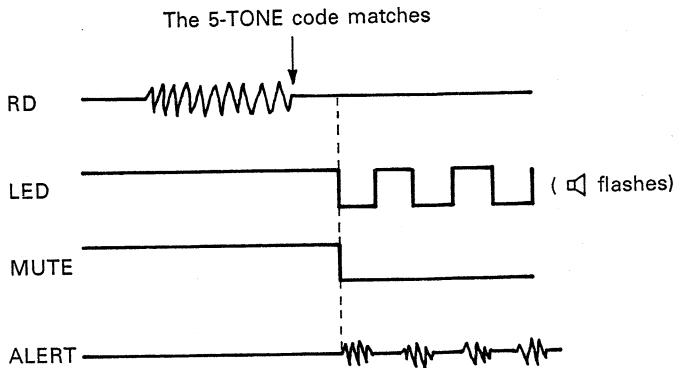

Fig. 3

# TK-240(F)

## CIRCUIT DESCRIPTION

### 2-3. Transmission when the 5-TONE code matches

When the PTT switch is pressed, data is transmitted from the CPU (IC3) to the shift register (IC1). When the PTT pin of IC1 goes low, TX ON of the 5-TONE unit goes low. The CPU (IC3) detects that TX ON has gone low, and enters the transmit mode.

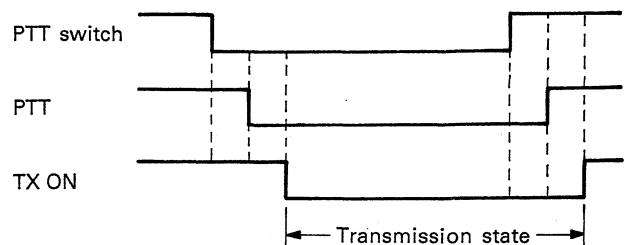

Fig. 4

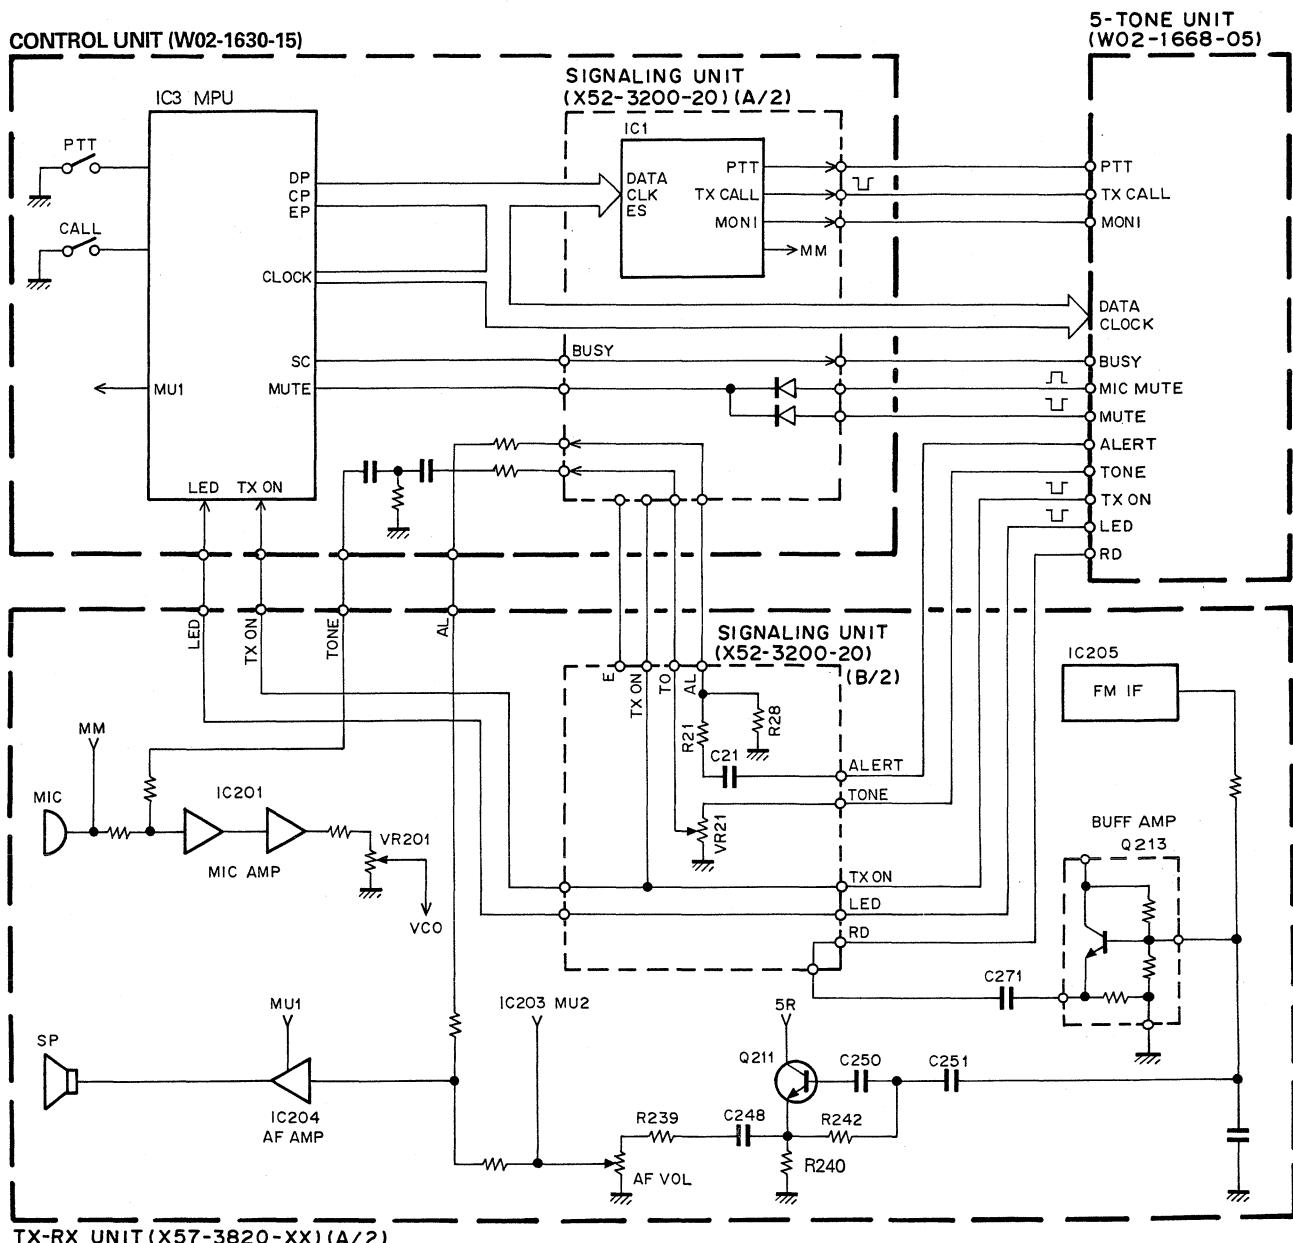

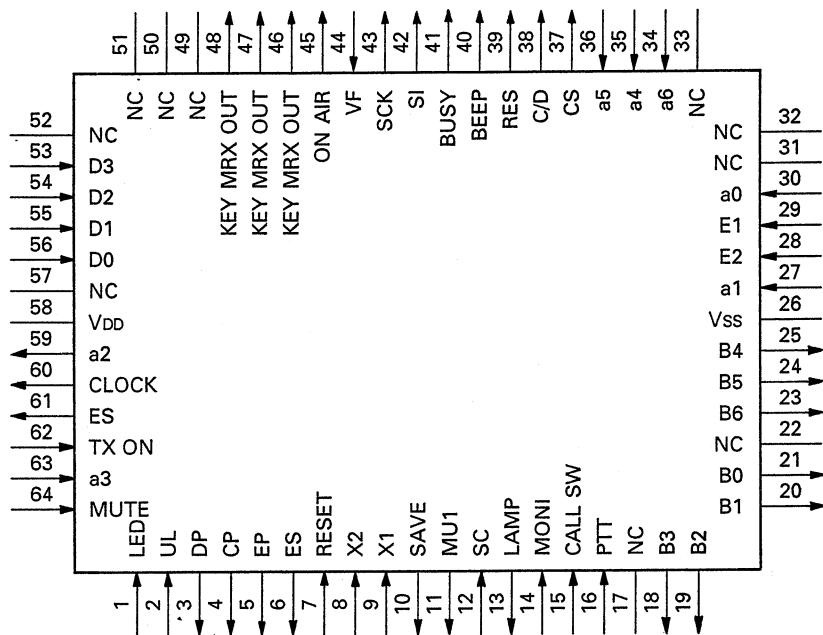

Fig. 5 5-TONE circuit

## SEMICONDUCTOR DATA

## 1. MPU : (Control unit IC3)

- Terminal connection diagram

- Terminal function

Pin No.	Port name	I/O	Function
1	LED	I	5-TONE LED "L" : Not match, "H" : Match
2	UL	I	PLL unlock data input "L" : Lock, "H" : Unlock
3	DP	O	PLL, 5-TONE and shift register EEPROM data output
4	CP	O	PLL, 5-TONE and shift register EEPROM clock output
5	EP	O	Enable output (PLL)
6	ES	O	Enable output (Shift register)
7	RESET	I	Reset voltage input
8	X2	I	Clock OSC.
9	X1	I	Clock OSC.
10	SAVE	O	Power save control data output
11	MU1	O	AF AMP control data output "L" : OFF, "H" : ON
12	SC	I	Busy data input "H" : Busy
13	LAMP	O	Lamp control data output
14	MONI	I	MONI switch data input "L" : ON, "H" : OFF
15	CALL SW	I	CALL switch data input "L" : ON, "H" : OFF
16	PTT	I	PTT switch data input "L" : OFF, "H" : ON
17	NC	I	Pull up
18	B3	O	Sub tone data output : bit 3
19	B2	O	Sub tone data output : bit 2
20	B1	O	Sub tone data output : bit 1
21	B0	O	Sub tone data output : bit 0
22	NC	O	Open
23	B6	O	Sub tone data output : bit 6

## ADJUSTMENT

### Required Test Equipment

#### 1. Stabilized Power supply

1. The supply voltage can be changed between 5V and 18V, and the current is 3A or more.
2. The standard voltage is 12.0V.

#### 2. DC Ammeter

1. Class 1 ammeter (17 ranges and other features).
2. The full scale can be set to either 300mA or 3A.
3. A cable of less internal loss must be used.

#### 3. Frequency Counter (f. counter)

1. Frequencies of up to 1GHz or so can be measured.
2. The sensitivity can be changed to 250MHz or below, and measurements are highly stable and accurate (0.2ppm or so).

#### 4. Power Meter

1. Measurable frequency : Up to 500MHz
2. Impedance :  $50\Omega$ , unbalanced
3. Measuring range : Full scale of 10W or so
4. A standard cable (5D2W 1m) must be used.

#### 5. RF VTVM (RF V.M.)

1. Measurable frequency : Up to 500MHz or so

#### 6. Linear Detector

1. Measurable frequency : Up to 500MHz
2. Characteristics are flat, and CN is 60dB or more.

#### 7. Digital Voltmeter

1. Voltage range : FS = 18V or so
2. Input resistance :  $1M\Omega$  or more

#### 8. Oscilloscope

1. Measuring range : DC to 30MHz
2. Provides highly accurate measurements for 5 to 25MHz.

#### 9. AF Voltmeter (AF VTVM)

1. Measurable frequency : 50Hz to 1MHz
2. Maximum sensitivity : 1mV or more

#### 10. Spectrum Analyzer

1. Measuring range : DC to 1GHz or more

#### 11. Standard Signal Generator (SSG)

1. Maximum frequency : 500MHz or more
2. Output : -20dB/0.1 $\mu$ V to 120dB/1V
3. Output impedance :  $50\Omega$

#### 12. Tracking Generator

1. Center frequency : 50kHz to 500MHz
2. Frequency deviation :  $\pm 35MHz$
3. Output voltage : 100mV or more

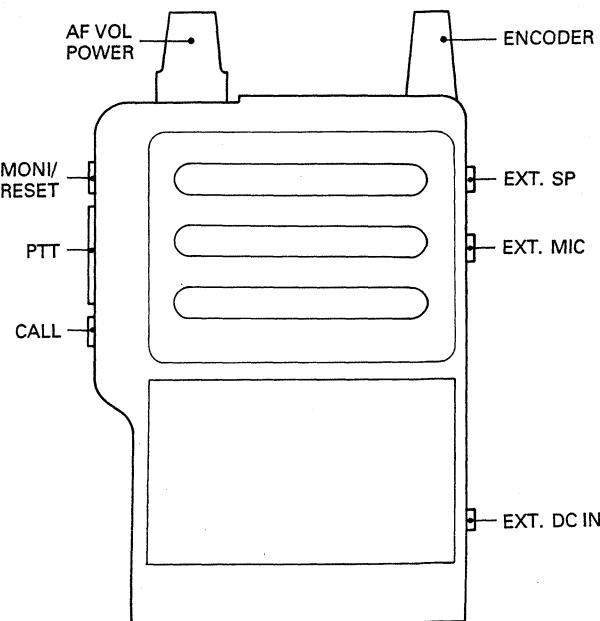

#### 13. Dummy Load

1.  $8\Omega$ , 3W or more

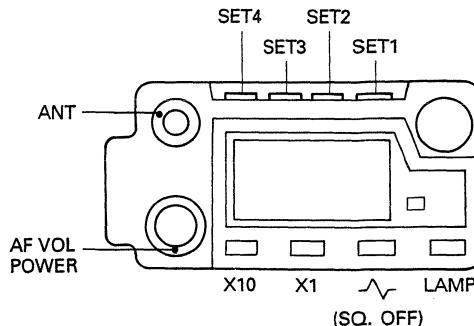

- Use a non-conductive rod such as a Bakelite rod for adjustment (especially of trimmers and coils).
- To protect the SSG, do not send out signals while adjusting the receiving unit.
- The indicated SSG output levels are for maximum output.

Version	Frequency range	Remark	
M	150~174MHz	IF1	34.400MHz
		LOC	34.855MHz
M2	136~150MHz	IF1	30.825MHz
		LOC	30.370MHz

## SPECIFICATIONS

### GENERAL

Frequency Range .....	150 to 174MHz : M type 136 to 150MHz : M2 type
Number of Channels .....	16 semi-duplex channels
Channel Spacing .....	30kHz (PLL channel step 5kHz)
Selective Calling .....	5 tone encode, decode ZVEI (ZVEI-1, ZVEI-2, DZVEI, PZVEI), EEA, CCIR, NATEL, EIA
Battery Voltage .....	7.5V (with KNB-5 or KNB-6) 12.5V (with KNB-7A)
Temperature Range .....	-30°C to +60°C (-22°F to +140°F)
Battery Life .....	More than 8 hours with KNB-6 battery (5-5-90 duty cycle)
Dimensions and Weight	
With KNB-5 (7.5V, 600mA battery) .....	5.69" (144.5mm) H x 2.28" (58mm) W x 1.16" (29.5mm) D, 14.10ozs. (400g)
With KNB-6 (7.5V, 1100mA battery) .....	7.38" (187.5mm) H x 2.28" (58mm) W x 1.16" (29.5mm) D, 17.64ozs. (500g)
With KNB-7 (12.5V, 600mA battery) .....	7.38" (187.5mm) H x 2.28" (58mm) W x 1.16" (29.5mm) D, 17.64ozs. (500g)
Applicable MIL-STD .....	MIL 810D rain method 506.2, procedure 2

### RECEIVER (Measurements made per EIA standard EIA-316-B)

#### Sensitivity

EIA 12dB SINAD .....	0.25µV
20dB Quieting .....	0.35µV
Squelch Sensitivity .....	0.16µV threshold
Modulation Acceptance .....	±7kHz
Selectivity .....	-70dB
Intermodulation .....	-65dB
Spurious Rejection .....	-70dB
Image Rejection .....	-70dB
Audio Power Output .....	250mW at less than 5% distortion (300mW with KNB-7 battery)
Frequency Stability .....	±0.0005% from -30°C to +60°C
Channel Frequency Spread .....	24MHz

### TRANSMITTER (Measurements made per EIA standard EIA-316-B)

RF Power Output .....	5W with KNB-7 battery 2W with KNB-5 or KNB-6 battery
Spurious and Harmonics .....	-70dB
Modulation .....	F3E, ±5kHz for 100% at 1000Hz
FM Noise .....	-45dB
Microphone Impedance .....	High impedance
Audio Distortion .....	1.0% at 1000Hz
Frequency Stability .....	±0.0005% from -30°C to +60°C
Channel Frequency Spread .....	24MHz

Radio specifications may vary in accordance with the type accepted local national regulations (including 12.5kHz narrow channel spacing).
