VHF FM TRANSCEIVER

TK-760G/762G

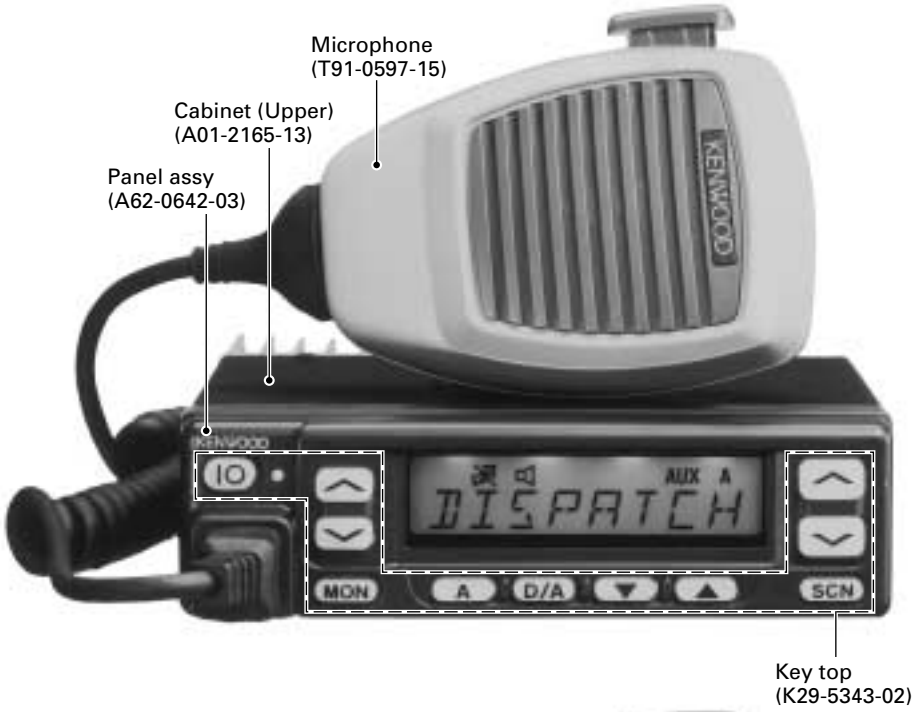
SERVICE MANUAL

REVISED

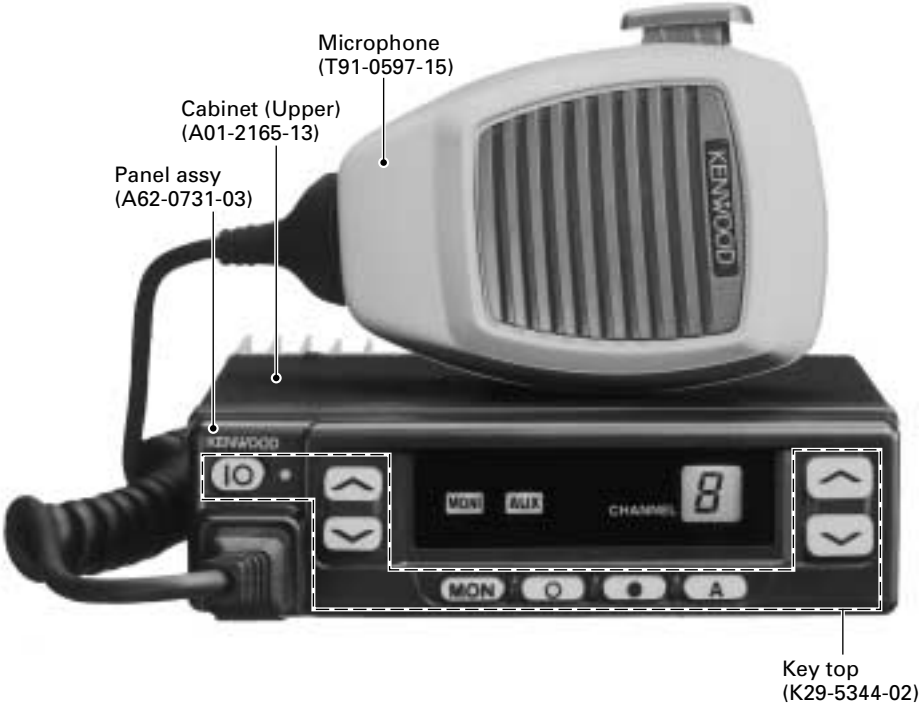
KENWOOD

B51-8497-10 (N) 1269

TK-760G (K)



TK-762G (K)



Please use this manual in place of the service manual (preliminary version), B51-8497-00.
We have added the information on the circuit description, specifications, and K2 version specifications to the service manual (preliminary version), B51-8497-00.

CONTENTS / GENERAL

CONTENTS

GENERAL

INTRODUCTION

SCOPE OF THIS MANUAL

This manual is intended for use by experienced technicians familiar with similar types of commercial grade communications equipment. It contains all required service information for the equipment and is current as of the publication date. Changes which may occur after publication are covered by either Service Bulletins or Manual Revisions. These are issued as required.

ORDERING REPLACEMENT PARTS

When ordering replacement parts or equipment information, the full part identification number should be included. This applies to all parts : components, kits, or chassis. If the part number is not known, include the chassis or kit number of which it is a part, and a sufficient description of the required component for proper identification.

PERSONNEL SAFETY

The following precautions are recommended for personnel safety :

- DO NOT transmit if someone is within two feet (0.6 meter) of the antenna.
- DO NOT transmit until all RF connectors are verified secure and any open connectors are properly terminated.
- SHUT OFF and DO NOT operate this equipment near electrical blasting caps or in an explosive atmosphere.
- All equipment should be properly grounded before power-up for safe operation.
- This equipment should be serviced by a qualified technician only.

PRE-INSTALLATION CONSIDERNATIONS

1. UNPACKING

Unpack the radio from its shipping container and check for accessory items. If any item is missing, please contact KENWOOD immediately.

2. LICENSING REQUIREMENTS

Federal regulations require a station license for each radio installation (mobile or base) be obtained by the equipment owner. The licensee is responsible for ensuring transmitter power, frequency, and deviation are within the limits permitted by the station license.

Transmitter adjustments may be performed only by a licensed technician holding an FCC first, second or general class commercial radiotelephone operator's license. There is no license required to install or operate the radio.

GENERAL

3. PRE-INSTALLATION CHECKOUT

3-1. Introduction

Each radio is adjusted and tested before shipment. However, it is recommended that receiver and transmitter operation be checked for proper operation before installation.

3-2. Testing

The radio should be tested complete with all cabling and accessories as they will be connected in the final installation. Transmitter frequency, deviation, and power output should be checked, as should receiver sensitivity, squelch operation, and audio output. Signalling equipment operation should be verified.

4. PLANNING THE INSTALLATION

4-1. General

Inspect the vehicle and determine how and where the radio antenna and accessories will be mounted.

Plan cable runs for protection against pinching or crushing wiring, and radio installation to prevent overheating.

4-2. Antenna

The favored location for an antenna is in the center of a large, flat conductive area, usually at the roof center. The trunk lid is preferred, bond the trunk lid and vehicle chassis using ground straps to ensure the lid is at chassis ground.

4-3. Radio

The universal mount bracket allows the radio to be mounted in a variety of ways. Be sure the mounting surface is adequate to support the radio's weight. Allow sufficient space around the radio for air cooling. Position the radio close enough to the vehicle operator to permit easy access to the controls when driving.

4-4. DC Power and wiring

1. This radio may be installed in negative ground electrical systems only. Reverse polarity will cause the cable fuse to blow. Check the vehicle ground polarity before installation to prevent wasted time and effort.
2. Connect the positive power lead directly to the vehicle battery positive terminal. Connecting the Positive lead to any other positive voltage source in the vehicle is not recommended.
3. Connect the ground lead directly to the battery negative terminal.
4. The cable provided with the radio is sufficient to handle the maximum radio current demand. If the cable must be extended, be sure the additional wire is sufficient for the current to be carried and length of the added lead.

5. INSTALLATION PLANNING – CONTROL STATIONS

5-1. Antenna system

Control station. The antenna system selection depends on many factors and is beyond the scope of this manual. Your KENWOOD dealer can help you select an antenna system that will best serve your particular needs.

5-2. Radio location

Select a convenient location for your control station radio which is as close as practical to the antenna cable entry point. Secondly, use your system's power supply (which supplies the voltage and current required for your system). Make sure sufficient air can flow around the radio and power supply to allow adequate cooling.

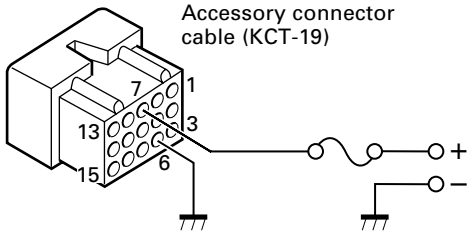
SERVICE

This radio is designed for easy servicing. Refer to the schematic diagrams, printed circuit board views, and alignment procedures contained in this manual.

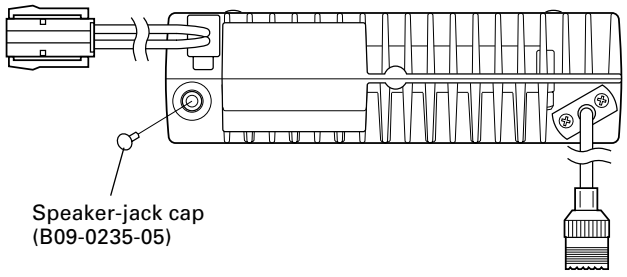
Note

When you modify your radio as described in system set-up, take the following precaution.

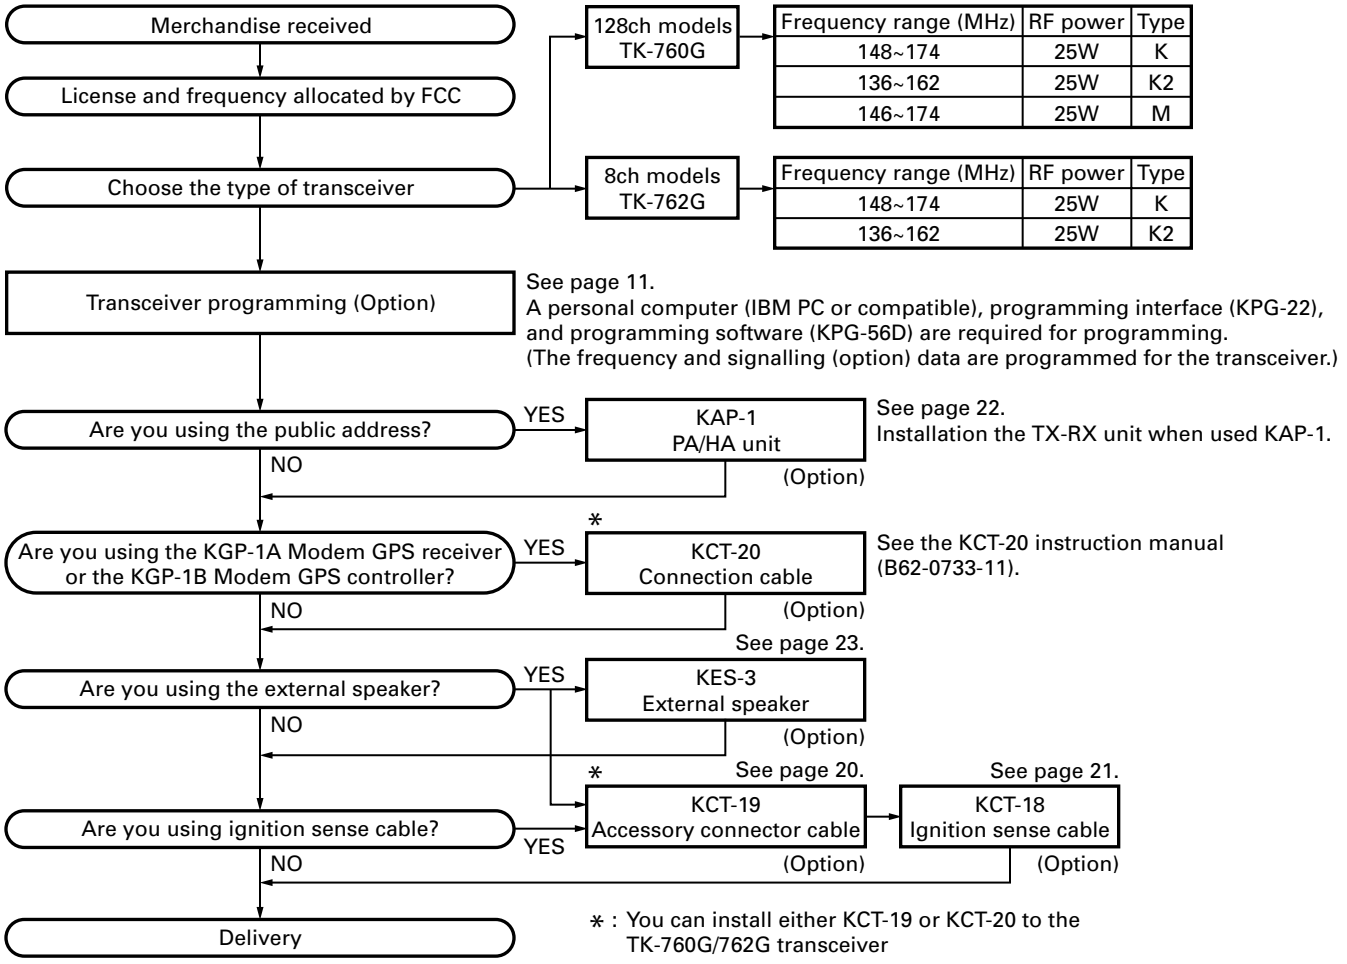
The rating of pin 7 (SB) of the accessory connector cable (KCT-19) on the rear of the radio is 13.6V (1A). Insert a 1A fuse if you use the SB pin for external equipment.



If you do not intend to use the 3.5-mm jack for the external speaker, fit the supplied speaker-jack cap (B09-0235-05) to stop dust and sand getting in.



SYSTEM SET-UP



Frequency range (MHz)	RF power	Type
148~174	25W	K
136~162	25W	K2
146~174	25W	M

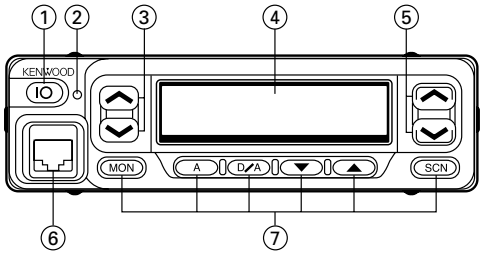
Frequency range (MHz)	RF power	Type
148~174	25W	K
136~162	25W	K2

∗ : You can install either KCT-19 or KCT-20 to the TK-760G/762G transceiver

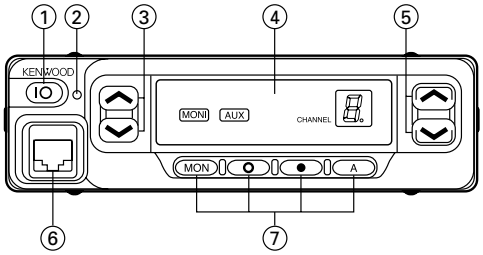
OPERATING FEATURES

1. Controls and Functions

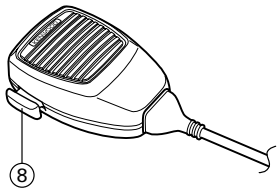
1-1. TK-760G Front Panel



1-2. TK-762G Front Panel



1-3. Microphone



① IO (Power) switch
Press to switch the transceiver ON (or OFF).

② LED indicator
Lights red while transmitting. Lights green while receiving. Flashes orange while receiving a Code Squelch or Selective Call code, or a 2-Tone code that matches the one set up in your transceiver.

③ ∧/∨keys
These are PF (Programmable Function) keys. Press each key to activate its auxiliary function. The default settings are Volume Up and Volume Down.

④ Display
See right.

⑤ ∧/∨keys
These are PF (Programmable Function) keys. Press each key to activate its auxiliary function. The default settings are Channel Up and Channel Down.

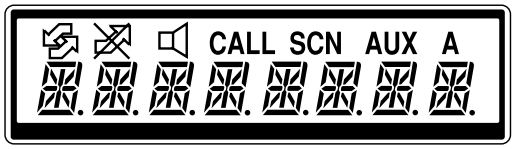
⑥ Microphone jack
Insert the microphone plug into this connector.

⑦ MON, A, D/A, ▼, ▲, and SCN keys (TK-760G)
MON, ○, ●, and A keys (TK-762G)
These are PF (Programmable Function) keys. Press each key to activate its auxiliary function.

⑧ PTT (Push-to-Talk) switch
Press this switch, then speak into the microphone to call a station.

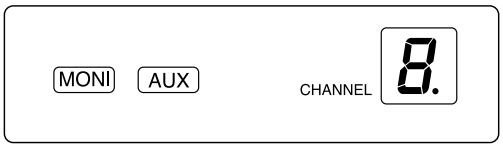
1-4. Display

■ **TK-760G**



Indicator	Description
	Appears while using SmarTrunk.
	Appears when the selected channel in busy.
	Appears when QT, DQT, DTMF, or 2-Tone decoding is deactivated (by pressing the Monitor key).
CALL	Appears when you receive a Code Squelch, Selective Call, 2-Tone code. Also appears when you transmit using Code Squelch or Selective Call.
SCN	Appears while scanning.
AUX	Appears when the AUX port is activated.
A	Appears when the selected channel is included in the scanning sequence.
	Displays the selected channel number (or name), DTMF digits (when entering digits, confirming digits, or making a call), and messages received via Selective Call.

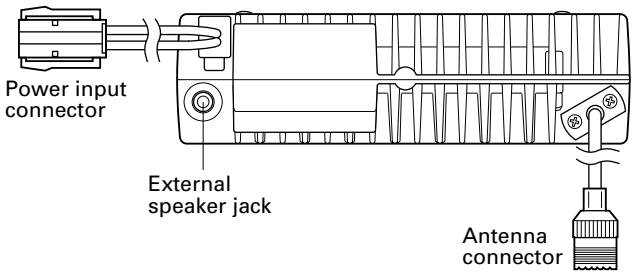
■ **TK-762G**



Indicator	Description
MONI	Appears when QT, DQT, DTMF, or 2-Tone decoding is deactivated (by pressing the Monitor key).
AUX	Appears when the AUX port is activated.
8.	Displays the selected channel number.

OPERATING FEATURES

1-5. Rear panel



1-6. Programmable Auxiliary Functions

The following keys can be programmed with the functions listed below.

TK-760G : ∧/∨ (left side),∧/∨ (right side), MON, A, D/A, ▼, ▲, and SCN.

TK-762G : ∧/∨ (left side),∧/∨ (right side), MON, ○, ●, and A.

- AUX
- Channel Down
- Channel Up
- Display Character (TK-760G only)
- Emergency *1
- Group Down (TK-760G only)
- Group Up (TK-760G only)
- Home Channel
- Horn Alert
- Key Lock
- Monitor A (Monitor Unmute-Momentary)
- Monitor B (Monitor Unmute-Toggle)
- Monitor C (Carrier Squelch-Momentary)
- Monitor D (Carrier Squelch-Toggle)
- None (No function)
- Operator Selectable Tone *2 (TK-760G only)
- Public Address
- Redial
- Scan (TK-760G only)
- Scan Del/Add (TK-760G only)
- Selectable QT *3 (TK-760G only)
- Talk-Around
- Volume Up
- Volume Down
- 2-Tone Encode Select *4

*1 : This function can be used only with a foot switch.
*2 : This function is available for K market models only.
*3 : This function is available for M market models only.
*4 : The code for the TK-762G transceiver is not selectable. You can transmit only one 2-Tone code, which is preprogrammed in the transceiver.

2. Operation Features

The TK-760G/762G is a VHF FM radio designed to operate in conventional format. The programmable features are summarized.

3. Transceiver Controls and Indicators

3-1. Front Panel Controls

All the keys on the front panel are momentary-type push buttons. The functions of these keys are explained below.

- **POWER key**

Transceiver POWER key. When the power is switched off, all the parameters are stored in memory. When the power is switched on again, the transceiver returns to the previous conditions.

- **CHANNEL UP/DOWN key (Programmable)**
- **▲/▼ key (Programmable) : TK-760G only**
- **SCAN key (Programmable) : TK-760G only**
- **MONITOR key (Programmable)**
- **A, D/A key (Programmable) : TK-760G only**
- **○ ,● , A key (Programmable) : TK-762G only**
- **VOLUME UP/DOWN key (Programmable)**
- **BUSY/TX LED**

The BUSY indicator (Green LED) shows that the channel is in use. The TX indicator (Red LED) shows that you are transmitting.

3-2. Programmable Keys

The FPU (KPG-56D) enables programmable keys to select the following functions.

AUX, Channel down, Channel up, Display character *1, Emergency (Only foot key ; M type only), Group down *1, Group up *1, Home channel, Horn alert, Key lock, Monitor A, Monitor B, Monitor C, Monitor D, Operator selectable tone (K type only), Public address, Redial, Scan *1, Scan del/add *1, Talk around, Volume down, Volume up and None.

These functions the FPU programs to the functionkeys and described in the following sections.

*1 : TK-760G only.

- **AUX**

If this key is pressed, "AUX" icon lights on the display and AUX port which is inside of the transceiver turns to the high level. If pressed again, the "AUX" icon goes off and the AUX ports turns to the lower level.

- **Channel up/down**

When the key is pressed each time, the channel number to be selected is incremented/decremented and repeats if held for one second or longer.

OPERATING FEATURES

- **Display character (TK-760G only)**

This key switches the LCD display between the group and channel number and the group and channel name.

- **Emergency (M market models only)**

Pressing this key for longer than 1 second causes the transceiver to enter the emergency mode. The transceiver jumps to the programmed "Emergency the group and channel" and transmits for 25 seconds.

The transceiver disables mic mute while transmitting. After finishing transmission, the transceiver receivers for 5 seconds. The transceiver mutes the speaker while receiving. Following the above sequence, the transceiver continues to transmit and receive.

- **Group up/down (TK-760G only)**

When the key is pressed each time, the group number to be selected is incremented/decremented and repeats if held for one second or longer.

- **Home channel**

Press this key once, the channel switches to the pre-programmed home channel.

- **Horn alert**

If you are called from the base station using 2-tone/DTMF while you are away from your transceiver, you will be alerted by the vehicle horn or some other type of external alert. To turn the horn alert function on , press this key. A confirmation tone sounds, (and the display shows "HA" on the LCD *1).

If this key is pressed again, the horn alert function is turned off.

*1 : TK-760G only.

- **Key lock**

Pressing this key causes the transceiver to accept entry of only the [Vol Up/Down], [Key lock], [PTT], [Monitor A], [Monitor B], [Monitor C], [Monitor D], and [Emergency] keys.

- **Monitor**

Used to release signalling or squelch when operating as a conventional. It is also used to reset option signalling.

- **Operator selectable tone (K market models only)**

This key switches the pre-set decode QT/DQT and encode QT/DQT to OST (Operator Selectable Tone) tone pair.

Press this key, the transceiver enters to OST select mode. In this mode, the display shows "OFF" and the operator can select one of the OST tone pair using the channel up/down key. The display shows "TONE ✳✳" and tone pair No. ✳✳ is selected.

Press OST key again, the transceiver exits from the OST select mode.

16 kinds of tone pair for OST can be programmed by KPG-56D. OST is useful to access the repeater with same radio frequency and different tone (QT/DQT).

- **Public address**

Public address amplifies the microphone audio, and outputs it through a PA speaker. PA is activated by pressing this key. A confirmation tone sounds, (and the display shows "PA" *1). PA can be activated at anytime (scanning or non-scanning).

The RADIO continues to scan & receive calls while in PA mode. Pressing PTT activates PA, and will override an incoming call at anytime; however, no RADIO transmission takes place.

If this key is pressed again, a confirmation tone will sound, (the display will return to the normal channel or SCAN display *1), and the PA function will turn off.

*1 : TK-760G only.

- **Redial**

If you press this key when the group/channel is displayed, the last transmitted DTMF code will appear on the display. Pressing the PTT switch at this time will transmit the displayed DTMF code.

- **Scan (TK-760G only)**

Press this key starts scanning. Pressing this key stops scanning.

- **Scan del/add (TK-760G only)**

This key switches the currently displayed channel between "Delete" and "Add".

The "Add" channel contained in the scan sequence, and "Delete" channel is not contained. In the scan mode, this key switches the channnel delete or add temporarily.

- **Talk around**

Press this key, the transceiver uses the receive frequency and the tone for transmission.

The operator can call the other party directory (without repeater). Press this key again, the talk around function goes off.

- **Volume up/down**

When the key is pressed, the volume level is increased/decreased and repeats if held for 200ms or longer.

- **None**

Sounds error operation beep, and no action will occur. Use this function when the transceiver is required to be more simple operated.

4. Scan Operating (TK-760G only)

■ Scan types

- **Single group scan**

You can scan all valid (ADD) channels in the displayed group that can be selected with the group up/down key.

- **Multiple group scan**

You can scan all valid (ADD) channels in the all valid (ADD) group.

OPERATING FEATURES

■ SCAN start condition

One or more non-priority channels must be added to all channels that can be scanned. The transceiver must be in normal receive mode (PTT off).

When you activate the key programmed to the scan function, the scan starts. The scan icon "SCN" lights and "SCAN" is indicated on alphanumeric display.

■ Scan stop condition

The scan stops temporarily if the following conditions are satisfied.

1) A carrier is detected, then signalling matches on channels for which receive the signalling is set by the programming software.
2) A carrier is detected on the channels for which receiving signalling is not set by the programming software or when the monitor (signalling cancel) function is activated.

■ Scan channel types

1) Priority channel is the most important channel for the scan, and always detects a signal during scan and when the scan stops temporarily.
2) Non-priority channels detects a signal during scan. For the channels that can be selected with the group or channel up/down key when the scan does not occur, adds an indicator "A" lights.

■ Priority channel setting

A priority channel can be set as follows with the programming software (KPG-56D).

1) Specify a priority channel as a fixed priority channel.
2) Make a selected channel, a priority channel.

■ Scan type according to the priority channel

1) When no priority channel is set : Only the non-priority channels are scanned.

If a non-priority channel stops temporarily, it stops until there is no signal on the channel.

2) When priority channel is set : Either priority channel is scanned.

   If a non-priority channel stops temporarily, a priority channel signal is detected at certain intervals.

   If a priority channel stops temporarily, it stops until there is no signal on the priority channel.

■ Revert channel

The revert channel is used to transmit during scanning and set by the programming software (KPG-56D).

1) Priority

   The transceiver reverts to the priority channel.
2) Priority with talkback

   The transceiver reverts to the priority channel.

   If you press PTT during a resume timer (dropout delay time, TX dwell time) or calling, you can transmit on current channel to answer to the call however revert channel is set to priority channel.

   After resume time, scan re-starts and transmission channel is return to priority channel.
3) Selected channel

   The transceiver reverts to the channel before scanning or the channel that you changed during scan.
4) Last called channel

   The transceiver reverts to the last called channel during the scan.
5) Last used channel

   The transceiver reverts to the last used (transmitted) channel during scan. "Last used" revert channel includes talkback function.
6) Selected with talkback

   The transceiver reverts to the channel before scanning or the channel that you changed during scan.

■ Scan end

When you reactivate the key programmed to the scan function during scan mode, the scan ends.

The scan icon "SCN" and "SCAN" display goes off.

■ Temporarily delete/add

It is possible to delete or add channel temporarily during scan. When scan stops on unnecessary channel for example by interference of the other party, activate the delete/add function (for example press the key), then that channel is deleted temporarily and scan re-start immediately.

When you would like to add the deleted channel temporarily to scan sequence, select the desired (deleted) channel during scan, activate the delete/add function (for example press the key) before scan re-start.

That channel is added temporarily to scan sequence. The temporary deleted or added channels are returns to pre-set delete/add, when the transceiver exits from scan mode.

5. Details of Features

■ Time-out timer

The time-out timer can be programmed in 15 seconds increments from 15 seconds to ten minutes. If the transmitter is keyed continuously for longer than the programmed time, the transmitter is disabled and a warning tone sounds while the PTT button is held down. The alert tone stops when the PTT button is released.

■ PTT ID

PTT ID provides a DTMF ANI to be sent with every time PTT (beginning of transmission, end of transmission, or both).

You can program PTT ID "on" or "off" for each group. The contents of ID are programmed for each channel.

The timing that the transceiver sends ID is programmable.

BOT : DTMF ID (BOT)/MSK ID is sent on beginning of transmission.

EOT : DTMF ID (EOT)/MSK ID is sent on end of transmission.

Both : DTMF ID (BOT)/MSK ID is sent on beginning of transmission and DTMF ID (EOT)/MSK ID is sent on end of transmission.

OPERATING FEATURES

■ Off hook decode

If the Off hook decode function has been enabled, removing and replacing the microphone on the hook has no effect for decoding QT/DQT and option signalling.

■ "TOT" pre-alert

The transceiver has "TOT pre-alert timer. This parameter selects the time at which the transceiver generates "TOT" pre-alert tone before "TOT" is expired.

"TOT" will be expired when the selected time passes from a TOT pre-alert tone.

■ "TOT" re-key time

The transceiver has "TOT" re-key timer. This timer is the time you can not transmit after "TOT" exceeded. After "TOT" re-key time expired you can transmit again.

■ "TOT" reset time

The transceiver has "TOT" reset timer. This timer is the minimum wait time allowed during a transmission that will reset the "TOT" count.

"TOT" reset time causes the "TOT" to continue even after PTT is released unless the "TOT" reset timer has expired.

■ OST (Operator Selectable Tone) (TK-760G K market models only)

The transceiver is capable to have "OST" function and 16 tone pair (QT/DQT).

■ Clear to transpond

The transceiver waits the transpond of 2-tone /DTMF if channel is busy until channel open. This feature prevents the interference to other party.

6. Option Signalling (DTMF/2-Tone)

Built-in DTMF decoder is available for option signalling.

Built-in 2-tone decoder is available for option signalling.

It is possible to use individual call, group call, D.B.D. (Dead Beat Disable). D.B.D. is used with DTMF only.

If the option signalling matches, a predetermined action will occur.

If option signalling matches on a group/channel which is set up with option signalling, the option signalling indicator (CALL) will flash and option signalling will be released. The transpond or alert tone will sound.

The orange LED will flash.

While option signalling matches (or if option signalling is deactivated when you are transmitting), you can mute or unmute QT/DQT/Carrier.

■ AND/OR

You can select AND or OR for option signalling match conditions.

	Alert/Transpond
AND	QT/DQT+DTMF (2-tone); Option matches = Action
OR	QT/DQT+DTMF (2-tone); Option matches = Action
	AF mute open
AND	QT/DQT+DTMF (2-tone); Option matches = Action
OR	QT/DQT/ID; Signalling only matches = Action

With OR set up, alert/transpond will not function with only DTMF.

With OR set up, AF mute will not release when only DTMF matches.

With a conventional channel not set up with QT or DQT, only the carrier is considered when signalling matches.

■ Auto Reset

If option signalling matches a group set up with option signalling, option signalling is released. After matching option signalling, option signalling will temporarily reset automatically.

■ Dead Beat Disable

If the D.B.D. code matches, a predetermined action will occur. Whether option signalling is activated or not, when D.B.D. matches on any channel, the transceiver will become TX inhibited or TX/RX inhibited. While D.B.D. is active, if the D.B.D. code + "#" code is received, D.B.D. will disactivate.

When D.B.D. matches, transpond will function. Alert will not be output, and option signalling match icon will not appear.

7. Audible User Feedback Tones

The transceiver outputs various combinations of tones to notify the user of the transceiver operating state. The main tones are listed below.

The high tone is 1477Hz, the mid tone is 941Hz, and the low tone is 770Hz.

■ Power on tone

This tone is output when the transceiver is turned on. (The high tone is output for 500ms.)

■ Alert tone

This tone is output when the transceiver is TX inhibition for TOT, and PLL unlocked. It is output until the PTT button is released.

■ DBD on tone

When a D.B.D. code is received, transpond tone sounds.

■ DBD off tone

When a D.B.D. release code is received, transpond tone sounds.

OPERATING FEATURES / REALIGNMENT

■ **Busy tone**
Sounds in conventional mode, when busy channel lock-out is functioning. You can select yes or no for the optional feature's warning tone.

■ **Group call tone**
Sounds when a group call with the correct DTMF/2-tone option signalling is received, repeats 7 times. You can select yes or no for the optional feature's warning tone.

■ **Individual call tone**
Sounds when an individual call with the correct DTMF/2-tone option signalling is received. You can select yes or no for the optional feature's warning tone.

■ **Key press tone [A]**
Sounds when a key is pressed. For toggle keys, sounds when toggle function is turned on (key press tone [B] sounds when it is turned off). You can select yes or no for the optional feature's control tone.

■ **Key press tone [B]**
Sounds when a key is pressed. For toggle keys, sounds when the toggle function is turned off (key press tone [A] sounds when it is turned on). You can select yes or no for the optional feature's control tone.

■ **Key input error tone**
Sounds when a key is pressed but that key cannot be used. You can select yes or no for the optional feature's warning tone.

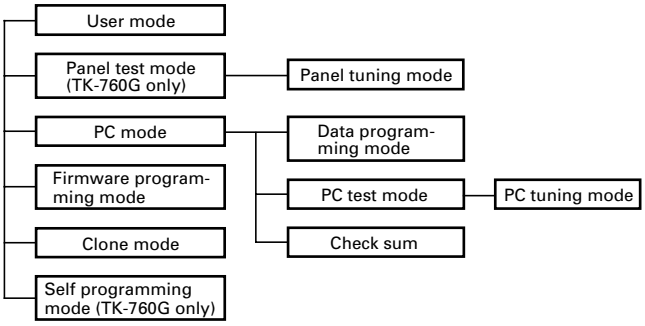
■ **Roll over tone**
Sounds in Conventional format at the smallest group/channel. You can select yes or no for the optional feature's control tone.

■ **Transpond tone**
Sounds when an individual call with the correct DTMF/2-tone option signalling is received. For group calls, only the group tone will sound, not the transpond tone.

■ **Pre alert tone**
Sounds prior to the TOT TX inhibit activation. If TOT pre alert is set, the tone sounds at the amount of time programmed, before the TOT expires (TOT time – TOT pre alert time = Pre alert tone sounding time). You can select yes or no for the optional feature's warning tone.

REALIGNMENT

1. Modes



Mode	Function
User mode	For normal use.
Panel test mode	Used by the dealer to check the fundament characteristics.
Panel tuning mode	Used by the dealer to tune the radio.
PC mode	Used for communication between the radio and PC (IBM compatible).
Data programming mode	Used to read and write frequency data and other features to and from the radio.
PC test mode	Used to check the radio using the PC. This feature is included in the FPU. See panel tuning.
Firmware programming mode	Used when changing the main program of the flash memory.
Clone mode	Used to transfer programming data from one radio to another.
Self programming mode	Frequency, signalling and features write to the radio.

2. How to Enter Each Mode

Mode	Operation
User mode	Power ON
Panel test mode	[SCN]+Power ON (Two seconds)
PC mode	Received commands from PC
Panel tuning mode	[Panel test mode]+[SCN]
Firmware programming mode	[CH▲]+Power ON (Two seconds)
Clone mode	[▼]+Power ON (Two seconds)
Self programming mode	[A]+Power ON (Two seconds)

3. For the Panel Test Mode (TK-760G only)

Setting method refer to ADJUSTMENT.

3-1. For the Panel Tunning Mode

Setting method refer to ADJUSTMENT.

REALIGNMENT

4. Check Sum

Executing this function, "TUNING" apears on the display of the TK-760G while calculation the check sum.

When the calculation is completed, the display returns to normal and PC displays the check sum of the radio.

5. PC Mode

5-1. Preface

The TK-760G/762G transceiver is programmed using a personal computer, a programming interface (KPG-46) and programming software (KPG-56D).

The programming software can be used with an IBM PC or compatible. Figure 1 shows the setup of an IBM PC for programming.

5-2. Connection Procedure

1. Connect the TK-760G/762G to the personal computer with the interface cable.
2. When the Power is switched on, user mode can be entered immediately. When the PC sends a command, the radio enters PC mode.
   When data is transmitted from transceiver, the red LED blink.
   When data is received by the transceiver, the green LED blink.

Notes :

- The data stored in the personal computer must match model type when it is written into the flash memory.
- Change the TK-760G/762G to PC mode, then attach the interface cable.

5-3. KPG-46 Description (PC programming interface cable : Option)

The KPG-46 is required to interface the TK-760G/762G to the computer. It has a circuit in its D-subconnector (25-pin) case that converts the RS-232C logic level to the TTL level.

The KPG-46 connects the modular microphone jack of the TK-760G/762G to the computers RS-232C serial port.

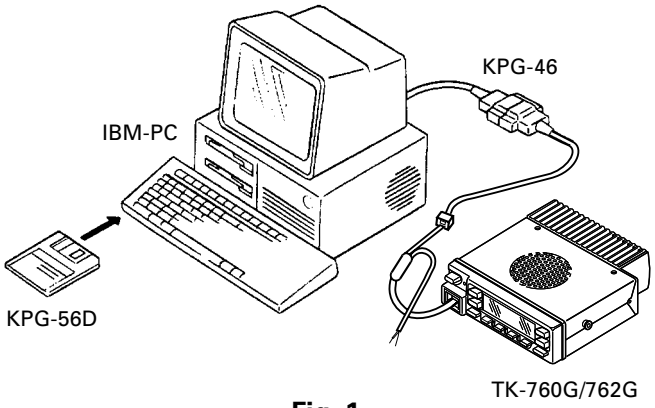


Fig. 1

5-4. Programming Software Description

The KPG-56D programming disk is supplied in 3-1/2" disk format. The software on this disk allows a user to program TK-760G/762G radio via a programming interface cable (KPG-46).

5-5. Programming With IBM PC

If data is transferred to the transceiver from an IBM PC with the KPG-56D, the destination data (basic radio information) for each set can be modified. Normally, it is not necessary to modify the destination data because their values are determined automatically when the frequency range (frequency type) is set.

The values should be modified only if necessary. Data can be programmed into the flash memory in RS-232C format via the modular microphone jack.

6. Firmware Programming Mode

6-1. Preface

Flash memory is mounted on the TK-760G/762G. This allows the TK-760G/762G to be upgraded when new features are released in the future. (For details on how to obtain the firmware, contact Customer Service.)

6-2. Connection Procedure

Connect the TK-760G/762G to the personal computer (IBM PC or compatible) with the interface cable (KPG-46). (Connection is the same as in the PC Mode.)

6-3. Programming

1. Start up the programming software (KPG-56D), select "firmware program" in the "Program" item, and press the Return key on your personal computer. This starts up the firmware programmer.
2. The top screen is displayed. Press any key to advance to the next screen.
3. Set the communications speed (normally, 57600 bps) and communications port in the Setup item.
4. Set the firmware to be updated by File select (=F1).
5. Turn the TK-760G/762G Power ON with the [CH∧] switch held down. Hold the switch down for two seconds until the display changes to "PROG 576", the BUSY/TX LED lights orange. When "PROG 576" appears, release your finger from the switch.
6. Check the connection between the TK-760G/762G and the personal computer, and make sure that the TK-760G/762G is in Program mode.
7. Press F10 on the personal computer. A window opens on the display to indicate the writing progress. When the TK-760G/762G starts to receive data, the BUSY/TX LED lights green.
8. If writing ends successfully, the LED on the TK-760G/762G goes off and the checksum is displayed.
   (Since the TK-762G does not have a display, check the checksum with the FPU (KPG-56D).)
9. If you want to continue programming other TK-760G/762G, repeat steps 5 to 8.

REALIGNMENT

Notes :

- To start the Firmware Programmer from KPG-56D, the FPRO path must be set up by the KPG-56D setup.
- This mode cannot be entered if the Firmware programming mode is set to Disable in the Programming software (KPG-56D).
- When programming the firmware, it is recommend to copy the data from the floppy disk to your hard disk before you update the radio firmware.
  Directly copying from the floppy disk to the radio may not work because the access speed is too slow.

6-4. Function

1. If you press the [MON] switch while "PROG 576" is displayed, the checksum is displayed. If you press the [MON] switch again (while the checksum is displayed), "PROG 576" is redisplayed.
2. If you press the [A] switch while "PROG 576" is displayed, the display changes to "PROG 192" to indicate that the write speed is low speed (19200 bps). If you press the [A] switch again while "PROG 192" is displayed, the display changes to "PROG 384", and the write speed becomes the middle speed (38400 bps). If you press the [A] switch again while "PROG 384" is displayed, the display returns to "PROG 576".

Note :

TK-762G indicate
19200 bps : The LED flashes green and red alternately.
38400 bps : The LED flashes orange.
57600 bps : The LED lights orange.
Normally, write in the high-speed mode.

7. Clone Mode

Programming data can be transferred from one radio to another by connecting them via their modular microphone jacks. The operation is as follows (the transmit radio is the master and the receive radio is the slave).

1. Turn the master TK-760G power ON with the [▼] key held down. The TK-760G displays "CLONE".
2. Power on the slave TK-760G/762G.
3. Connect the cloning cable (No. E30-3382-05) to the modular microphone jacks on the master and slave.
4. Press the [SCN] key on the master while the master displays "CLONE". The data of the master is sent to the slave. While the slave is receiving the data, "–PC–" is displayed. When cloning of data is completed, the master displays "END", and the slave automatically operates in the User mode. The slave can then be operated by the same program as the master.
5. The other slave can be continuously cloned. When the [SCN] key on the master is pressed while the master displays "END", the master displays "CLONE". Carry out the operation in step 2 to 4.

Note :

You can clone the programmed data between the transceiver listed below. Frequency version must be same.

Slave / Master	TK-260G K TK-270G K	TK-260G M TK-270G M	TK-760G K TK-762G K	TK-760G M TK-762G M	TK-760G K2 TK-762G K2	TK-260G K2 TK-270G K2	TK-270G M2
TK-760G K	YES	NO	YES	NO	NO	NO	NO
TK-760G M	NO	YES	NO	YES	NO	NO	NO
TK-760G K2	NO	NO	NO	NO	YES	YES	NO

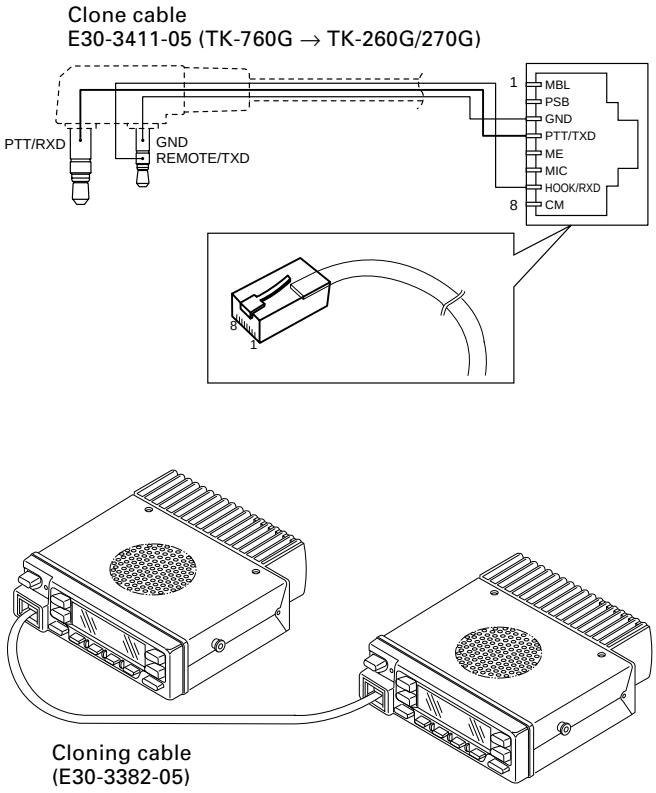

Fig. 2

8. Self Programming Mode (TK-760G only)

Write mode for frequency data and signalling etc. Mainly used by the person maintaining the user equipment.

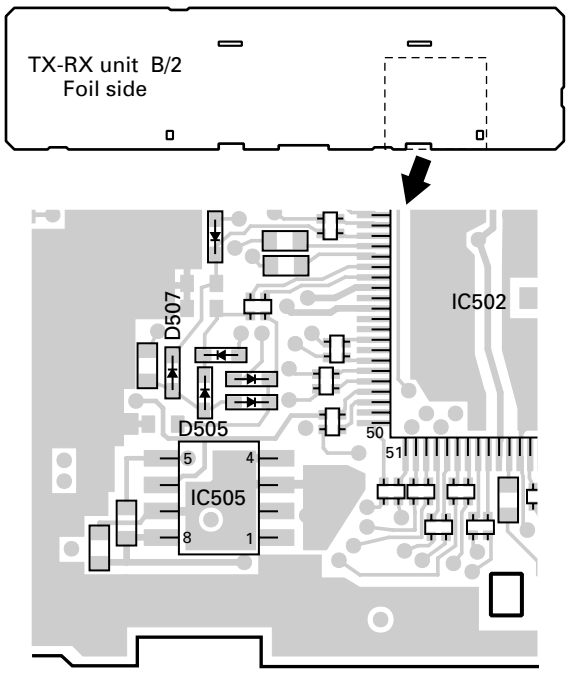
8-1. Enter to the Self Programming Mode

Remove D507 (Figure 3) from the TX-RX unit. Hold down the [A] key and turn the power switch on. When enter the self programming mode, "SELF" is displayed. The mode changes autoically to Model Select Mode in about one second, and set up radio type, radio band & channel type and frequency version.

REALIGNMENT

Note :

This mode (self programming mode) cannot be set when it has been disabled with the FPU.

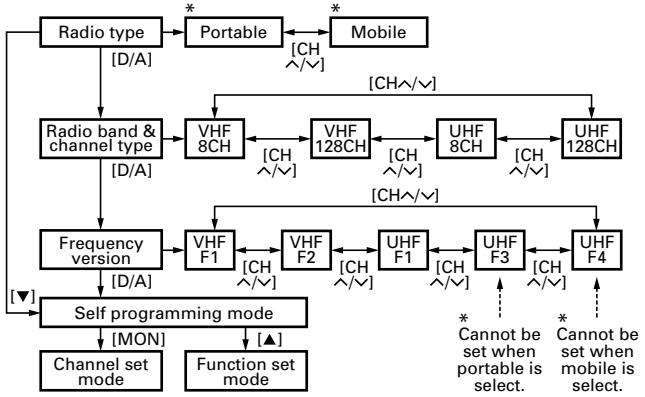


The silk screen of D505 and D507 is reversed on the TX-RX unit PCB (Part No. J72-0677-02). this silk screen will be corrected from the next version, J72-0677-12.

Fig. 3

8-2. Model Select Mode

- **Flow chart**



Note :

If the radio type of TK-760G was temporally set to "Portable" for the cloning purposes, "UNPROG" is displayed (at User mode) when the TK-760G is turned on.

In this case, please set the radio type back to "Mobile" at model select mode menu.

9. Channel Setting Mode

Each channel can be setup in its action mode by using the panel keys.

- Pressing [MON] when "SELF" is diaplyed, sets channel setting mode.
- Select an item set using [▼] then change the selection with the [CH^ /v].
- The data displayed using [D/A] is stored in the memory and then proceeds to the next item.
- Pressing [▼] proceeds to the next item without storing it in the memory.
- Press [MON] to set the display to "SELF" and return to reset (default) status.

The setup items fro channel setting mode are listed below.

No.	Function	Choices	Display	Remarks

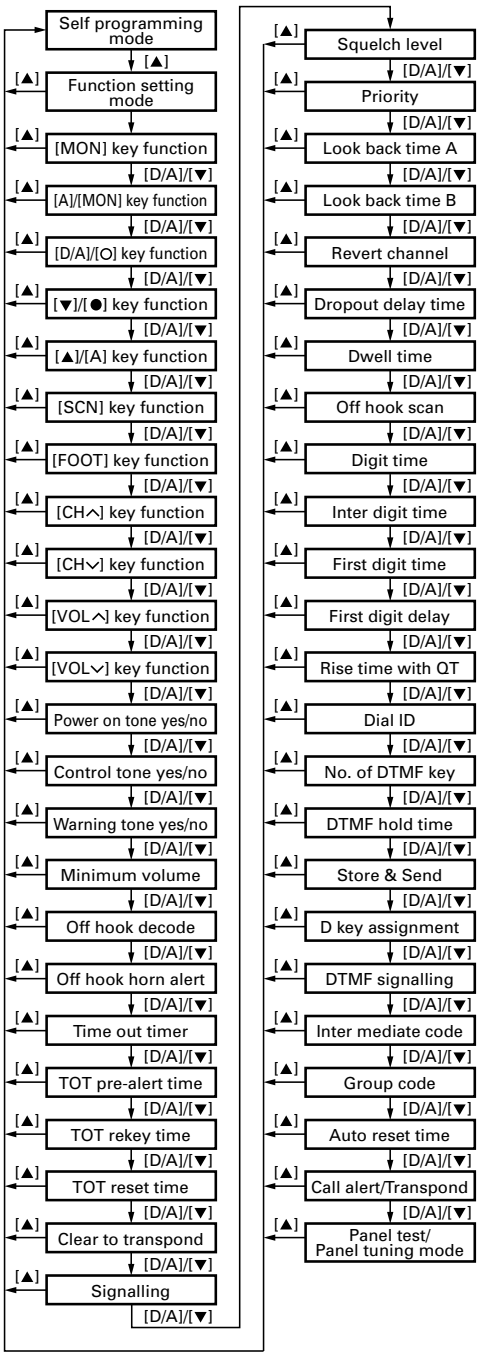
10-1. Flow Chart



11. Memory Reset Mode (TK-760G only)

You can clear all settings you made in self programming mode, or you can return to the original display.

- Press [SCN] while "SELF" is displayed will change the display to "CANCEL".
- Press [CH^/v] to change the display between "CANCEL" and "READY".
- When "READY" is displayed, pressing [SCN] will set all data to default, and "CLEAR" will appear on the display. Press [SCN] again to display "SELF".
- When "CANCEL" is displayed, pressing [SCN] will cancel the reset, and "SELF" will be displayed.

INSTALLATION

1. Accessory Connection Cable (KCT-19 : Option)

The KCT-19 is an accessory connection cable for connecting external equipment. The connector has 15 pins and the necessary signal lines are selected for use.

1-1. Installing the KCT-19 in the transceiver

1. Remove the upper and lower halves of the transceiver case, and lift the DC cord bushing (❶) from the chassis.
2. Remove the pad as shown in Figure 1 (❷).
3. Insert the KCT-19 cable (❸) into the chassis (❹). The wire harness band (❺) must be inside the chassis.
4. Replace the DC cord bushing (❻).
5. Connect the KCT-19 to the TX-RX unit (A/2) as shown in Figure 2 (❼).
6. Connect the KCT-19 to the external accessory by inserting the crimp terminal (❽) into the square plug (❾), both of which are supplied with the KCT-19.

3. Ignition Sense Cable (KCT-18 : Option)

The KCT-18 is an optional cable for enabling the ignition function. The ignition function lets you turn the power to the transceiver on and off with the car ignition key.

If you use the Horn Alert function or the Manual Relay function, you can turn the function off while driving with the ignition key.

3-1. Connecting the KCT-18 to the Transceiver

1. Install the KCT-19 in the transceiver. (See the KCT-19 section.)
2. Insert the KCT-18 lead terminal (❷) into pin 3 of the square plug (❶) supplied with the KCT-19, then insert the square plug into the KCT-19 connector (❸).

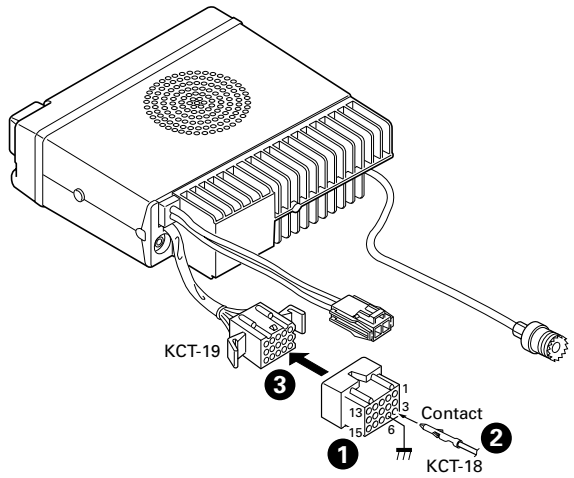

Fig. 3

INSTALLATION

3-2. Modifying the Transceiver

Modify the transceiver as follows to turn the power or the Horn Alert or Manual Relay function on and off with the ignition key.

1. Remove the lower half of the transceiver case.
2. Set jumper resistors (0Ω) R134 and R135 of the TX-RX unit (A/2) as shown in Table 1.

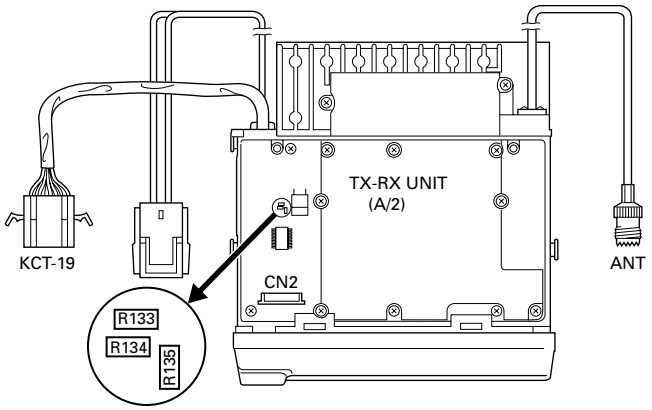

Fig. 4

Operation when KCT-18 is connected	R134	R135	
	Enable	Enable	← **KCT-18 cannot be connected**

Horn Alert or AUX-A on/off	Enable	Disable	
	Disable	Disable	← **Power cannot be turned on**

Table 1 R134 and R135 setup chart

4. PA/HA Unit (KAP-1 : Option)

4-1. Installing the KAP-1 in the Transceiver

The Horn Alert (max. 2A drive) and Public Address functions are enabled by inserting the KAP-1 W1 (3P; white/black/red) into CN3 on the TX-RX unit, inserting W2 (3P; green) into CN7 on the TX-RX unit, and connecting the KCT-19 (option) to CN2 and CN3 of the KAP-1.

- **Installation procedure**

1. Open the upper case of the transceiver.
2. Insert the two cables (❶) with connectors from the KAP-1 switch unit into the connectors on the transceiver.
3. Secure the switch unit board to the chassis with a screw (❸). The notch (❷) in the board must be placed at the front left side.
4. Attach the cushion on the top of the KAP-1 switch unit.

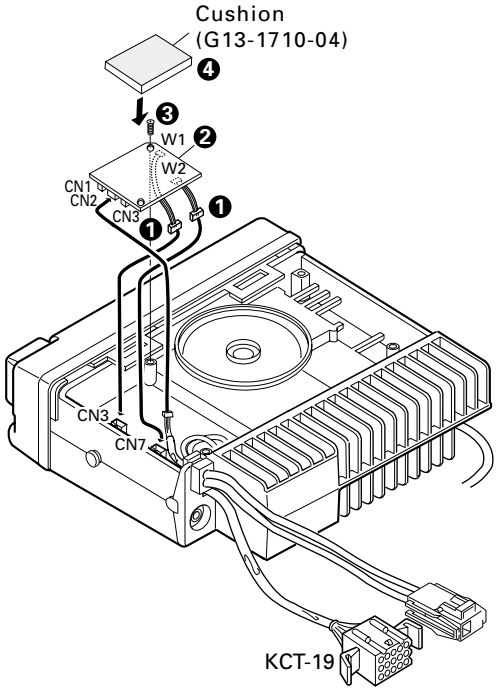

Fig. 5

5. Fitting the Control Panel Upside Down

The TK-760G/762G control panel can be fitted upside down, so the transceiver can be mounted with its internal speaker (in the upper half of the case) facing down in your car.

1. Remove the control panel and the TX-RX unit (B/2) control section. (Fig. 6)

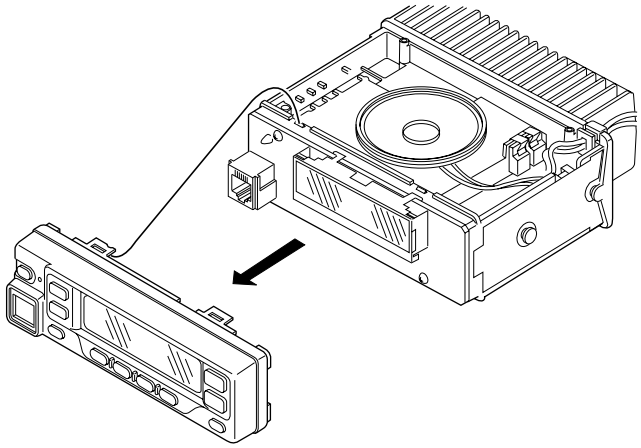

Fig. 6

INSTALLATION

2. Fold the flat cable (❶) in the opposite direction (❷).
3. Rotate the control section (❸) 180 degrees (❹).
4. Insert the flat cable into the control section connector, CN501 (❺).
5. Mount the control section on the transceiver (❻).

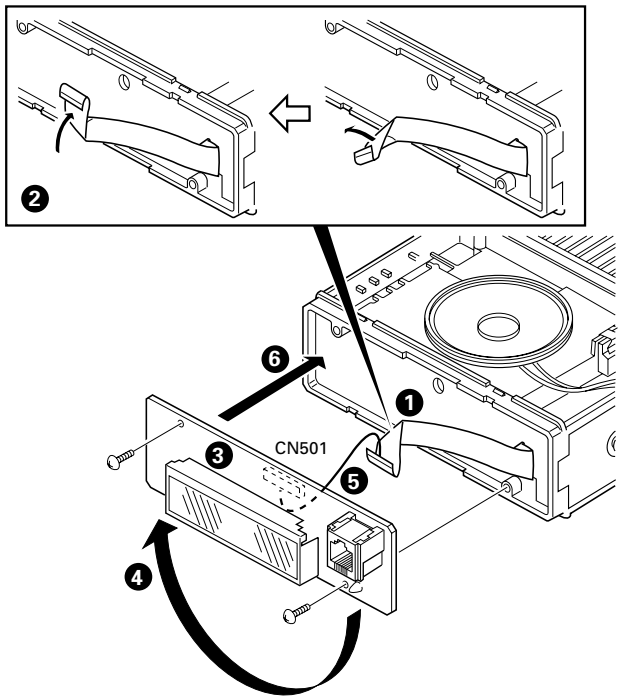

Fig. 7

6. Rotate the control panel 180 degrees and mount it on the transceiver. Refit the two halves of the case to complete installation. (Fig. 8)

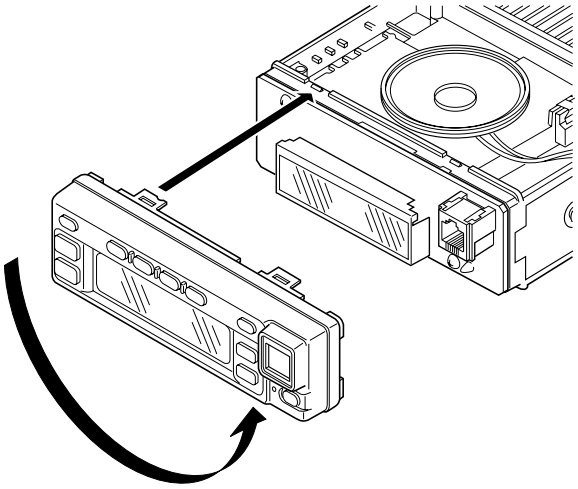

Fig. 8

6. External Speaker

6-1. KES-3 : Option

The KES-3 is an external speaker for the 3.5-mm-diameter speaker jack.

- **Connection procedure**

1. Connect the KES-3 to the 3.5-mm-diameter speaker jack on the rear of the transceiver.

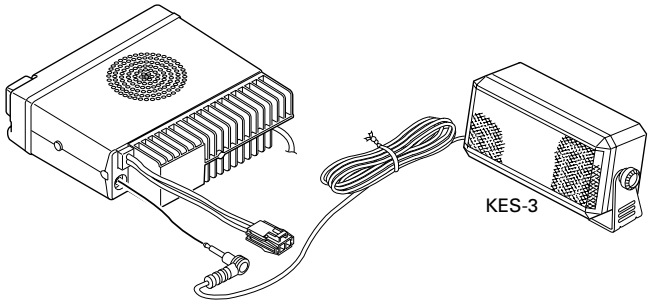

Fig. 9

6-2. KES-4 : Option

The KES-4 is an external speaker used with the accessory connection cable.

- **Connection procedure**

1. Install the KCT-19 in the transceiver. (See the KCT-19 section.)
2. Insert the crimp terminal into the square plug supplied with the KCT-19.
3. Connect CN8 of the transceiver to connector C of the KCT-19 instead of to the internal speaker connector.

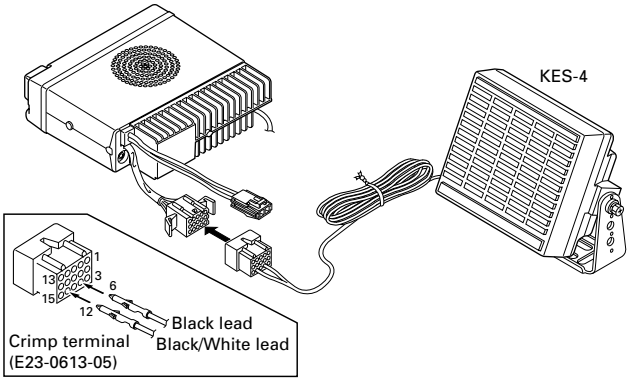

Fig. 10

CIRCUIT DESCRIPTION

Frequency Configuration

The receiver utilizes double conversion. The first IF is 49.95MHz and the second IF is 450kHz. The first local oscillator signal is supplied from the PLL circuit.

The PLL circuit in the transmitter generates the necessary frequencies. Figure 1 shows the frequencies.

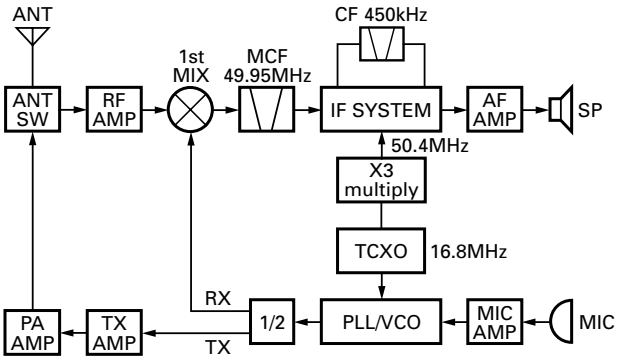

Fig. 1 Frequency configuration

Receiver System

The receiver is double conversion superheterodyne. The frequency configuration is shown in Figure 1.

■ Front-end RF Amplifier

An incoming signal from the antenna is applied to an RF amplifier (Q27) after passing through a transmit/receive switch circuit (D33 and D34 are off) and a band pass filter (L18). After the signal is amplified (Q27), the signal is filtered through a band pass filter (L11, L13 and L15) to eliminate unwanted signals before it is passed to the first mixer. Band pass filters (L18, L11, L13 and L15) have varactor diodes (D30, D31, D18, D23 and D28).

The voltage of these diodes are controlled by to track the CPU (IC502) center frequency of the band pass filter. (See Fig. 2)

■ First Mixer

The signal from the RF amplifier is heterodyned with the first local oscillator signal from the PLL frequency synthesizer circuit at the first mixer (Q15) to create a 49.95MHz first intermediate frequency (1st IF) signal. The first IF signal is then fed through two monolithic crystal filters (MCFs : XF1) to further remove spurious signals.

■ IF Amplifier

The first IF signal is amplified by Q13, and the enters IC5 (FM processing IC). The signal is heterodyned again with a second local oscillator signal within IC5 to create a 450kHz second IF signal. The second IF signal is then fed through a 450kHz ceramic filter (Narrow : CF1, Wide : CF2) to further eliminate unwanted signals before it si amplified and FM detected in IC5.

Item	Rating
Nominal center frequency	49.95MHz
Pass bandwidth	±5.0kHz or more at 3dB
35dB stop bandwidth	±20.0kHz or less
Ripple	1.0dB or less
Insertion loss	5.0dB or less
Guaranteed attenuation	80dB or more at fo±1MHz
	Spurious : 40dB or more within fo±1MHz
Terminal impedance	350Ω±5% / 5.5pF±0.5pF

Table 1 Crystal filter (L71-0551-15) : XF1

Item	Rating
Nominal center frequency	450kHz
6dB bandwidth	±4.5kHz or more
50dB bandwidth	±10.0kHz or less
Ripple	2.0dB or less
Insertion loss	6.0dB or less
Guaranteed attenuation	55.0dB or more within fo±100kHz
Terminal impedance	2.0kΩ

Table 2 Ceramic filter (L71-0959-05) : CF1

Item	Rating
Nominal center frequency	450kHz
6dB bandwidth	±6.0kHz or more
50dB bandwidth	±12.5kHz or less
Ripple	3.0dB or less
Insertion loss	6.0dB or less
Guaranteed attenuation	35.0dB or more within fo±100kHz
Terminal impedance	2.0kΩ

Table 3 Ceramic filter (L72-0973-05) : CF2

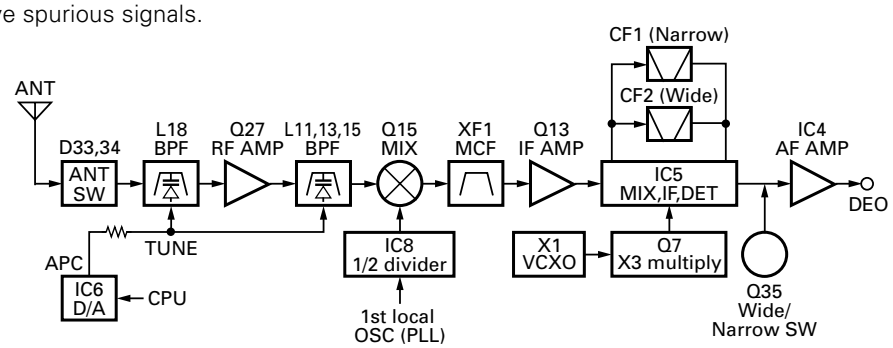

Fig. 2 Receiver system

CIRCUIT DESCRIPTION

■ Wide/Narrow Changeover Circuit

The W/N port (pin 4) of the shift register (IC510) is used to switch between ceramic filters. When the W/N port is high, Q4 turns on and the ceramic filter SW diode (D8, D10) CF1 turns on to receive a Narrow signal. At the same time, Q35 turns on and one of the filters is selected so that the wide and narrow audio output levels are equal.

When the W/N port is low, Q3 turns on and the ceramic filter SW diode (D8, D10) CF2 turns on to receive a Wide signal.

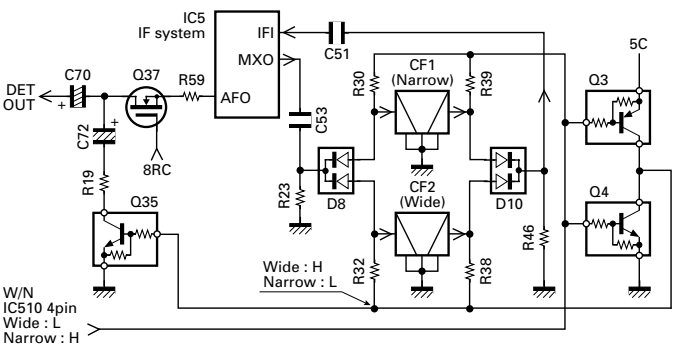

Fig. 3 Wide/Narrow changeover circuit

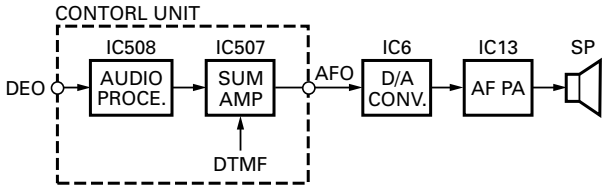
■ AF Signal System

The detection signal (DEO) from the TX-RX unit goes to the audio processor (IC508) of the control unit. The signal passes through a filter in the audio processor to adjust the gain, and is output to IC507. IC507 sums the AF signal and the DTMF signal, BEEP signal and returns the resulting signal to the TX-RX unit. The signal (AFO) sent to the TX-RX unit is input to the D/A converter (IC6). The AFO output level is adjusted by the D/A converter. The signal output from the D/A converter is input to the audio power amplifier (IC13). The AF signal from IC13 switches between the internal speaker and speaker jack (J1) output.



Flg. 4 AF signal system

■ Squelch Circuit

The detection output from the FM IF IC (IC5) passes through a band-pass filter and a noise amplifier (Q10) in the control unit to detect noise. A voltage is applied to the CPU (IC502). The CPU controls squelch according to the voltage (ASQ) level. The signal from the RSSI pin of IC5 is monitored. The electric field strength of the receive signal can be known before the ASQ voltage is input to the CPU, and the scan stop speed is improved.

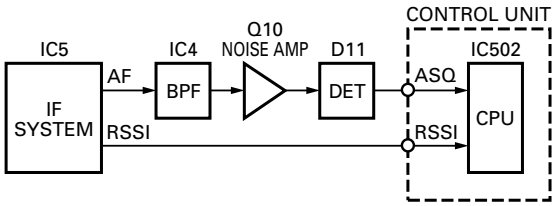


Fig. 5 Squelch circuit

PLL Frequency Synthesizer

The PLL circuit generates the first local oscillator signal for reception and the RF signal for transmission.

■ PLL

The frequency step of the PLL circuit is 5 or 6.25kHz. A 16.8MHz reference oscillator signal is divided at IC3 by a fixed counter to produce the 5 or 6.25kHz reference frequency. The voltage controlled oscillator (VCO) output signal is buffer amplified by Q106 (Sub-unit), then divided in IC3 by a dual-module programmable counter. The divided signal is compared in phase with the 5 or 6.25kHz reference signal in the phase comparator in IC3. The output signal from the phase comparator is filtered through a low-pass filter and passed to the VCO to control the oscillator frequency. (See Fig. 6)

■ VCO

The TK-760G/762G has VCO in a Sub-unit (A1) housed in a solid shielded case and connected to the TX-RX unit through CN101.

The operating frequency is generated by Q103 in transmit mode and Q101 in receive mode. The oscillator frequency is controlled by applying the VCO control voltage, obtained from the phase comparator, to the varactor diodes (D102 and D104 in transmit mode and D101 and D103 in receive mode). The RX (ST) pin is set low in receive mode causing Q102 to turn Q103 off, and turn Q101 on. The RX (ST) pin is set low in transmit mode. The outputs from Q101 and Q103 are amplified by Q106 and sent to the buffer amplifiers.

CIRCUIT DESCRIPTION

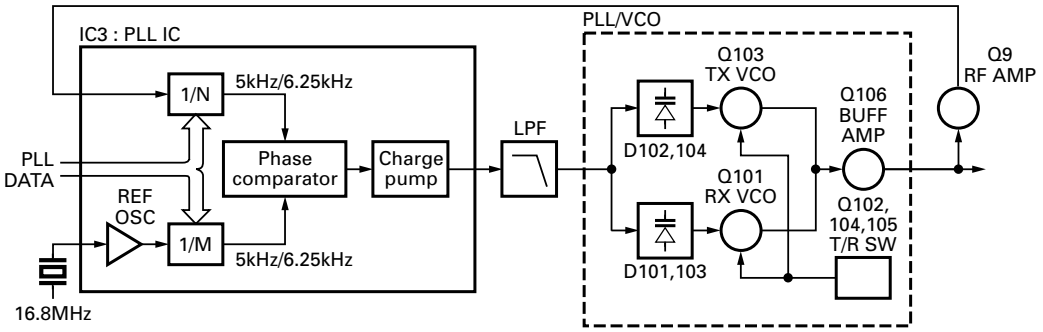

Fig. 6 PLL circuit

■ Unlock Circuit

During reception, the 8RC signal goes high, the 8TC signal goes low, and Q16 turns on. Q18 turns on and a voltage is applied to the collector (8R). During transmission, the 8RC signal goes low, the 8TC signal goes high and Q29 turns on. Q28 turns on and a voltage is applied to 8T.

The CPU in the control unit monitors the PLL (IC3) LD signal directly. When the PLL is unlocked during transmission, the PLL LD signal goes low. The CPU detects this signal and makes the 8TC signal low. When the 8TC signal goes low, no voltage is applied to 8T, and no signal is transmitted.

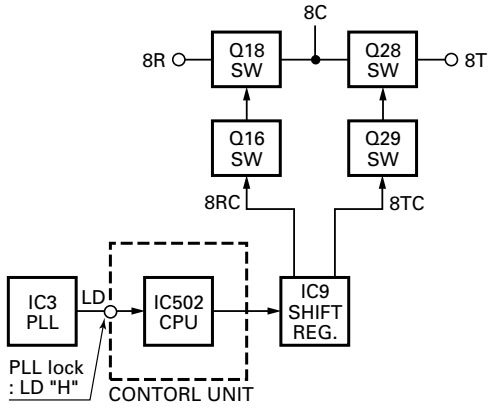

Fig. 7 Unlock circuit

Transmitter System

■ Outline

The transmitter circuit produces and amplifies the desired frequency directly. It FM-modulates the carrier signal by means of a varicap diode

■ Power Amplifier Circuit

The transmit output signal from the VCO is amplified to a specified level of the power module (IC400) by the drive block (Q22 and Q25). The amplified signal passes through the transmission/reception selection diode (D16) and goes to a low-pass filter. The low-pass filter removes unwanted high-frequency harmonic components, and the resulting signal is goes the antenna terminal.

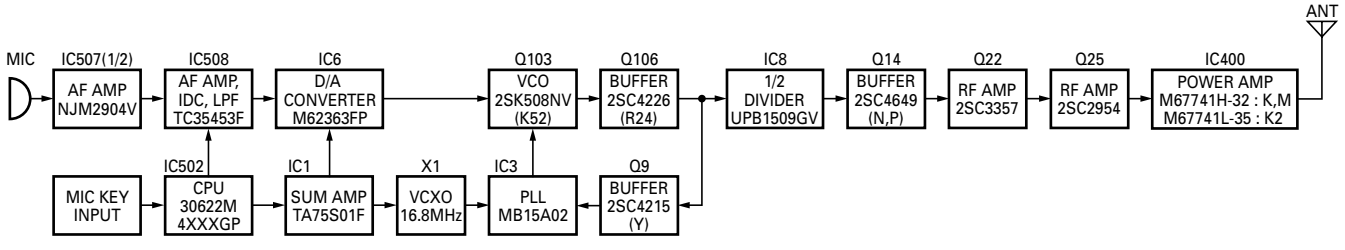

Fig. 8 Transmitter system

CIRCUIT DESCRIPTION

■ APC Circuit

The automatic transmission power control (APC) circuit detects part of a power module output with a diode (D35, D36) and applies a voltage to IC15. IC15 compares the APC control voltage (PC) generated by the D/A converter (IC6) and DC amplifier (IC7) with the detection output voltage to control Q31 and Q32, generates DB voltage from B voltage, and stabilizes transmission output.

The APC circuit is configured to protect over current of the power module due to fluctuations of the load at the antenna end and to stabilize transmission output at voltage and temperature variations.

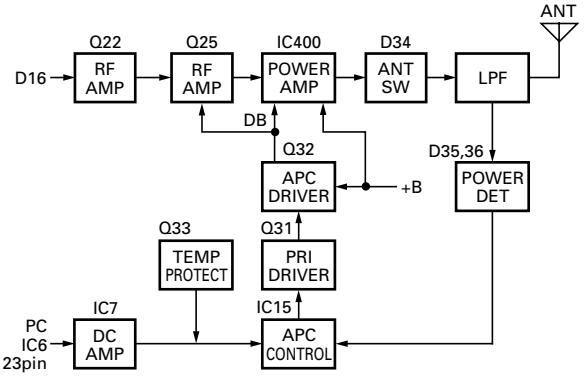

Fig. 9 APC circuit

Control Circuit

The CPU carries out the following tasks:

1) Controls the shift register (IC9, IC510) AF MUTE, WIDE/NARROW, T/R KEY outputs.
2) Adjusts the AF signal level of the audio processor (IC508) and turns the filter select compounder on or off.
3) Controls the DTMF decoder (IC511).
4) Controls the LCD assembly display data.
5) Controls the PLL (IC3).
6) Controls the D/A converter (IC6) and adjusts the volume, modulation and transmission power.

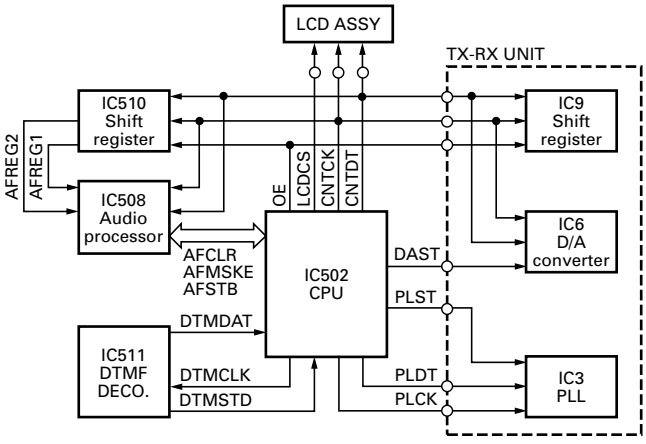

Fig. 10 Control circuit

■ Memory Circuit

The transceiver has a 2M-bit (256k x 8) flash ROM (IC501) and an 8k-bit EEPROM (IC505). The flash ROM contains firmware programs, data and user data which is programmed with the FPU. The EEPROM contains adjustment data. The CPU (IC502) controls the flash ROM through an external address bus and an external data bus. The CPU controls the EEPROM through two serial data lines.

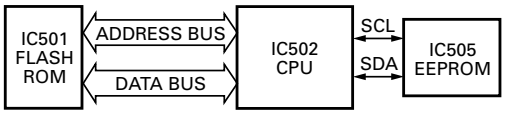

Fig. 11 Memory circuit

■ Display Circuit

The CPU (IC502) controls the shift register (IC510) and display LEDs. When the LED1 line goes high when the transceiver is busy, Q508 turns on and the green LED on D521 lights. In transmit mode, the LED0 line goes high, Q504 turns on and the red light lights. Backlighting LEDs for the key operation unit (D509~D514) and LCD are provided.

When the MBL line goes high, Q506 turns on, then Q505 turns on, and the key illumination LED lights. A voltage is applied to the MBL line to turn on the LCD backlight.

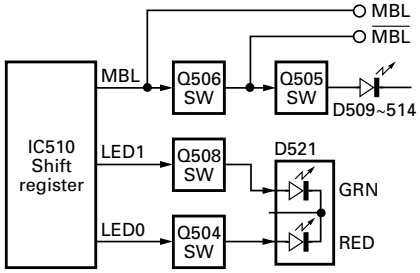

Fig. 12 Display circuit

■ Key Matrix Circuit

The TK-760G/762G front panel has function keys. Each of them is connected to a cross point of a matrix of the KIN0 to KOUT2 ports of the microprocessor. The KOUT0 to KOUT2 ports are always high, while the KIN0 to KIN2 ports are always low.

The microprocessor monitors the status of the KIN0 to KOUT2 ports. If the state of one of the ports changes, the microprocessor assumes that the key at the matrix point corresponding to that port has been pressed.

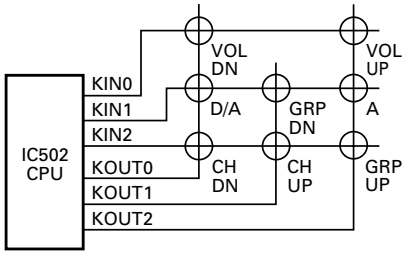

Fig. 13 Key matrix circuit

CIRCUIT DESCRIPTION

■ Encode

The QT and DQT signals are output from TO of the CPU (IC502) and summed with the external pin DI line by the summing amplifier (IC2) and the resulting signal goes to the D/A converter (IC6) of the TX-RX unit. The DTMF and 2-TONE signals are output from DTMF of the CPU and goes to the audio processor (IC508). The signal is summed with a MIC signal by the audio processor (IC508), and the resulting signal passes through an analog switch (IC509) and goes to the TX-RX unit (MO).

The D/A converter (IC6) adjusts the MO level and the balance between the MO and TO levels. Part of a TO signal is summed with MO and the resulting signal goes to the MD pin of the VCO. This signal is applied to a varicap diode in the VCO for direct FM modulation.

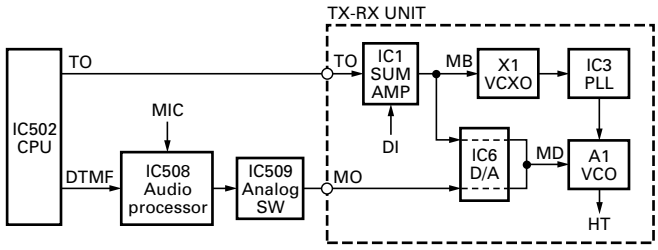

Fig. 14 Encode

■ Decode

• QT/DQT/DTMF

The signal (DEO) detected by the TX-RX unit passes through two low-pass filters of IC513, goes to TOI of the CPU (IC502) to decode QT, DQT. The DTMF signal is decoded by a dedicated IC (IC511) and the resulting signal is sent to the CPU (IC502) as serial data.

• 2-tone

The detected signal passes through audio processor (IC508) RX OUT. Then it is filtered through IC504 2-stage low-pass filtered to enter CPU (IC502) to decode 2-tone signalling.

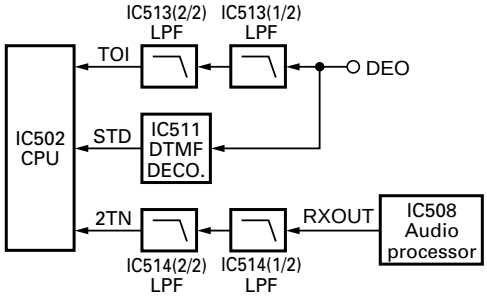

Fig. 15 Decode

■ D/A Converter

The D/A converter (IC6) is used to adjust TONE and MO modulation, AF volume, TV voltage, FC reference voltage, and PC POWER CONTROL voltage level.

Adjustment values are sent from the CPU as serial data. The D/A converter has a resolution of 256 and the following relationship is valid:

D/A output = (Vin – VDAref) / 256 x n + VDAref
Vin: Analog input
VDAref: D/A reference voltage
n: Serial data value from the microprocessor (CPU)

Power Supply Circuit

When the POWER switch on the control unit is pressed, the PSW signal goes low. This signal is inverted by Q26 and sent to a flip-flop IC (IC14). This IC outputs a control signal when the PSW goes low. When the power turns on, pin 1 of IC14 outputs a low signal and Q20 turns on. The base of Q19 goes high, Q19 turns on, SB SW (Q23) turns on and power (SB) is supplied to the set.

This circuit has an overvoltage protection circuit. If a DC voltage of 20 V or higher is applied to the power cable, D21 turns on and a voltage is applied to the base of Q21. This voltage turns Q21 on and turns Q19 and SBSW off.

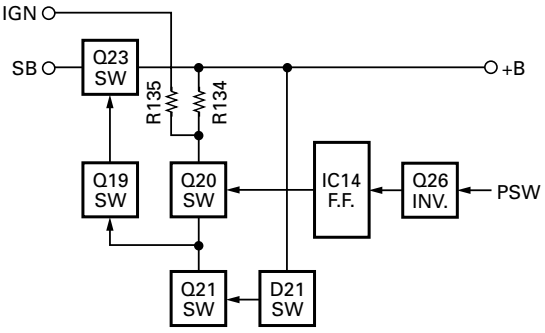

Fig. 16 Power supply circuit

36~38	COM1~COM3	O	Common driver output. Frame frequency fo=(fosc/384)Hz
39	VDD	–	Power supply for logic section (2.7V~6.0V).
40	VLCD	–	Power supply for LCD driver section (2.7V~6.0V).
41	VLCD1	I	Apply 2/3 the LCD drive bias voltage from outside. If 1/2 the bias is applied, connect to VLCD2.
42	VCLD2	I	Apply 1/3 the LCD drive bias voltage from outside. If 1/2 the bias is applied, connect to VLCD1.
43	VSS	–	GND.
44	OSC	I/O	Oscillation terminal.
45	$\overline{INH}$	I	Force the display to turn off regardless of internal data. Serial data can be input regardless of whether it is "H" or "L".
46	CE	I	Chip enable. Serial data transfer terminal. Connected to the microprocessor.
47	CL	I	Synchronizing clock. Serial data transfer terminal. Connected to the microprocessor.
48	DI	I	Transfer data. Serial data transfer terminal. Connected to the microprocessor.

DESCRIPTION OF COMPONENTS

Display Unit (X54-3270-10) : TK-760G

Ref. No.	Use/Function	Operation/Condition
D801	Reverse current prevention	
D802~805	Light emission	
D808	Current stability	
IC801	LCD driver	
Q801	DC switch (LED)	

Display Unit (X54-3280-10) : TK-762G

Ref. No.	Use/Function	Operation/Condition
D801	Light emission	
D802	Reverse current prevention	
D803,804	Light emission	
IC801	LCD driver	
Q801~809	DC switch (LED)	

TX-RX Unit (X57-5950-XX)

-10 : TK-760G K -11 : TK-762G K -12 : TK-760G K2
-13 : TK-762G K2 -21 : TK-760G M

Ref. No.	Use/Function	Operation/Condition
D1	Surge absorption	
D2	Voltage reference	
D3~5	Surge absorption	
D8	IF switch (Wide/narrow)	
D9	DC switch	
D10	IF switch (Wide/narrow)	
D11	Noise amp detect	
D14	Surge absorption	
D15	OR gate	SP mute, AM
D16	RF switch (TX/RX)	Heterodyne
D17	Temperature compensation	Drive
D18	RF BPF tuning	
D19	Surge absorption	
D20	Reverse current prevention	
D21	Voltage reference	
D22	Temperature compensation	Drive
D23	RF BPF tuning	
D24	Voltage reference	
D25	Surge absorption	
D27	Reverse current prevention	
D28	RF BPF tuning	
D29	Reverse current prevention	
D30,31	RF BPF tuning	
D33,34	ANT switch	
D35,36	APC voltage detect	
D39	Voltage reference	Power protection
D40	Charge	DEO
D41	Voltage drop	Charge pump
D501	Reverse current prevention	KOUT 0
D502	Reverse current prevention	KOUT 1
D503	Reverse current prevention	KOUT 2
D504	Reverse current prevention	KOUT 0
D505	Reverse current prevention	KOUT 1
D506	Voltage discharger	When powering down
D507	Reverse current prevention	KOUT 2
D508	Limiter	MIC
D509~514	Key backlight	Active while MBL is H
D521	Busy/TX LED	Lights green while busy, red while TX
D523	OR gate	MIC mute, MM, MM2
D524	Surge absorption	HOOK/RXD
D525	Surge absorption	PTT/TXD
D526	Current protection	
D527	Surge absorption	CM
D528	Surge absorption	MBL
D529	Limiter	QT/DQT decode limiter
IC1	Sum amplifier	DI, TO mixer
IC2	DC amplifier	FC, TCXO control
IC3	PLL synthesizer	Reference 16.8MHz, PLL lock : LD H
IC4	Amplifier	DEO
IC5	FM demodulation	Quadrature detector, 2nd mixer, OSC, IF amplifier, RSSI
IC6	D/A converter	
IC7	DC amplifier	PC/TV control
IC8	Prescaler	1/2 prescaler

DESCRIPTION OF COMPONENTS

Ref. No.	Use/Function	Operation/Condition
IC9	Shift/Store register	HNC, 8RC, 8TC, SPMUTE, RX, PA/LI, AUX5, AUX6
IC10	5V AVR	5C (TX/RX)
IC11	9V AVR	9C
IC12	8V AVR	8C
IC13	AF amplifier	
IC14	Power supply logic circuit control	
IC15	DC amplifier	APC control
IC400	Power module	
IC501	Flash ROM	
IC502	CPU	
IC503	Reset IC	Low voltage output when powering up
IC505	EEPROM	
IC507	Amplifier	MIC, AFO
IC508	Audio processor	Compander, MIC amplifier, ALC, AF filter, IDC
IC509	Analog switch	MO, DEO, EMG, MI switch
IC510	Shift/Store register	W/N, MM2, MBL, LED0, LED1, AFREG1, AFREG2, BSHIFT
IC511	DTMF decode	
IC512	5V AVR	5C (control)
IC513	Amplifier	QT/DQT decode
IC514	Amplifier	2-Tone decode
Q1	DC switch	HOR
Q2	DC switch	5S
Q3	DC switch (W/N)	Active while it is narrow
Q4	DC switch (W/N)	Active while it is wide
Q5	DC switch	HNC
Q6	DC switch	IGN
Q7	Buffer amplifier	16.8MHz x 3
Q8	Lipple filter	8CL
Q9	Buffer amplifier	PLL fin
Q10	Noise amplifier	Squelch
Q11	Charge pump	øP
Q12	Charge pump	øR
Q13	IF amplifier	49.95MHz
Q14	Buffer amplifier	Hetetodyne
Q15	Mixer	
Q16	DC switch	8R cont, active while RX
Q17	AF mute	Active while AF mute
Q18	DC switch	8R, active while RX
Q19,20	DC switch	SB switch, active when powering up

Ref. No.	Use/Function	Operation/Condition
Q21	DC switch	Active while PS voltage is more than 20V
Q22	RF amplifier	Predrive
Q23	DC switch	SB switch, active when powering up
Q24	AF mute	Active while power switch is off
Q25	RF amplifier	Drive
Q26	Inverter	Active while power switch is low
Q27	L.N.A.	
Q28	DC switch	8T, active while TX
Q29	DC switch	8T cont, active while TX
Q31	APC controller	
Q32	APC controller	DB
Q33	APC controller	Power protection
Q35	W/N switch	Active on narrow
Q36	DC switch	Power protection
Q37	AF mute switch	Inactive on mute
Q38	DC switch	5S
Q39	DC switch	Output enable
Q501	Clock switch shift	Clock shift is on while BSHIFT is H
Q502	AF mute	Active while MUTE is H
Q503	Inverter	Active while PA2 is H, active while public address
Q504	LED switch (Red)	Active while LED0 is H, active while TX
Q505,506	Key backlight switch	Active while MBL is H
Q508	LED switch (Green)	Active while LED1 is H, active while RX
Q509	MIC mute	Active while MM is H and MM2 is H

PLL/VCO (X58-4670-XX) -10 : K,M -11 : K2

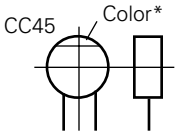
Ref. No.	Use/Function	Operation/Condition
D101	RX VCO	
D102	TX VCO	
D103	RX VCO	
D104	TX VCO	
D105	Modulation	
Q101	Oscillator	RX
Q102	Inverter	Active while ST is H
Q103	Oscillator	TX
Q104	TX/RX switch (TX)	Active while ST is H
Q105	TX/RX switch (RX)	Active while Q102 is off
Q106	Buffer amplifier	

PARTS LIST

CAPACITORS

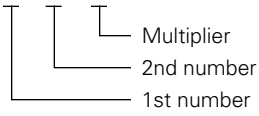
CC	45	TH	1H	220	J
1	2	3	4	5	6

1 = Type … ceramic, electrolytic, etc.
2 = Shape … round, square, ect.
3 = Temp. coefficient
4 = Voltage rating
5 = Value
6 = Tolerance



• Capacitor value

010 = 1pF
100 = 10pF
101 = 100pF
102 = 1000pF = 0.001µF
103 = 0.01µF



• Temperature coefficient

1st Word	C	L	P	R	S	T	U
Color*	Black	Red	Orange	Yellow	Green	Blue	Violet
ppm/°C	0	–80	–150	–220	–330	–470	–750

2nd Word	G	H	J	K	L
ppm/°C	±30	±60	±120	±250	±500

Example : CC45TH = –470 ± 60ppm/°C

• Tolerance (More than 10pF)

Code	C	D	G	J	K	M	X	Z	P	No code
(%)	±0.25	±0.5	±2	±5	±10	±20	+40 –20	+80 –20	+100 –0	More than 10µF – 10 ~ +50 Less than 4.7µF –10 ~ +75

(Less than 10pF)

Code	B	C	D	F	G
(pF)	±0.1	±0.25	±0.5	±1	±2

• Voltage rating

1st word \ 2nd word	A	B	C	D	E	F	G	H	J	K	V
0	1.0	1.25	1.6	2.0	2.5	3.15	4.0	5.0	6.3	8.0	–
1	10	12.5	16	20	25	31.5	40	50	63	80	35
2	100	125	160	200	250	315	400	500	630	800	–
3	1000	1250	1600	2000	2500	3150	4000	5000	6300	8000	–

• Chip capacitors

(EX) C C 7 3 F S L 1 H 0 0 0 J
1 2 3 4 5 6 7
(Chip) (CH, RH, UJ, SL)

(EX) C K 7 3 F F 1 H 0 0 0 Z
1 2 3 4 5 6 7
(Chip) (B, F)

Refer to the table above.
1 = Type
2 = Shape
3 = Dimension
4 = Temp. coefficient
5 = Voltage rating
6 = Value
7 = Tolerance

Dimension (Chip capacitors)

Dimension code	L	W	T
Empty	5.6 ± 0.5	5.0 ± 0.5	Less than 2.0
A	4.5 ± 0.5	3.2 ± 0.4	Less than 2.0
B	4.5 ± 0.5	2.0 ± 0.3	Less than 2.0
C	4.5 ± 0.5	1.25 ± 0.2	Less than 1.25
D	3.2 ± 0.4	2.5 ± 0.3	Less than 1.5
E	3.2 ± 0.2	1.6 ± 0.2	Less than 1.25
F	2.0 ± 0.3	1.25 ± 0.2	Less than 1.25
G	1.6 ± 0.2	0.8 ± 0.2	Less than 1.0
H	1.0 ± 0.05	0.5 ± 0.05	0.5 ± 0.05

RESISTORS

• Chip resistor (Carbon)

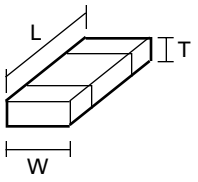
(EX) R D 7 3 E B 2 B 0 0 0 J
1 2 3 4 5 6 7
(Chip) (B,F)

• Carbon resistor (Normal type)

(EX) R D 1 4 B B 2 C 0 0 0 J
1 2 3 4 5 6 7

1 = Type … ceramic, electrolytic, etc.
2 = Shape … round, square, ect.
3 = Dimension
4 = Temp. coefficient
5 = Voltage rating
6 = Value
7 = Tolerance

Dimension



Dimension (Chip resistor)

Dimension code	L	W	T
E	3.2 ± 0.2	1.6 ± 0.2	1.0
F	2.0 ± 0.3	1.25 ± 0.2	1.0
G	1.6 ± 0.2	0.8 ± 0.2	0.5 ± 0.1
H	1.0 ± 0.05	0.5 ± 0.05	0.35 ± 0.05

Rating wattage

Code	Wattage	Code	Wattage	Code	Wattage
1J	1/16W	2C	1/6W	3A	1W
2A	1/10W	2E	1/4W	3D	2W
2B	1/8W	2H	1/2W

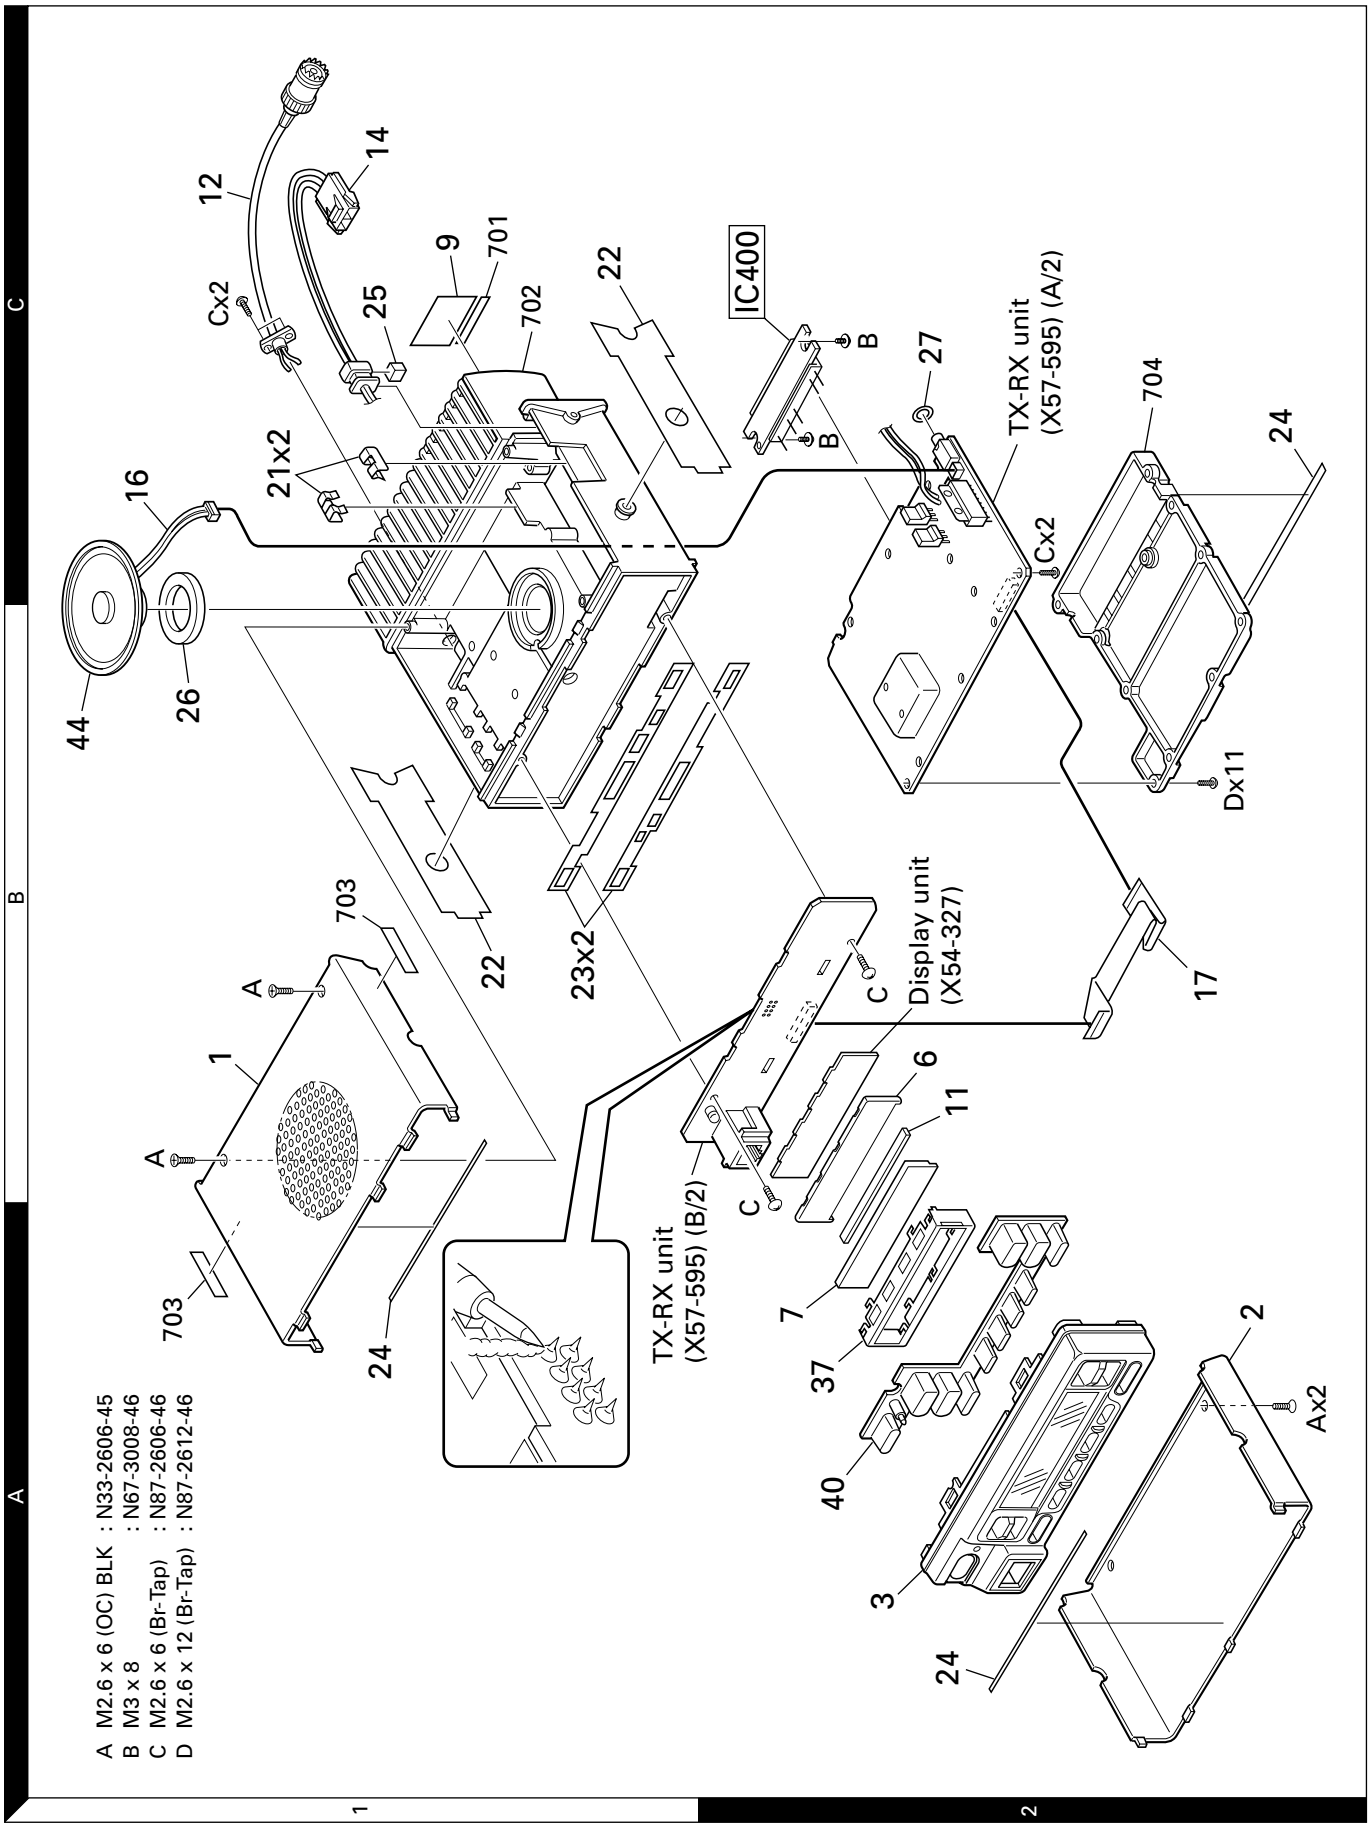
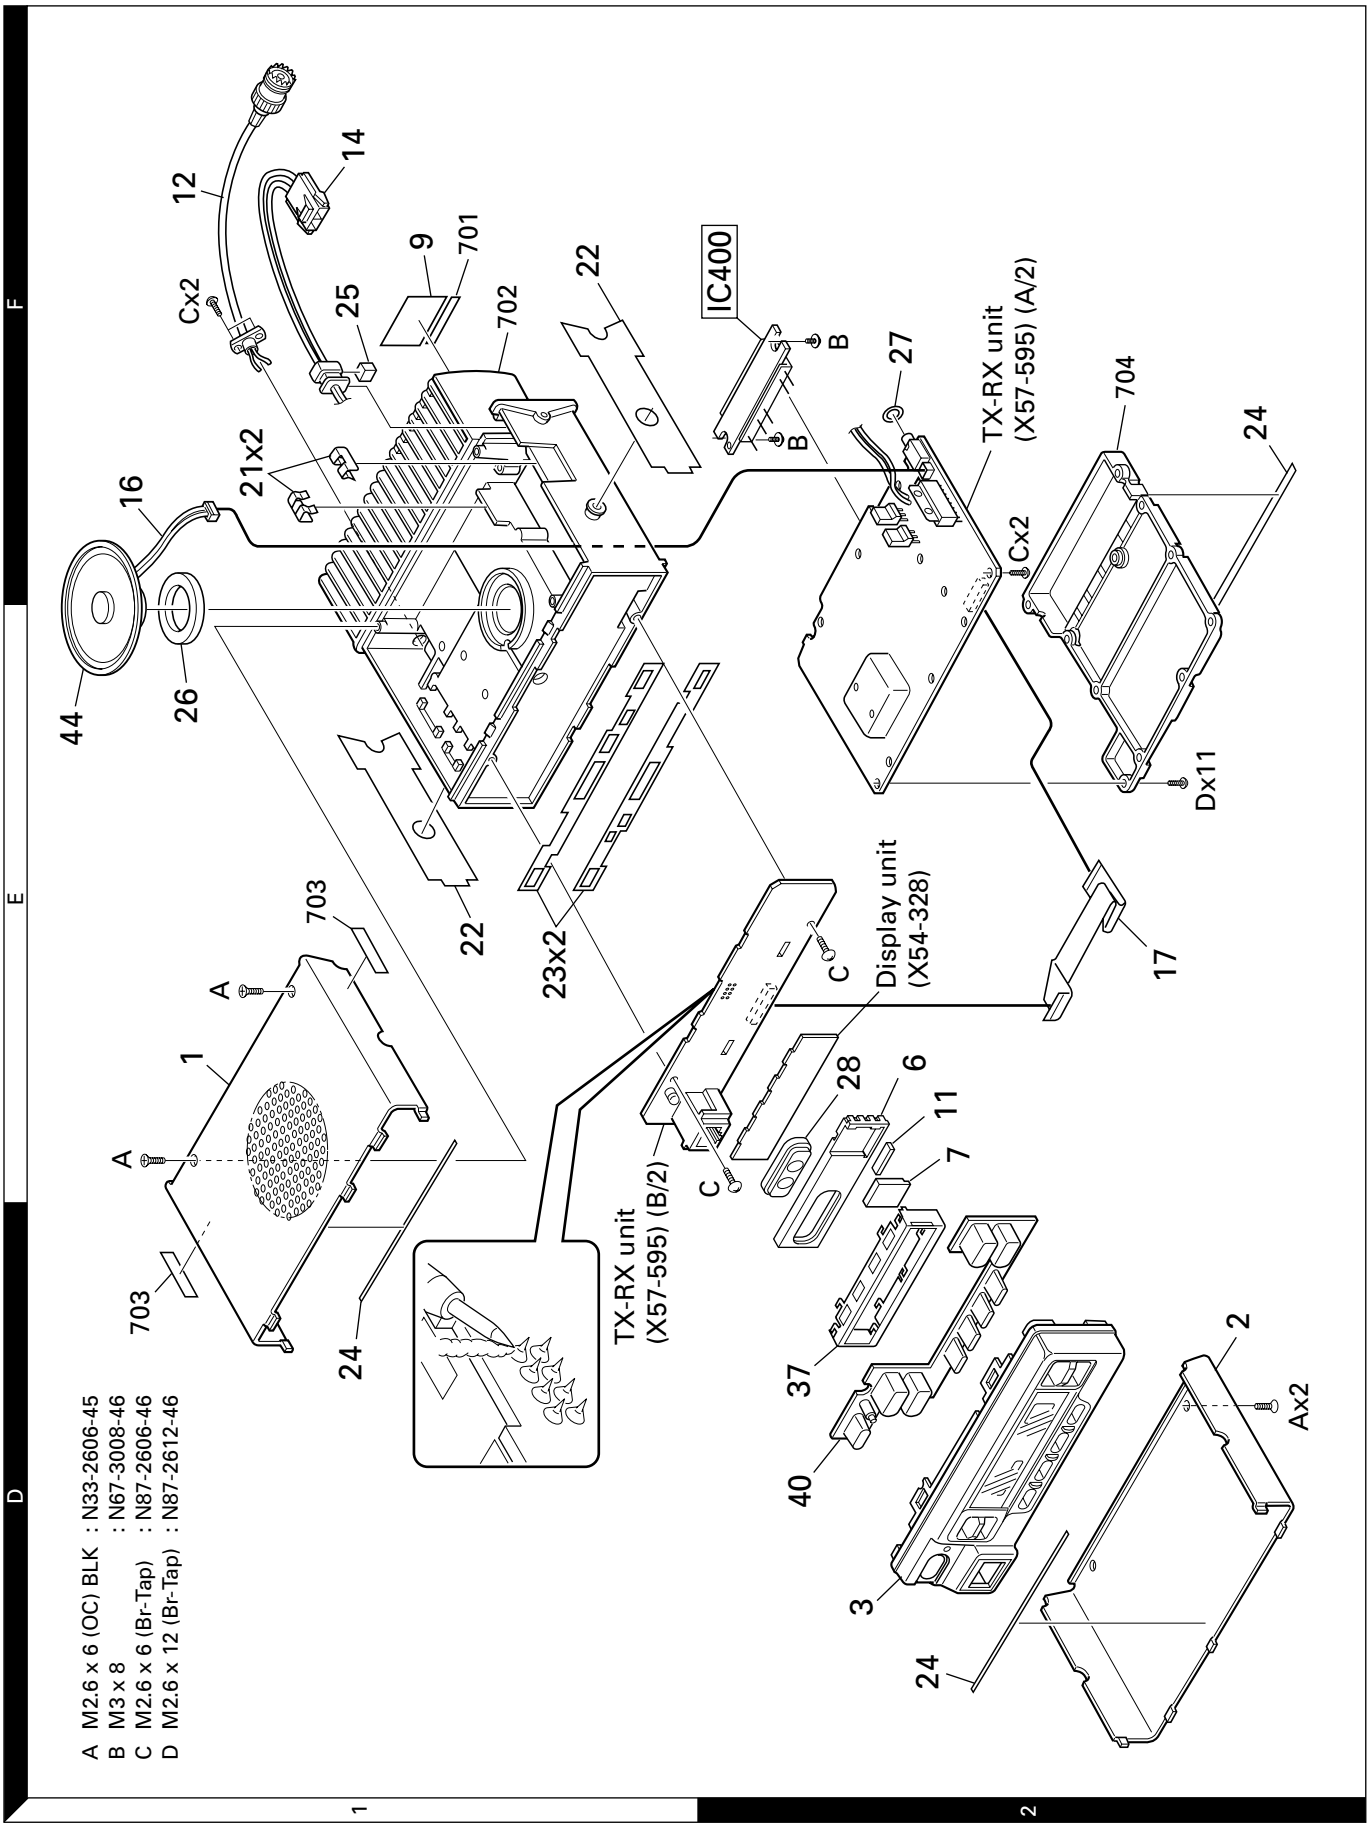
EXPLODED VIEW (TK-760G)



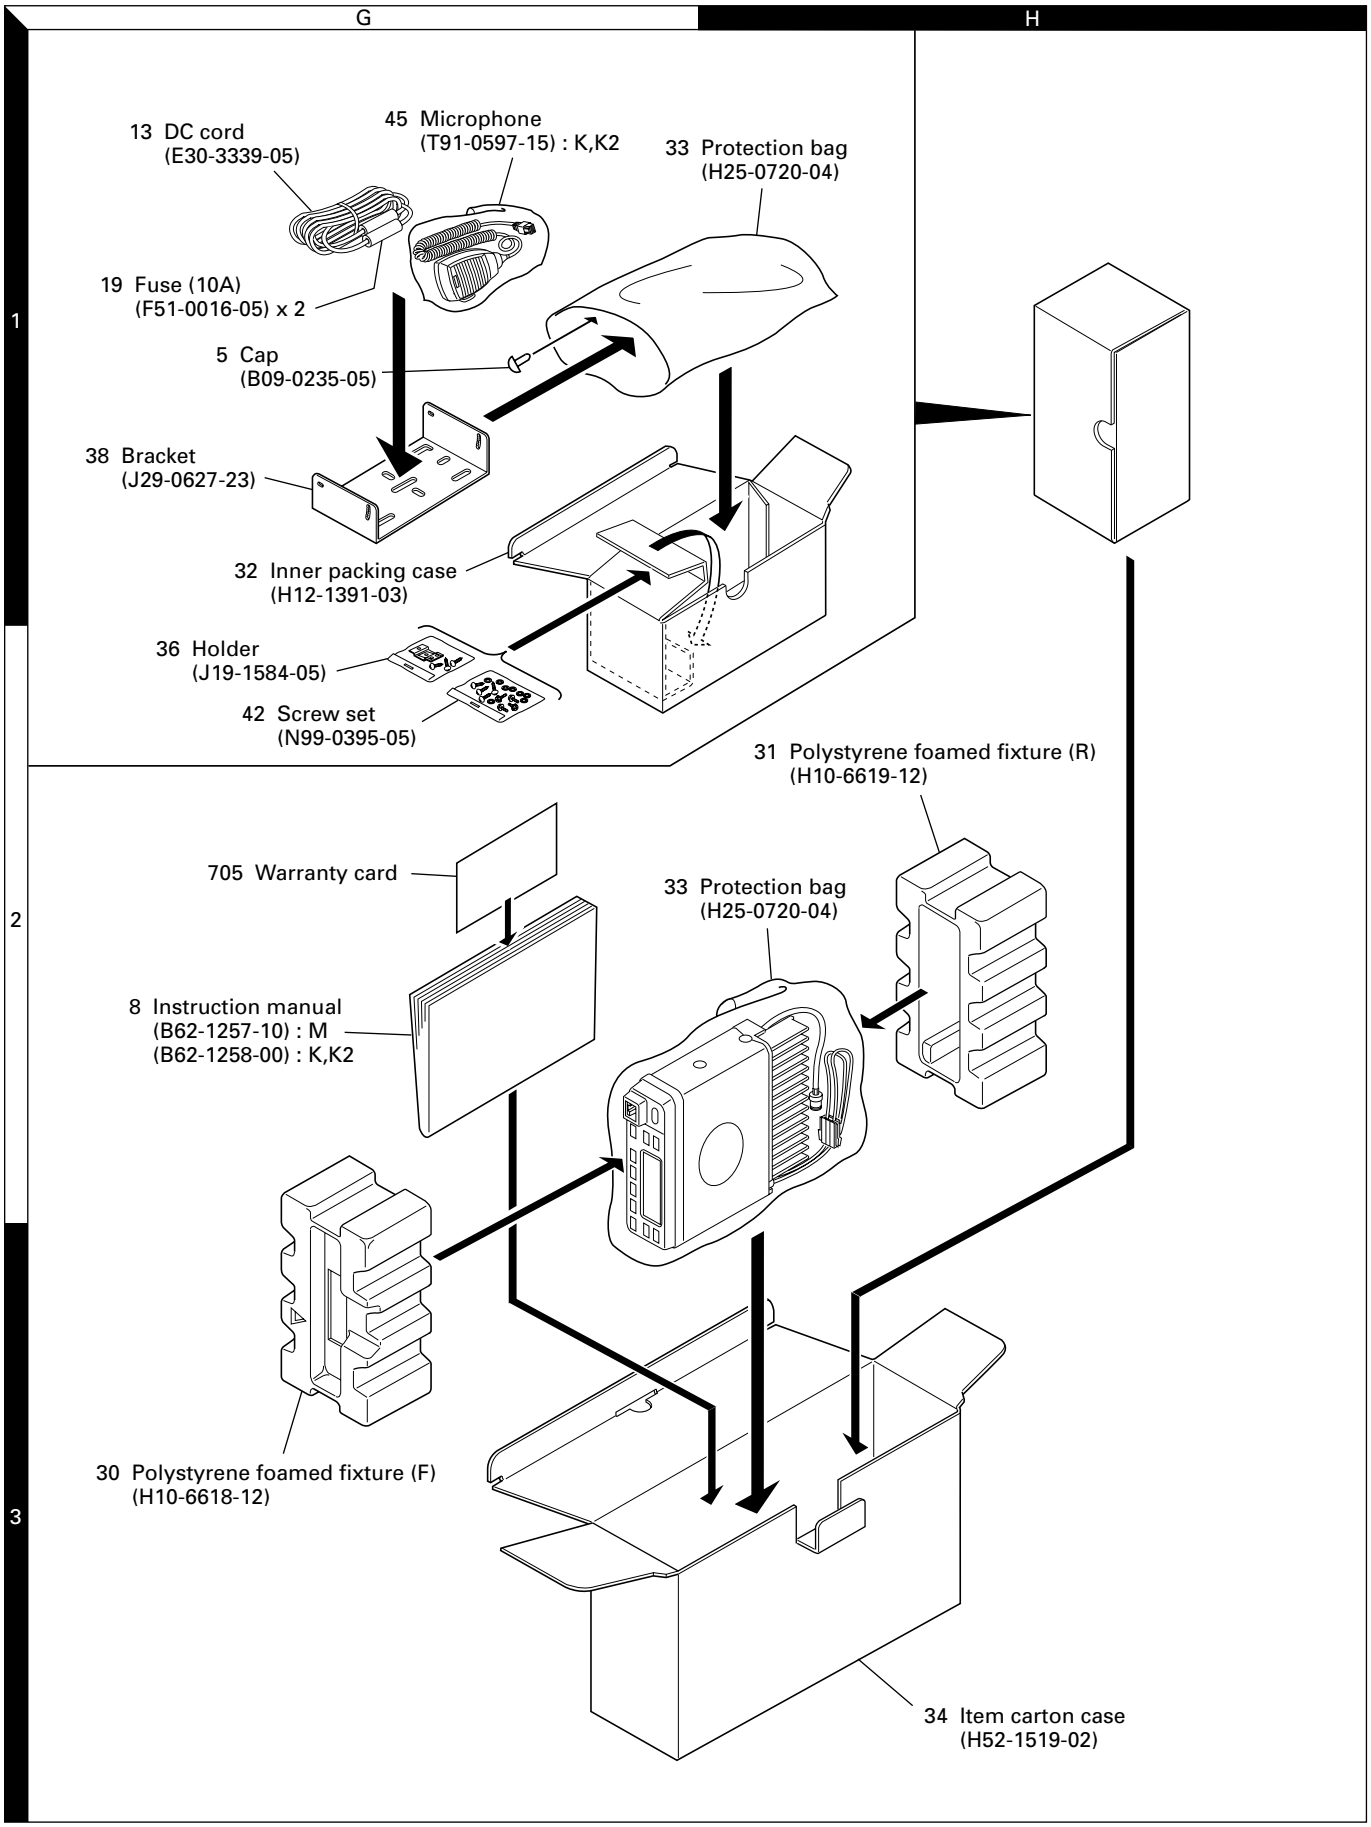
Parts with the exploded numbers larger than 700 are not supplied.

EXPLODED VIEW (TK-762G)



Parts with the exploded numbers larger than 700 are not supplied.

PACKING



Parts with the exploded numbers larger than 700 are not supplied.

ADJUSTMENT

Test Mode (TK-760G Only)

■ Test Mode Operating Features

This transceiver has a test mode. ***To enter test mode, press [SCN] key and turn power on. Hold [SCN] key until test channel No. and test signalling No. appears on LCD.*** Test mode can be inhibited by programming. To exit test mode, switch the power on again. The following functions are available in test mode.

- **Controls**

[PTT]	Used when making a transmission.
[MON]	Monitor on and off.
[SCN]	Sets to the tuning mode.
[A]	Function on.
[D/A]	RF power high and low.
[▼]	Changes signalling.
[▲]	Changes wide and narrow
[CH▲/▼]	Changes channel.
[Volume▲/▼]	Volume up/down.

- **LCD indicator**

"SCN"	Unused.
"AUX"	Lights at RF power low.
"MON"	Lights at monitor on.
"Right side dot"	Lights at narrow.

- **LED indicator**

Red LED	Lights during transmission.
Green LED	Lights when there is a carrier.

■ Frequency and Signalling

The set has been adjusted for the frequencies shown in the following table. When required, re-adjust them following the adjustment procedure to obtain the frequencies you want in actual operation.

- **Frequency (MHz)**

Channel No.	TK-760G/762G (K)		TK-760G/762G (K2)		TK-760G (M)	
	RX	TX	RX	TX	RX	TX
1 (Center)	161.050	161.100	149.050	149.100	160.050	160.100
2 (Low)	148.050	148.100	136.050	136.100	146.050	146.100
3 (High)	173.950	173.900	161.950	161.900	173.950	173.900
4	161.000	161.000	149.000	149.000	160.000	160.000
5	161.200	161.200	149.200	149.200	160.200	160.200
6	161.400	161.400	149.400	149.400	160.400	160.400
7~16	–	–	–	–	–	–

- **Signalling**

Signalling No.	RX	TX
1	None	None
2	None	100Hz square
3	QT 67.0Hz	QT 67.0Hz
4	QT 151.4Hz	QT 151.4Hz
5	QT 210.7Hz	QT 210.7Hz
6	QT 250.3Hz	QT 250.3Hz
7	DQT D023N	DQT D023N
8	DQT D754I	DQT D754I
9	DTMF DEC, (159D)	DTMF ENC, (159D)
10	None	DTMF tone (9)
11	2-tone 321.7/928.1Hz	None
12	Single tone 1200Hz	Single tone 1200Hz

- **Preparations for tuning the transceiver**

Before attempting to tune the transceiver, connect the unit to a suitable power supply.

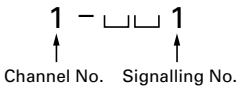
Whenever the transmitter is turned, the unit must be connected to a suitable dummy load (i.e. power meter).

The speaker output connector must be terminated with a 4Ω dummy load and connected to an AC voltmeter and an audio distortion meter or a SINAD measurement meter at all times during tuning.

- **Transceiver tuning**
  (To place transceiver in tuning mode)

Channel appears on LCD. Set channel according to tuning requirements.

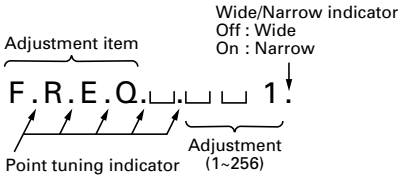
LCD display (Test mode)



Press [SCN], now in tuning mode. Use [D/A] button to write tuning data through tuning modes, and [CH▲/▼] to adjust tuning requirements (1 to 256 appears on LCD).

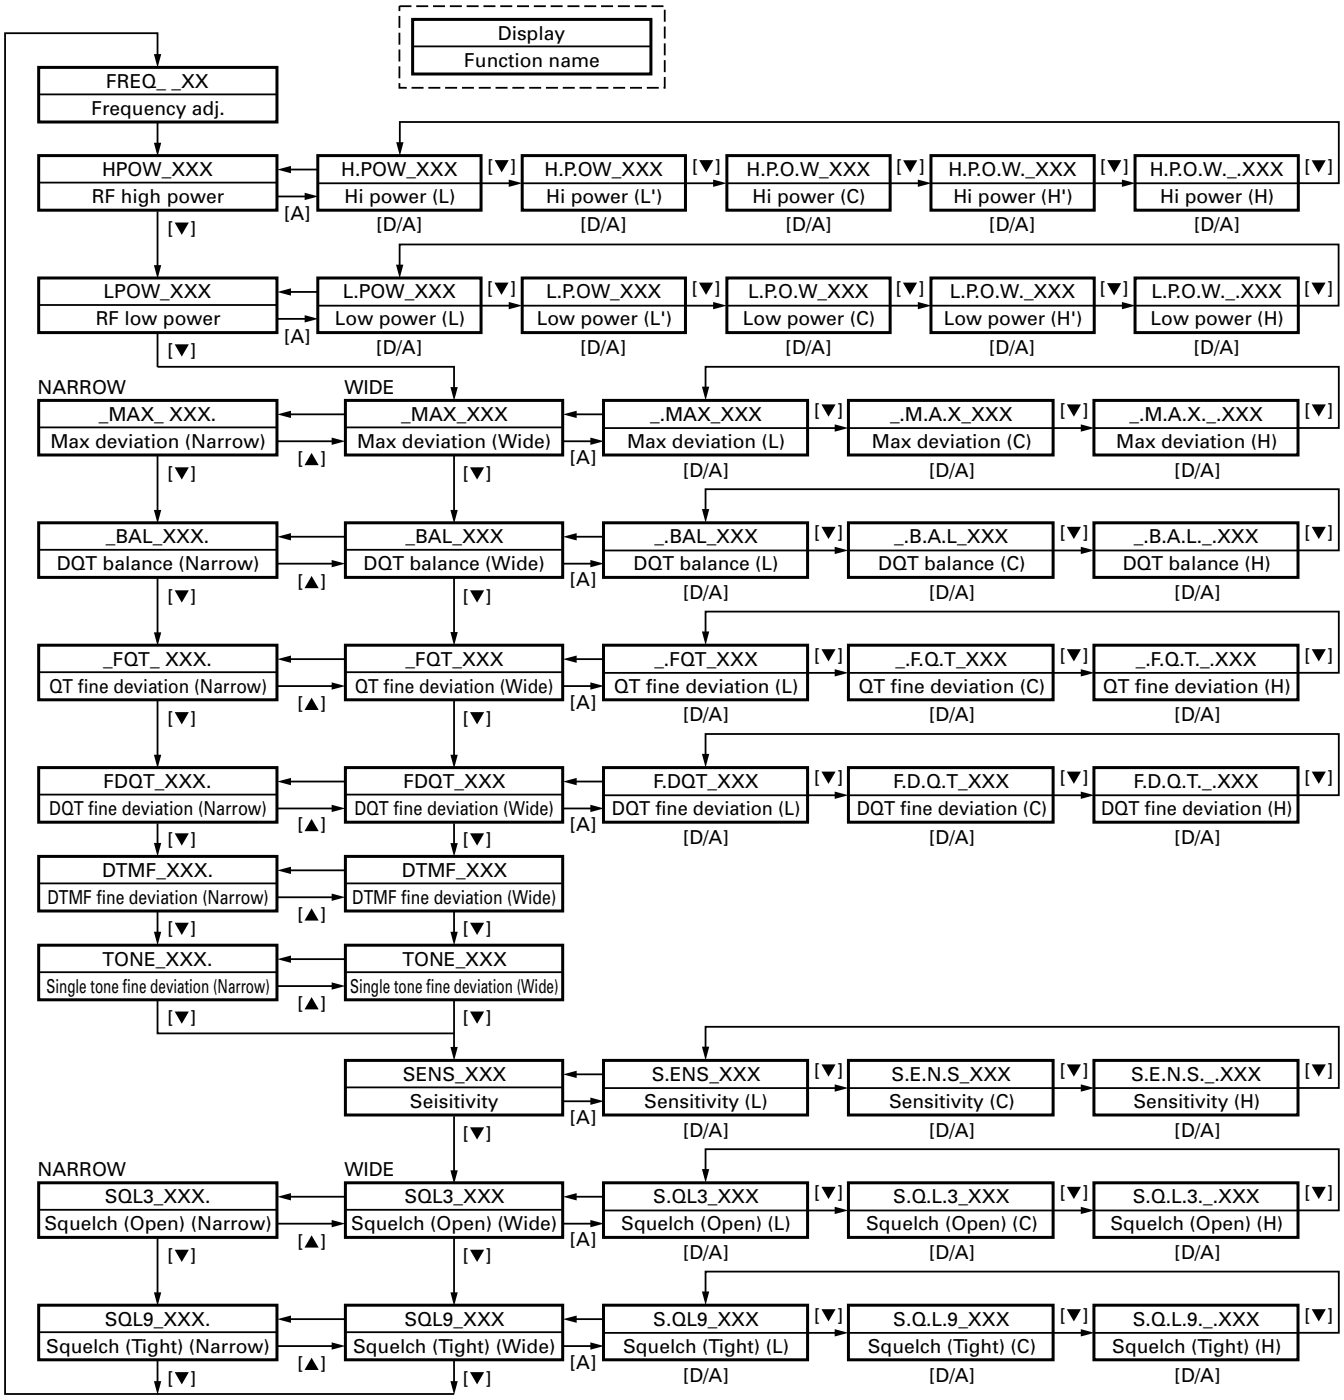
Use [▼] button to select the adjustment item through tuning modes. Use [A] button to adjust 3-point or 5-point tuning, and use [▲] button to switch between wide/narrow.

LCD display (Tuning mode)



ADJUSTMENT

■ Tuning Mode



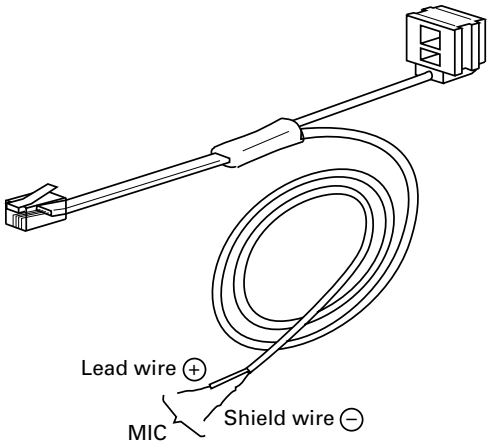
ADJUSTMENT

Test Equipment Required for Alignment

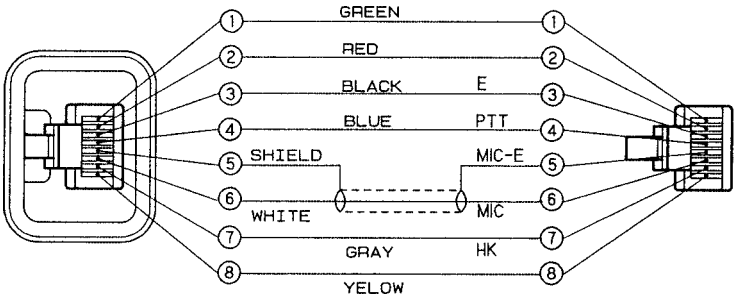
Test Equipment	Major Specifications	
1. Standard Signal Generator (SSG)	Frequency Range Modulation Output	136 to 174MHz Frequency modulation and external modulation –127dBm/0.1μV to greater than –7dBm/100mV
2. Power Meter	Input Impedance Operation Frequency Measurement Capability	50Ω 136 to 174MHz or more Vicinity of 100W
3. Deviation Meter	Frequency Range	136 to 174MHz
4. Digital Volt Meter (DVM)	Measuring Range Accuracy	1 to 20V DC High input impedance for minimum circuit loading
5. Oscilloscope		DC through 30MHz
6. High Sensitivity Frequency Counter	Frequency Range Frequency Stability	10Hz to 1000MHz 0.2ppm or less
7. Ammeter		20A
8. AF Volt Meter (AF VTVM)	Frequency Range Voltage Range	50Hz to 10kHz 1mV to 10V
9. Audio Generator (AG)	Frequency Range Output	20Hz to 20kHz or more 0 to 1V
10. Distortion Meter	Capability Input Level	3% or less at 1kHz 50mV to 10Vrms
11. 4Ω Dummy Load		Approx. 4Ω, 10W or more
12. Regulated Power Supply		13.6V, approx. 20A (adjustable from 9 to 20V) Useful if ammeter requipped

Tuning cable (E30-3383-05)

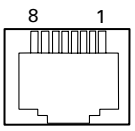
Adapter cable (E30-3383-05) is required for injecting an audio if PC tuning is used.
See "PC Mode" section for the connection.



Test cable for microphone input (E30-3360-08)



MIC connector (Front view)

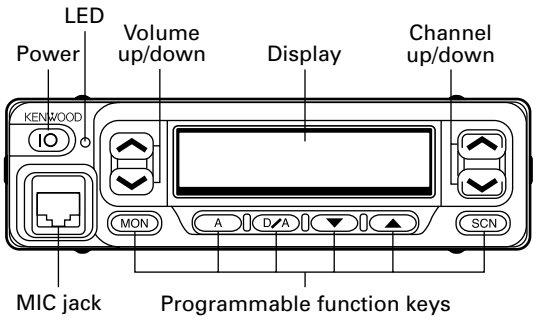


1 : BLC
2 : PSB
3 : E
4 : PTT
5 : ME
6 : MIC
7 : HOOK
8 : CM

ADJUSTMENT

Adjustment Location

■ **Switch (TK-760G)**



■ **Note**

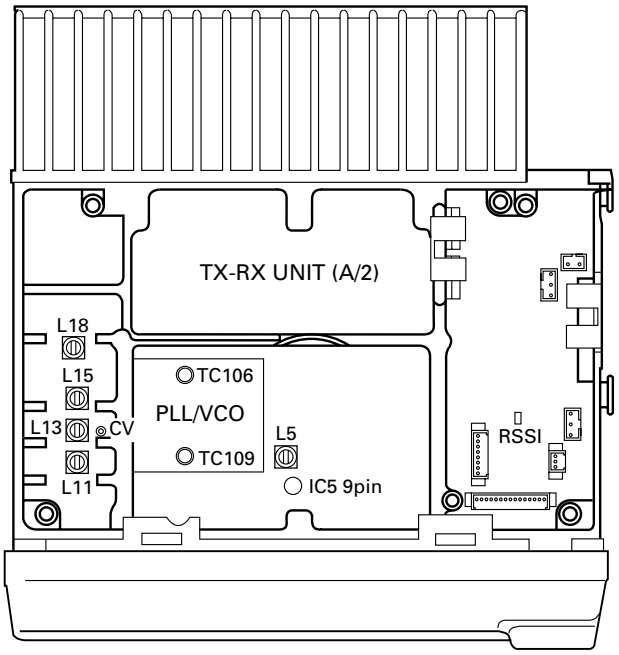
• **Flash memory**

The firmware program (User mode, Test mode, Tuning mode, etc.) and the data programmed by the FPU (KPG-56D) for the flash memory, is stored in memory. When parts are changed, program the data again.

• **EEPROM**

The tuning data (Deviation, Squelch, etc.) for the EEPROM, is stored in memory. When parts are changed, readjust the transceiver.

■ **Adjustment Point**



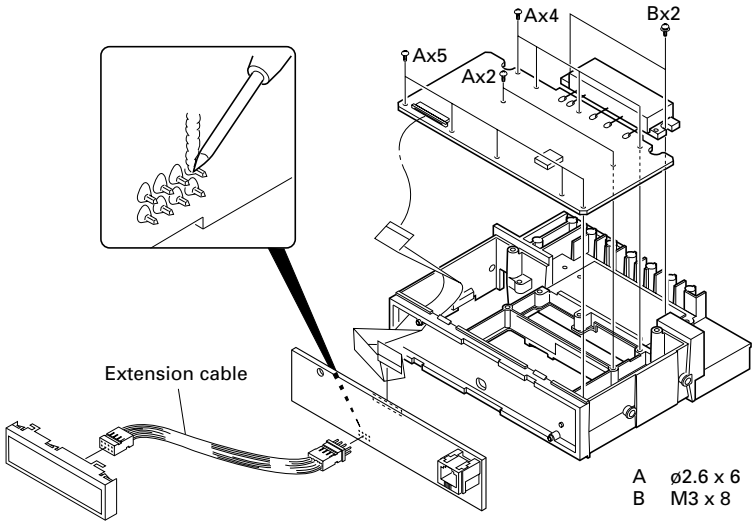
■ **Repair Jig**

• **Chassis**

Use jig (Part No. : A10-4010-02) for repairing the TK-760G/762G. The jig facilitates the voltage check when the voltage on the component side TX-RX unit is checked during repairs.

• **Extension cable**

Part No. : E30-3404-05



ADJUSTMENT

Common Section

Since the TK-762G cannot be tuned from the panel, the FPU (KPG-56D) should be used for adjustment.

Item	Condition	Measurement			Adjustment			Specifications/Remarks

• Narrow	4) "SQL3∗∗∗." Adjust [∗∗∗] SSG freq' : 161.050MHz **K** : 149.050MHz **K2** : 160.050MHz **M**							
4. Squelch 9 • Wide	1) Set test mode Select "SQL9" in tuning mode. "S.QL9" Adjust [∗∗∗] SSG freq' : 148.050MHz **K** : 136.050MHz **K2** : 146.050MHz **M** SSG output : –114dBm/0.44μV SSG MOD : 3kHz (Wide) 1.5kHz (Narrow)							
	2) "S.Q.L.9" Adjust [∗∗∗] SSG freq' : 161.050MHz **K** : 149.050MHz **K2** : 160.050MHz **M**							
	3) "S.Q.L.9._." Adjust [∗∗∗] SSG freq' : 173.950MHz **K,M** : 161.950MHz **K2**							
• Narrow	4) "SQL9∗∗∗." Adjust [∗∗∗] SSG freq' : 161.050MHz **K** : 149.050MHz **K2** : 160.050MHz **M**							
5. Squelch check	1) Set test mode CH : CH1 - Sig1~CH3 - Sig1 SSG output : –118dBm/0.28μV						Check	Squelch must be opened. (Wide/Narrow)
	2) SSG output : OFF							Squelch must be closed. (Wide/Narrow)

ADJUSTMENT

Item	Condition	Measurement			Adjustment			Specifications/Remarks
		Test-equipment	Unit	Terminal	Unit	Parts	Method	
6. QT check	1) Set test mode CH : CH1 - Sig4 SSG MOD INT : 3kHz (Wide), 1.5kHz (Narrow) EXT : 151.4Hz SSG system MOD DEV : ±3.75kHz (Wide), ±1.85kHz (Narrow) SSG output : 10dB SINAD level	SSG AF VTVM Distortion meter Oscilloscope AG	Rear panel	ANT ACC (EXT.SP)				
	2) CH : CH1 - Sig3 CH1 - Sig5 CH1 - Sig6						Check	Squelch must be opened.

Transmitter Section

Item	Condition	Measurement			Adjustment			Specifications/Remarks
		Test-equipment	Unit	Terminal	Unit	Parts	Method	
1. Frequency	1) Set test mode Select "FREQ" in tuning mode. PTT : ON Adjust [_**]	Power meter F. counter	Rear panel	ANT	Front panel	CH∧/∨	Check	161.100MHz±50Hz **K** 149.100MHz±50Hz **K2** 160.100MHz±50Hz **M**
2. Power output	1) Maximum power Set test mode Select "HPOW" in tuning mode. "H.POW" Adjust [256] PTT : ON						Check	More than 28.0W
3. High power	1) Set test mode Select "HPOW" in tuning mode. "H.POW" PTT : ON Adjust [***]						25.0W	±1.0W
	2) "H.P.OW" PTT : ON Adjust [***]							
	3) "H.P.O.W" PTT : ON Adjust [***]							
	4) "H.P.O.W." PTT : ON Adjust [***]							
	5) "H.P.O.W._." PTT : ON Adjust [***]							
4. Low power	1) Set test mode Select "LPOW" in tuning mode. "L.POW" PTT : ON Adjust [***]	Power mete					5.0W	±0.5W
	2) "L.P.OW" PTT : ON Adjust [***]							

ADJUSTMENT

Item	Condition	Measurement			Adjustment			Specifications/Remarks
		Test-equipment	Unit	Terminal	Unit	Parts	Method	
	3) "L.P.O.W" PTT : ON Adjust [∗∗∗]	Power meter	Rear panel	ANT	Front panel	CH∧/∨	5.0W	±0.5W
	4) "L.P.O.W." PTT : ON Adjust [∗∗∗]							
	5) "L.P.O.W._." PTT : ON Adjust [∗∗∗]							
5. Power check	1) Set test mode CH : CH1 - Sig1 CH2 - Sig1 CH3 - Sig1 PTT : ON	Power meter Ammeter	Rear panel	ANT DC IN			Check	25W±1W, 8A or less
6. Modulation balanced • Wide	1) Set test mode MIC input : OFF Select "BAL" in tuning mode. "_.BAL" Deviation meter filter LPF : 3kHz, HPF : OFF De-emphasis : OFF PTT : ON Adjust [∗∗∗]	Power meter Deviation meter Oscilloscope AF VTVM AG	Rear panel Front panel	ANT MIC	Front panel	CH∧/∨	Make the de-modulation waveform neat.	(Wide/Narrow) 	2) "_.B.A.L" PTT : ON Adjust [∗∗∗]							
	3) "_.B.A.L._." PTT : ON Adjust [∗∗∗]							
• Narrow	4) "_BAL∗∗∗." PTT : ON Adjust [∗∗∗]							
7. Maximum deviation • Wide	1) Set test mode Connect AG to the MIC terminal. Select "MAX" in tuning mode. "_.MAX" AG : 1kHz/50mV Deviation meter filter LPF : 15kHz, HPF : OFF De-emphasis : OFF PTT : ON Adjust [∗∗∗]						3.95kHz (Wide) 1.95kHz (Narrow) (According to the larger +, –)	±50Hz (Wide/Narrow)
	2) "_.M.A.X" PTT : ON Adjust [∗∗∗]							
	3) "_.M.A.X._." PTT : ON Adjust [∗∗∗]							
• Narrow	4) "_MAX∗∗∗." PTT : ON Adjust [∗∗∗]							

ADJUSTMENT

Item	Condition	Measurement			Adjustment			Specifications/Remarks
		Test-equipment	Unit	Terminal	Unit	Parts	Method	
8. MIC seisitivity check	1) Set test mode CH : CH1 - Sig1 AG : 1kHz/5mV PTT : ON Adjust [∗∗∗]	Power meter Deviation meter Oscilloscope AF VTVM AG	Rear panel Front panel	ANT MIC				Check ±3kHz±0.2kHz (Wide) ±1.5kHz±0.05kHz (Narrow)
9. QT deviation • Wide	1) Set test mode Select "FQT" in tuning mode. "_.FQT" Deviation meter filter LPF : 3kHz, HPF : OFF PTT : ON Adjust [∗∗∗]				Front panel	CH∧/∨	0.75kHz	±50Hz (Wide/Narrow)
	2) "_.F.Q.T" PTT : ON Adjust [∗∗∗]							
	3) "_.F.Q.T._." PTT : ON Adjust [∗∗∗]							
• Narrow	4) "_FQT∗∗∗." PTT : ON Adjust [∗∗∗]						0.35kHz	
10. DQT deviation • Wide	1) Set test mode Select "FDQT" in tuning mode. "F.DQT" Deviation meter filter LPF : 3kHz, HPF : OFF PTT : ON Adjust [∗∗∗]				Front panel	CH∧/∨	0.75kHz	±50Hz (Wide/Narrow)
	2) "F.D.Q.T" PTT : ON Adjust [∗∗∗]							
	3) "F.D.Q.T._." PTT : ON Adjust [∗∗∗]							
• Narrow	4) "FDQT∗∗∗." PTT : ON Adjust [∗∗∗]						0.35kHz	
11. DTMF deviation • Wide	1) Set test mode Select "DTMF" in tuning mode. Deviation meter filter LPF : 15kHz, HPF : OFF PTT : ON Adjust [∗∗∗]				Front panel	CH∧/∨	3.0kHz	±0.2kHz
• Narrow	2) "DTMF∗∗∗." PTT : ON Adjust [∗∗∗]						1.5kHz	±0.1kHz
12. TONE deviation • Wide	1) Set test mode Select "TONE" in tuning mode. Deviation meter filter LPF : 15kHz, HPF : OFF PTT : ON Adjust [∗∗∗]				Front panel	CH∧/∨	3.0kHz	±0.1kHz (Wide/Narrow)
• Narrow	2) "TONE∗∗∗." PTT : ON Adjust [∗∗∗]						1.5kHz

TERMINAL FUNCTION

CN1 (TX-RX Unit)

Pin No.	Name	Function
1	8C	DC 8V output.
2	5S	DC 5V output.
3	AUX5	SMRD : Reset output. *1
4	AUX6	5SC : 5S control (Cannot use). *1
5	NC	Non-connection
6	AUX3	SMCK : Clock pulse output. *1
		SQ : Squelch detect output. *2
7	AUX1	SMRQ : Ack Req input. *1
		PTT : External PTT input. *2
8	AUX4	TXD : Serial control data output. *1
9	AUX2	RXD : Serial control data input. *1
		DTC : Data channel control/External hook input.
		CHDATA : Channel control serial data input.
10	ALT	Alert tone input.
11	AFO	Receiver audio signal output.
12	AFI	Reseiver audio signal input.
13	MII	Transmit audio signal input.
14	MIO	Transmit audio signal output.
15	GND	Ground

.

CN2 (TX-RX Unit) ⟷ CN501 (Control Unit)

Pin No.	Name	Function
1	SFTDT	Serial data for IC9 (Shift register).
2	UL	Lock detect.
3	PLST	Strobe signal for IC3 (PLL IC).
4	PLDT	Serial data for IC3 (PLL IC).
5	PLCK	Clock pulse for IC3 (PLL IC).
6	RSSI	Receive signal strength indicator.
7	ASQ	Analog squelch.
8	TO	Transmit sub-tone signal output.
9	SFTST	Strobe signal for IC9 (Shift register).
10	DAST	Strobe signal for IC6 (Shift register).
11	CNTDT	Control serial data for IC6.
12	CNTCK	Control clock pulse for IC6.
13	W/N	Change signal of wide or narrow.
14	CTO	Received sub-tone signal.
15	DTMFIO	DTMF signal.
16	MO	Modulation signal.
17	AFO	Receiver audio signal.
18	SB	Switched B.
19	SB	Switched B.
20	PSW	Power switch.
21	AUX3	Optional unit control signal.
22	AUX1	Optional unit control signal.
23	AUX4	Optional unit control singal.
24	AUX2	Optional unit control signal.
25	EMG/TXS	Foot switch input signal.
26	8C	DC 8V.
27	MM	MIC mute.
28	MI	External MIC input signal.
29	ME	MIC ground.
30	ALT	Alert tone signal.
31	DEO	Receiver detector output.
32	MII	Transmit audio signal input.
33	MIO	Transmit audio signal output.
34	GND	Grond.

*1 : SmarTrunk OMNI mode
*2 : MDT mode
*3 : Emergency mode

CN3 (TX-RX Unit)

Pin No.	Name	Function
1	HOR	Horn alert/call output.
2	E	Ground.
3	SB	Switched B+, DC 13.6V output, Maximum 1A.

CN4 (TX-RX Unit)

Pin No.	Name	Function
1	DEO	Receiver detector output. Level : 0.5Vrms (Atandard modulation)
2	DTC	Data channel control/External hook input.
3	IGN	Ignition sense input.
4	DI	Data modulation input.
5	ME	External microphone ground.
6	MI	EXternal microphone input.
7	PTT	External PTT input, active low.
8	SQ	Squelch detect output.

CN5 (TX-RX Unit)

Pin No.	Name	Function
1	AM	Speaker mute input, active high.
2	MM	MIC mute input, active high
3	EMG/TXS	EMG : Foot switch input, active low. *3

CN7 (TX-RX Unit)

Pin No.	Name	Function
1	PA/LI	Relay for PA function KAP-1 control. "H" : PA/LI on, "L" : PA/LI off
2	SPO	Audio signal output to KAP-1
3	SPI	Audio signal inpt from KAP-1

CN8 (TX-RX Unit)

Pin No.	Name	Function
1	SP	Audio signal output to internal/external speaker.
2	E	Ground

J501 (Control Unit)

Pin No.	Name	Function
1	MBL	MIC backlight control.
2	PSB	13.6V.
3	GND	Ground.
4	PTT/TXD	PTT.
5	ME	MIC ground.
6	MIC	MIC signal input.
7	HOOK/RXD	Hook detection
8	CM	MIC data detection.

CN101 (PLL/VCO) ⟷ TX-RX Unit

Pin No.	Name	Function
1	CV	Control voltage input.
2	MD	Modulation input.
3	8CL	8V input.
4	E	Ground.
5	HT	Signal output.
6	RX (ST)	Switched transmit input. H : Transmit

SPECIFICATIONS

GENERAL

Frequency Range	K : 148 to 174MHz K2 : 136 to 162MHz M : 146 to 174MHz
Number of Channels	TK-762G : Maximum 8 channels TK-760G : Maximum 128 channels
Number of Groups	TK-760G : Maximum 128 groups
Channel Spacing	Wide : 25, 30kHz Narrow : 12.5, 15kHz
PLL Channel Stepping	2.5, 3.75, 5, 6.25, 7.5kHz
Operating Voltage	13.6V DC ±15%
Current Drain	Less than 0.4A on standby Less than 1.0A on receive Less than 8.0A on transmit
Operating Temperature Range	–30°C to +60°C (–22°F to +140°F)
Dimensions & Weight	140 (5-33/64) W x 40 (1-37/64) H x 145 (5-45/64) D mm (inch), 940g (2.07 lbs)
Channel Frequency Spread	K : 26MHz M : 28MHz

RECEIVER (Measurements made per EIA standard EIA/TIA-204-D)

Sensitivity (12dB SINAD)	Wide : 0.25µV Narrow : 0.33µV
Selectivity	Wide : 85dB Narrow : 75dB
Intermodulation	Wide : 75dB Narrow : 65dB
Spurious Responce	90dB
Audio Power Output	4.0W
Frequency Stability	±2.5ppm

TRANSMITTER (Measurements made per EIA standard EIA-152-C)

RF Power Output	25W
Spurious and Harmonics	70dB
Modulation	Wide : 16K0F3E Narrow : 11K0F3E
FM Noise	Wide : 50dB Narrow : 45dB
Audio Distortion	Less than 3%
Frequency Stability	±2.5ppm
