

# CENTER INSULATOR

Model C-1C

- For Multi-Band Doublets
- Molded from high impact ABS plastic
- Fully weatherproof/silicone insulated
- Stainless Steel Hardware
- Built in SO-239 Connector

**hy-gain.**

## Mounting Instructions

The C-1C Center Insulator allows the antenna to be supported either by the antenna itself or to be suspended from a support. When supporting the antenna by the center insulator, do not let the insulator contact any of the support structure.

Refer to your antenna instruction manual for installation details.

**CAUTION:** When supporting the antenna by the ends only, do not try to take all sag out of the elements. This will cause stress to be built up and cause failure of the antenna. Several feet of sag in the center will do no harm, either electrically or mechanically.

Specifications: Maximum Power..... 1Kw average/2 Kw P.E.P.  
Frequency range..... 1.8 to 30 MHz  
Feedpoint..... SO-239
