

SECTION 5. ADJUSTMENT AND MAINTENANCE

Adjustment

Your AT-200 was adjusted completely at the factory. The inside semi-fixed controls VR1 through VR3 are for precisely adjusting the meter circuit. Do not touch them. Should your AT-200 need adjustment and service, please consult your nearest KENWOOD's authorized service shop.

Maintenance

1. To remove the casing

Upper case cover: Remove the two screws holding the cover on the top and the six screws on both sides. Lift it up for removal.

Lower case cover: Do not remove the lower case cover as your AT-200 is of chassisless construction.

2. To install the extension feet (Figure 12)

Installing the extension feet raises the front side up around 15 mm, inclining the panel surface forward.
